17. Opening on 6m

Yahoo group: 6meter (2000 — 2003)
Date: 2001-12-09 17:37:46 UTC
From: John Hoaglun
Topic: 17 Message: 17

I am hearing a pile up at 50.130. I can't hear the otherside of the pileup yet.... But I can hear enough of it in EN35 to that things are opening up a bit.

I am working the antenna right now to figure out who it is.

A friend of mine, N0JVT, uses a Comet GP-15 indoors with good results.
The antenna is only 7'11" tall and just sits in the corner of his
room.

Good luck!

For SSB work a 6 meter Halo from m2 would take up little space and would not be easy seen if mounted low enough. I've never used a halo but I've heard great reports on them.

33. Countries Worked

Yahoo group: 6meter (2000 — 2003)
Date: 2001-12-14 11:19:37 UTC
From: Jamie R. Dean
Topic: 33 Message: 33

Hi all,
I'm sure all of us on the group would love to hear some DX stories, like any hard to get grids you've been working over the past few weeks, far away countries or even the far away states that you have got. As for me It's been better then usaual. I've finally work Alaska on 11-12-2001 and got to work my first Europe this week. So far this week I've work Scotland, Italy, Greenland, Ecuador and Slovenia. And to say I'm not proud of these contacts I would be lieing. My station is a Icom IC-706mkIIg 100watts to a 3 element Cushcraft 6 meter beam at 35ft.
Well that's all from me. Do let us know where you've been working.

73's and good DXing,

From: James Carlin
Topic: 34 Message: 34

Best 6 meter contact I have made (so far) is some station in north New York State (I am in Miami Florida), I am also using an Icom 706 MKIIG, but my antenna is a home made copper pipe J pole (total cost of construction - $20). I have made all my 6m contacts on 52.525 FM. One of these days Ill get a small beam, tune it up for the SSB portion of the band, point it north and get funky.....but for now all I have is the j-pole tuned for 52 mhz.

36. Any 50mhz AM'ers?

Yahoo group: 6meter (2000 — 2003)
Date: 2001-12-15 12:13:21 UTC
From: akmar38
Topic: 36 Message: 36

There have been some pretty decent openings on AM for the last couple of weeks. I'm in EM79 (S.W. Ohio) and have worked stations in Texas, Florida and Maine. I ALMOST had contact with a station in California, we made initial contact, but lost it in the flutter before we could exchange info. This is all with an old Lafayette HA-460 20 watts into a homebrew dipole about 25 feet up.

The next time you hear a good USB or FM opening, switch over to AM, you might be surprised at what you hear.

37. Working on 6m

Hello,

I am up on 50.130 at 3:54pm CST Saturday afternoon. I have a voice key calling CQ every 60 seconds. Give me a jingle and I will jump over to the mic.

I will also leave the email running for a while. If you want to make a contact give me a heads up and I can swing the beam over to you.

What frequency do the AMers hang out on? I have 50.400 AM programmed into my Icon 706 - is this the correct "call frequency" for AM???

So far, the only mode I have been able to get results on is FM. I have heard stations on SSB, but apparently they cant hear me.

I was also wondering about the AM freqs for 6 meters. I have great luck on USB but have never heard anyone on AM except when me and my friend plays around with the modes our rigs will do. But I would be very interested in doing some AM.

James,

50.4 is the AM calling freq.

I too have the 706 and love it. You should have good luck on 6 meters as it is 100 watts but for 2 meters and above you will need an amp. I have one of the originals and use it in contests but again, you need a amp then you can be heard. Of course it doesn't help to be on the east coast...grid en90 where there is a lot of activity.

Good luck and hope to hear you soon,
Sid n3ybe

About as hard as on the rest of the plastic cars. :-) I use a 4 magnet mount that will hold my 75 m hustler in place on the freeway - which means that it works for a lot of different antennas.

Merry Christmas!

Jamie,
There was an "amateur" review of this rig posted to
QRZ.com last week. You might want to check it out...
Beware all the flaming posts regarding RCI's
reputation of making Amateur gear for the CB'ers. If
you read between those, it's a pretty fair review with
some good comments from others. Hope this helps!!

Five new Countries, what a Christmas Present

Br Virgin Is - VP2VI
Guadeloupe - FG5FR
England - G3NVO, G4RGK, G0HVQ and G3WZT
Wales - GW3MFY
Scotland - MM0AMW

All on CW. 100W and a KB6KQ loop, from EN52. A great way to start
Christmas Day.

Merry Christmas to all

Enter your vote today! A new poll has been created for the
6meter group:

What is the brand of your primary six
meter rig??

o Icom
o Kenwood
o Alinco
o Standard
o Yaesu
o ADI / Pryme
o Ten Tec
o Ranger

To vote, please visit the following web page:

http://groups.yahoo.com/group/6meter/polls

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

After looking around I found that Yahoo groups was the best free offer on the net for running a group/mailing list. It offers the most control and features of any free service. I'm sorry that some of you dislike Yahoo but it is still the best bang for the buck "free". Yahoo does offer a mailing list only option to its groups where you miss out on alot of the feature of the group but you still get the messages that the users pass back and forth. For this group anyone can join by sending a blank e-mail to 6meter-subscribe@yahoogroups.com without ever having to go to the yahoo groups site.

Jamie....I appreciate the response and understand. I'm working on getting a
"trash" account which will be used only for such things....it is just a bit
of a pain to have to do such things. BTW, good job on keeping the info
flowing! Love playing on 6M, just not enough time!

Cheers;
Andrew

83. Rig choices for HF and 6/2M

Yahoo group: 6meter (2000 — 2003)
Date: 2001-12-28 16:21:58 UTC
From: livitup1
Topic: 83 Message: 83

Hi everyone,

I am a technician, with plans to upgrade to general in the very near future (about a month). Currently the only rig I own is a 2m mobile that I want to keep in the car. So I need to set up a shack.

I want to spend less than $1000 on a solution that will get me on 160-10 Meters, as well as 6M and 2M. Of course I don't mind buying used, but I would prefer solid state. And it doesn't need to be one rig.

So far the best thing I have ben able to find is an ICOM IC-745 (about $500) or an ICOM IC-735 (for about $300) to cover HF and then a TenTec 6N2 ($700) or a Kenwood Triband mobile with the 6M chips. I haven't been able to find the TenTec available used anywhere, and the Kenwood is really expensive when you add in around 300 bux for the 6M card if you're not lucky enough to find one already installed in a rig.

The problem I am having is that either of the 6/2 Meter rigs is roughly twice the cost of my HF rig. Somehow that just feels wrong to me. Is there anything out there that covers HF+6 (I can use a 2M HT in the shack if I have to.) or a 6M or 6/2M rig that costs around $300? SSB for 6M is the #1 feature for me, so FM only boxes need not apply.

So what solutions are you all using out there? I know there has to be a relativley inexpensive way to get on the air.

Mine is more expensive than you are looking for, but my wife bought me a new Kenwood TS-B2000 for my birthday this month (66). $1,549 from AES, although I know some other stores were advertising the same price. It has no display. Only things on the front of the radio are a phone jack, a mic jack, and an on/off button. Connects to my computer with a serial cable, and everything displays on the computer screen. Covers 160 m to 70 cm - cw, am, ssb, fm. My first new radio since 1979, so I'm still learning how to deal with all that this rig can do. The more I learn about it, the more that I am enjoying it. If you buy one before 12/31, Kenwood is offering a free Heil goldline mic. However, the paperwork said I could expect to wait 6-8 weeks for the mic. Oh, well...

Good luck on the upgrade, and have a good new year!

For $800-$900 you can buy a new Yaesu FT-100D

160-70cm minus 220Mhz
100Watts to 6M and then 50 on 2M and 35 on 70cm
DSP and NB works great even when mobile.
I have 2 of these radios that I have had for a 2 years and I operate 6 and 2 SSB mobile.
I have seen used ones for aroun $700

Nice thing if you want to operate mobile is the ATAS-100 screw driver ($250) but you only get 40M-70cm with this antenna.
This is a all-in-one rig.

706MKiiG is another choice. My experince with this was not great. But that is my opinion. the recieve wasn't as good as the FT-100 and the noise blanker wasn't great.

Both of these run great either base or mobile...

Other than that.. check for a used FT-847... currently they are $1300 new so if you can swing a extra 300 you'll have a great base rig. I have been behind these rigs a few times and operate great. All these rigs work 6M with about 100watts on 6.

Just my 2 cents now...

Subject: [6meter Sked] Rig choices for HF and 6/2M

Hi everyone,

I am a technician, with plans to upgrade to general in the very near future (about a month). Currently the only rig I own is a 2m mobile that I want to keep in the car. So I need to set up a shack.

I want to spend less than $1000 on a solution that will get me on 160-10 Meters, as well as 6M and 2M. Of course I don't mind buying used, but I would prefer solid state. And it doesn't need to be one rig.

I use a Icom IC-706mkIIg which is 100watts on 160-6m 50w on 2m and 20w on 70cm. The rig is around $850 and is a great all around rig that is very easy to use and setup. You will need a 22 amp 12volt power supply to use it. That is normal with most 100watt rigs.

You can find used Icom IC706MKIIG's for around $650-700 (be sure you get the MKIIG). They're a good starter radio for multimode all band 160-450MHZ.

If you look 'real hard', you can come up with a used IC-746 at right about $1000.
The 746 doesn't have 450MHZ, but all in all, it has to be one of the best radios
around on a price/feature/performance basis. All mode 160-2M with all the features you could want. This is a radio you can be happy with for years :-).

If you can live with just 6M and HF, the Alinco DX70 (esp. the TH model) is worth considering. I bought one for $400 w/remote kit and a couple of HamStiks at Shelby (NC) last year. Decent 6M and good HF. Of course, a Yaesu FT100D, the FT847, the Icom 746 are all good rigs, as is the 706 MkIIG. For 6M only, I've still got my Swan Two "Drifty" C with the external 210 VFO....of course, it is a boatanchor, but fun to play with.

I have the Icom 706 MKIIG and I love it. Yea...its a "mobile" rig but don't tell me that, I use it as a base radio. If you want to have a choice of rigs, check out the Yaesu FT-100, it is the competition for the Icom 706.

Personally, I like the Icom better...but that is because I own the Icom. People I know who have the FT-100 say they like the Yaesu. I think the Icom is cheaper however.

I've been using the Original IC-706 and love it. Someone mentioned the poor NB and I agree, although it's rarely an issue for me. Also, mine has only 10W on 2m, but the MKII or MKIIG is much better. For what it's worth, I got mine for $500 this year with a Heil HM-10 Dual Element mic, seperation kit, mobile kit, and the CT-17 PC interface kit. So the deals are out there. Also, Texas Towers has new 706's for $819!! If you're not in Texas, you won't pay sales tax and I think it includes shipping!! I have the 706 MkIIG and just ordered the AH-4 tuner for it. I hope to jump up active portable ZS-Pretoria, South Africa shortly after it arrives! I have been hearing some nice Italians on 6m with one worked, but operation is limited to time at home and reeeeal late at night to avoid any QRM to the neighbors. Hopefully the AH-4 will decrease the amount of spurs! Cheers.

Thats where I just got mine. Free shipping and seperation kit coupon. One
call and two days later it was on my door step in new mexico. I got the AH4
at the same time and paid a small shipping for it.

I thought I heard him say he had a big yagi with 100W. But I am not sure, his signal was 4 x 5 here with my little dipole. I could not hear many that he spoke with.

I think I will put a 6 meter yagi in my attic !

Dan, try the Brinkley Electronics site (www.brinkleyelectronics.com) as he has some info on Midland units. Andy is also a ham, but is irregular in getting back to people....he works two jobs as well as being a VF, so patience is needed. He is GOOD, however....and his website is full of good info.

Date: 2001-12-30 13:00:43 UTC
From: Harold Deese
Topic: 110 Message: 110

Greetings all,

I am looking for suggestions as to what kind of antenna, or antennas, I can use indoors with an ICOM 706MkIIG. I want to use all modes on 2 meters and 6 meters; primarily 6 meters but with some 2 meters as well.

Please reply to the group.

Tnx & 73.

112. antenna for HF

Yahoo group: 6meter (2000 — 2003)
Date: 2001-12-30 15:59:03 UTC
From: Kc2aup@aol.com
Topic: 112 Message: 112

Can anybody tell me what kind of an antenna will be good on the HF bands that is END FED? I live in a condo complex, and cannot put up an antenna. However, there are trees in the back yard that I can throw up piece of rope over a branch which is about 40 feet in the air on a 30-40 degree angle and pull a wire up. I will run the coax in the sliding door for now. At least this way I can take it down everyday if I need to (to keep them happy here). There is not enough room for an inverted "V". I would like to work 10-40.

Take a look at Cushcrafts A627013S it is 3 elements on 6 meters horizonal 5 elements on 2 veritcal and 5 or 70cm vertical. I use it with my Icom IC-706mkIIg and it works great. The 2m and 70cm are on the same coax with a different coax for six meter which makes the Ant. a perferct design for the IC-706mkIIg.

I am getting good results with a Stealth antenna from Ener-Tec. (See QST) I can't have outside antennas in this subdivision, so I have the stealth on the wall in the shack. It's supposed to be good 80-10, but so far, I have only used it on 75 and 20.

115. Re: [6meter Sked] antenna for HF

Yahoo group: 6meter (2000 — 2003)
Date: 2001-12-31 04:41:53 UTC
From: James Carlin
Topic: 112 Message: 115

I saw another "stealth" antenna at a local ham fest. It looks like a metal grid box, on top of a flat metal grid plate. They make 2 sizes, one is good for 6 meters and the upper bands on HF, the other is for the rest of HF. The demo antenna was on a 6 foot pole stuck in the ground, behind an old airplane hanger renovated into a convention hall. The demo radio was an Icom 706MKiiG. I did not transmit on it (no microphone on the demo radio), but I did tune around and I was surprised at what I heard. I had no problems tuning in WWV on 20 and 15 mhz, I also tuned in a lot of ham traffic on 14 mhz, plus several AM shortwave stations. I am in Florida, so for all intensive purposes the antenna's height above sea level was at the MOST 10 - 15 feet (including the 6 foot pole the antenna was mounted on).

I forgot what this antenna is called, but someone else on this list might know what I am talking about. The antenna is "stealth" because it is designed to fit in the crawl space of a home (some of you might have full blown attics - but here in South Florida we just have enough room under the roof for insulation, air conditioning ducts, and space for a person to crawl around in). This antenna would also make an excellent field antenna (for emergencies, field day, camping, or whatever). You could mount the antenna a foot or two above the back of your roof, it would be hidden from view from the front yard. Or, if you live in an elevated location, you could just stick the antenna on a pole in your backyard.

I wish I could post more info, like a manufacturer name or a web site....but I can't. This was just something I saw at a ham fest and thought it was cool (mainly because of the way it looked...it looks NOTHING like a conventional antenna and more like a live animal trap...but the people at the booth swore that it raidiated giving low SWR over its advertised frequency range).

From: MadDrewski@aol.com
Topic: 120 Message: 120

Band was wide open this AM, worked Martinique, Venezuela, and several South American countries w/10 watts. Could hear several european stations (ES OK and an OV??) but could not get thru the pileups. The ole J-Pole did the best, better than the wire or the quad! For anyone looking to get on 6M, do build a J Pole, good starter antenna and small footprint, very important if you are limited on space. Cranked up the old Swan 250C and worked Canada, bunch of W8's, an AA6 as well as lots of mid-west stations. Anyone for a New Year's Day AM contact? I called for 30 minutes on 50.400, no one on AM today, I guess!

I'm very much interested in procureing one of your converted amps. Do you convert just the SB-220? What is the expected input and output?

Please email me with info and ordering instructions.

Thanks,
Sid N3YBE

Hi SId, the units sell for $875.00, I am awaiting a NEW silk screen to customize the front panels. THe units do 1200 to 1300 watts carrier output with 100 watts drive. I also convert Swan Mark I's and II's as well. I have a Mark II ready to go. ALl the amps have a small slave 12v relay for soft keying of newer rigs. Thanks 73 Louie

Lewis,
I use a Icom IC-706mkIIg for my 6 meter work. It does a great job with
100 watts and a DSP. This radio will also work on 160-10m, 2m and 70cm.

If your looking for a 6m FM only the Alinco DR-M06TH does a good job but at
20watts is a bit low powered.

Maybe someone else has some more suggestions.

Hi,
I have just come into possession of an ICOM IC-551 6 meter allmode transceiver. It is a 10 watt radio and I am using a Hamstick with magmount for the antenna. This is not a good combo for dx work from the home qth but it does recieve extremely well (Vermont, NC, Texas). The previous owner made many contacts in the eastern part of the USA from our zone(cn86)in Washington state and had many 5-7 to 5-9 reports. I will be getting a better antenna and will be able to report my results in the near future but from what I have observed a this is a good radio and they are not all that expensive ($200 +/-).

Topic: 138 Message: 138

Welcome all new users to the 6 Meter Sked DX Group/Mailing List. It's great to see so many people with a interest in six meters. I'm Jamie-KE4HTM the founder and moderator of the group. I do not consider myself the owner of the group. I believe each of you owns a little bit of the group. This group is a joint effort between you the user and me the moderator. Your job is to post messages about anything to do with 6 meters like band openings, for sale items, questions to do with equipment, operating practices or anything you have a question about concerning six meters. Basically any msg that will promote good will among 6 meter hams world wide. My job is to keep the riff raff out. To protect the group from users that may want to do harm to the group by causeing flame wars among users, causing fights or using excessive abussive language. Also my job is to maintain the group site on Yahoo Groups. Which I thank Yahoo for making this job easy for me. Some of you are wondering if there is a charge to be a member of the group and I'm glad to say that at this time there is not and unless I have to move the group over to a private server there never will be. So many things in amateur radio are expensive and I feel that fellowship among hams should be free.
Please give me your suggestions or any changes you would like to see. Also If you have ideas for the voting polls please msg me with them. I am here to help with any questions about the group you may have to please feel free to e-mail me at anytime. Also if you find the group interesting, fun or just cool please announce it on your local nets and tell your friends. Give my e-mail address to anyone interested and I will give them all the info on the group. Enjoy the group thats why it is here.

73 and Good DXing,

Jamie R. Dean

Hi Lewis,

The Ranger RCI5054dx, 6m all mode gives you the benefit of all of the 6m band. Operates both AM and FM plus SSB and CW. Great little radio for under $300. 25 watts and a loop sky wire got me into Slovenia, Norway, Lithuania and Brazil without a lot of trouble this past week. The 2002 version is supposed to have a built in PL Tone board but the 2001 has the mods in the instructions to put one in without voiding the warranty so you can work the PL protected FM repeaters. Great little radio for the money.

Brian Fletcher,

> kb1ghq@...

Hi Lewis,

At the present time, there are many good mobile/base 6 meter radios to choose from. Finding the right one to meet your needs, however, requires you to identify what your needs actually are.

First determining what you want to do is critical. Are you interested in all-mode operation, or are you just interested in FM operations? Are you thinking about running 6 meters mobile only? base only? or both? Do you think you would like to operate a dedicated 6 meter only radio, or are you thinking that you might like to have a rig with HF/VHF/UHF capabilities combined? What type of a budget are you working with? Are you thinking new or used?

As you can see, there is much to consider. Is this going to be your first 6 meter radio? If so, are you willing to invest almost $1000 or more in an all-mode rig? Or might you be considering a smaller investment, just in case you feel 6 meters isn't for you?

In the new radio market, you can find an all-mode 6 meter radio starting at at around $300 (RCI-5054DX), or you might consider Ten-Tec's 526 two meter and six meter all mode combo with DSP for a little under $700. Then, there is the Icom IC-706MkIIG and the Yeasu FT-100D offering HF/VHF/UHF in a mobile package for under $900. The list goes on and on.

Take some time to think about what you want to do. Review the many sites that provide radio reviews from owner/operators. Identify your needs, and see what is best for you. I wish you luck, and am glad to see you considering 6 meters!!

141. 6m crossband

Yahoo group: 6meter (2000 — 2003)
Date: 2002-01-04 06:43:19 UTC
From: kg4jrt
Topic: 141 Message: 141

Just out of curiosity??? Does anyone know if there is a ruling that prohibits or why there is little interest in crossband of 2m and 6m. If not do you know of any repeaters in your area that has that capability? There is an awful lot of 2m to 70cm rigs out there but non that would crossband to 6 that I am aware of. It would look like with the right set up, particularly in large emergency situations that covers a lot of area, such a repeater could come into being pretty handy.

Just curious.

Brian,
There is a 6 meter repeater right out side of Hickory, NC on Air Bellows Gap on 53.050 it has 2 simplex links on 2 meters one on 144.420MHz. and one on 145.520MHz remember this 2 meter links are simplex. you will hear nothing on the 2 meter side unless the 6 meter repeater is active.

150. Ranger RCI 5404DX $289/$329

Yahoo group: 6meter (2000 — 2003)
Date: 2002-01-04 21:27:20 UTC
From: Kevin Gundlach, N1PNR
Topic: 133 Message: 150

Hello all,
I just got off the phone with Ranger, and they said they have no intention of offering an updated model with PL built in. They offer the PL board as a factory-installed option for $40.00. So, if anyone wants one of these radios, it's $289 for no PL or $329 with PL, US shipping included. I'm trying to build up my volume with Ranger, so I'll sell them for almost what I pay for them and include the shipping for free to anyone on the 6 meter Yahoo! group.

73,
Kevin N1PNR

P.S. In case you were curious, the retail price on these is $329 without PL ($369 with PL), so if you buy one with PL for $329 its like getting the PL board for free.

I use a M2 6M Halo that I am very, very happy with. I am
currently in CN76, on vacation as is were from BP51. I have use the
antenna on a 6 foot mast above my Travel Trailer, and on a 50 foot
temp mast, both worked well. Have contacted Japan, the whole east
coast and up into Canada, and a few middle states in the past few
weeks with it.

From: Lee Levine
Topic: 155 Message: 155

I'm using an MFJ 2Meter / 6Meter vertical antenna attached to an ICOM IC-746
with no results. I try to use voice on FM. Do I need a different antenna,
a different mode
or are there very few operators in the SW US?

Thanks in advance.

Hi,

I would like to get into 6 meters, the only new rigs I have seen have been alinco and ranger, I don't know very much about these companies. I would be doing voice, I am just a tech no-code. I would greatly appreciate any advice/help that might be given. I live in a townhouse rental and cannot mount any permanent antennas, plus I don't have an a crawl space or anything of that nature for any stealth antenna. Is there any hope? I sure would like to be able to do some dx, any suggestions on radios/antenna setups sure would be greatly appreciated,

Thanks,
Bill

159. SoCal 6 Meter Nets

Yahoo group: 6meter (2000 — 2003)
Date: 2002-01-05 00:44:50 UTC
From: Joe Acevedo
Topic: 159 Message: 159

Friday, 8:00 PM, The San Diego Six Shooters Club holds an open net (currently) on 52.525 MHz FM simplex. Net control is Joe N6SIX, and after the net the weekly ARRL News feed is broadcast on 52.040 MHz. The group is actively seeking a location and planning construction of an OPEN repeater for their area and needs.

Sunday, 9:30 AM, The California Award Hunters 6 Meter net is held on 50.175 MHz upper sideband, with Frank KA6BUY of Long Beach as net control. This net is held in conjuntion with (and following) a long-standing 9:00 AM net held by this group over 146.520 MHz.

Sunday, 10:00 AM, The Southern California Six Meter Club holds its AM Roundtable Net, conducted by Will Anderson AA6DD of Riverside. It is held on 50.400 MHz, amplitude modulation.

Tuesday, 8:00 PM, The Southern California Six Meter Club holds its SSB Net, conducted on 50.150 MHz., and is generally hosted by Will Anderson as well.

Tuesday, 9:00 PM, The San Diego Six Shooters USB Net takes place on 50.200 MHz. EXCEPTION is every third Tuesday, at which time they hold a monthly meeting. Meetings are currently held at the Top Sirloin Restaurant in El Cajon.

Thursday, 7:30 PM, The Southern California Six Meter Club holds its FM Repeater Net over the 'CARS' network. It is hosted usually by Dan O'Connor N6BKL. The net is conducted over the following linked repeaters: Frazier Mtn repeater (52.56 MHz -offset), the (Malibu) Buzzards Roost repeater (51.94 MHz -offset), Barstow repeater (52.68 MHz -offset), and the Lompoc repeater (52.94 MHz -offset). These repeaters require an access tone of 82.5 Hz.

VERTICAL POLARIZATION is the norm for the above listed nets, and all are open nets. Please keep us informed of any other nets for 6 Meters in the Southwest or Pacific regions, as well as any updates or corrections to be made.

The growing widespread use of 50.300 FM has recently produced many interesting and unexpected DX contacts throughout North America. It is ideal for those operators whose antennae favor the low 'DX' end of the band. Be sure to include it in any memory and scan groups wherever applicable.

Thanks to Dan, N6BKL for this list

Let me put it this way....

In the last 18 months, or so, I've worked and confirmed all states
and have worked around 25 countries. Today, I worked Finland,
Greenland and Alaska.

All of this running 100W to a KB6KQ loop at about 30' in EN52.

Short answer.. Yes a loop works and can work well.

Bill,
for what it's worth, I put-up a Par Electronics 6m horizontal triangle omni on a 20ft mast
and have worked 27 states and 2 countries, so far. I'm sure the same antenna could be
used in a mobile situation. I'm using an Icom 746. If you can find one, I've read great
reviews on www.eham.net on the Icom 575H.

I think it is a combo of both. Before I moved, I used 6m FM is Tucson, AZ. In all of the 6 months I listened (Febuary-August) 2001 I only worked 1 person out of state. Now, in Ellicott City, MD. I have listened for about 2 weeks, And worked a guy in seattle and canada (Pretty good for me!) with 25 watts. I have heard Europe and South America too. During the band openings, I occasionally call on FM and get no replies while I can hear pileups in Europe. I would switch to FM if you can.

Date: 2002-01-05 22:10:15 UTC
From: High Voltage
Topic: 164 Message: 175

I use a mobile 2M 5/8 mag mount base loaded antenna stuck to a 4"x4" metal electrical box cover with four 1/4 wave pieces of 16 gauge wire connected on the four corners as a ground plane sitting on the front porch. Works surprisingly well with no tuner required on an FT-920 and IC746 radio, the SWR is 1.5:1 or less from 50-54mhz. The key to making this work was grounding of the radios, keeping the ground plane radial wires straight evenly spaced, and measure from the center of the plate for 1/4 wave. I'm in a first floor apartment with an 8 foot rod in the basement. Took five pieces of 16 gauge bare copper wire twisted together evenly with a drill. At the rod they are twisted and soldered together clamped to the rod, all copper fittings. At the radio desk they are soldered together approximately 3 feet from the end, keeps things from untwisting. This leaves 5 ground straps that are connected to the two radios, the power supply, and the antenna switch (used to select the radio) with one spare. This setup running 75 watts SSB on 6M with either radio has produced contacts in 12 countries and about 20 states during the resent 6M openings with excellent signal reports. Believe me when I tell you no one is more surprised then me with the performance. The entire thing including antenna was less then $30.

Part of the "problem" is that we need to take the time to listen for QRP stations. Today, I worked several hundred stations, and listened for QRP stations, managing to work a bunch of them in the New England area who were running as little as 1 watt. Of course, having a nice beam would certainly help your chances. You may consider, space permitting, a small 3 element beam, which can be fairly easily constructed.

Hope to see you on 6!

Don't give up...try 50.125 to 50.250 USB in the late afternoon/early evening. Worked several NM stations and a couple of VA3's the other day..and I'm running a J-Pole and 10 watts. Most contacts have been around 50.125 to 50.150, some up higher. Get a listing of nets in your area.....there should be some FM and SSB nets in the area, the 746 should be great for contacts. As for antennas, the Jpole works well, there are cheap quads available (cubex.com) and my ole G5RV loads nicely on 6 with the MFJ969 tuner.

Hope to work you on 6!

I am working with a 6 band trapped vertical to 6M with a 706MIIG with
pretty good luck. been able to work Alaska (FINALLY!) and trying to get
over the big pond. I am new to this list and hope to work several of the
list's members from DM 97 KS. Until later...........

181. Hustler HF mobile antenna on 6 meters?

Yahoo group: 6meter (2000 — 2003)
Date: 2002-01-06 04:53:20 UTC
From: kn9h
Topic: 181 Message: 181

Recently I purchased an Icom 706Mark11G which I operate only mobile. I had been told that the Hustler HF rod, 54 inches, minus the adaptors for the various HF bands, was reaonant at 6 meters, but I find a very high standing wave when I attempt to use this antennaoin 6.On HF it is fine with the approriate adaptors. Any way to make this work on 6?....I have a small, mobile, tuner but I afraid to obtain a reduced standing wave may overheat the coax and cause loss of power, also. Recommendations? Tom Burns, KN9H

182. NJ nets

Yahoo group: 6meter (2000 — 2003)
Date: 2002-01-06 05:45:40 UTC
From: A V Flinsch
Topic: 182 Message: 182

Are there any local nets operating on 6 in the central NJ area?
If not, does anyone want to start up one?

Hi Bill,

Nice to see a new one interested in 6 meters.
Besides the brands you mentioned you should check PATCOMM.
Visit their page www.patcomm.net , because they offer a nice DualBand
radio the PC500, mine is with 10 and 6 Meters for $ 395,00.
It has a Pre-amp, Continious Speechprocessor, Amplifier Contact(If
you need) etc.
Pay their page a visit.
I love my little toy, although i also own a PATCOMM PC9000 which
delivers a little more power on 6.
Well pick your choice.
Whatever you decide, welcome on The Magic Band.

This was too good to not pass on.

Lee Levine

Terry Boatight KG4FNG Writes:

Ten Things that Prove You Spend too much Time at Radio Shack.

1. You learn that the Radio Shack slogan, "you've got questions, we've got answers"' is true. They have answers alright, it just may not be the right ones!

2. The people that work there think you are trying to contact someone from Mars or outer space, with all the cables, adapters, connectors, etc., that you buy there every week.

3. You think of opening your own store, because with a name like Radio Shack, they ought to sell lots and lots of amateur radio equipment.

4. You know your way around the store better than the employees that work there.

5. You spend so much time and money driving there, you think of buying one of everything.

6. The people who work there think you own one heck of a radio station,(in a way it might be a little truth to that), or you're trying to build a bomb.

7. You realize you know more about electronics and computers than they do.

8. You spend more money in a week at Radio Shack than you do on food.

9. You know everyone who works there by their first name.

10. You have your own private parking spot there.

Do feel to bad...

Us folks in Minnesota generally have a hard working more than 30 miles on 6m in the winter. The opening yesterday and today is finally favoring us in the black hole area known as Zero Land.

I have worked 5 Alaska stations today with an Icom 706MKIIG at 100watts with a home brew 3 element yagi at about 30 feet.

I am going to end having to drive around the rest of the lower 48 with a 6m mobile dipole to get the rest of the states for WAS. :) Up until X-mas I was not hearing anything but local QSO's on 6m..... just think we are supposed to be on the downward slide of cycle 23... WOW.

Date: 2002-01-06 22:24:37 UTC
From: Dan/W4NTI
Topic: 197 Message: 197

That is too short for the SSB end of the band. That antenna will do well on 52.525 or so, FM.

Using a tuner will work. I wouldn't worry about the 706 heating things up too much.

As for efficiency, thats another subject. But it will work.

How about hanging a 'Squalo, or a Halo' for 6 meter mobile? Worked fine back in the 50s and 60s.

Dan/W4NTI (Alabama)

198. Couple more 6m Spots

Yahoo group: 6meter (2000 — 2003)
Date: 2002-01-06 22:25:53 UTC
From: John Hoaglun
Topic: 198 Message: 198

KL7FZ - BP51 Worked FM (I have never worked FM on 6m before let alone 6m DX)
he is on 50.295

KL9A - BP51 50.165 - Alaska with an odd call sign.

Both are easy QSO's if you can hear them.

So far I have had to spend more than 10 minutes to break any of the
pile-up's.... most them you can just throw out your call a couple of times
and get them.

I am running 100watts in 3 elements at 30 feet or so.

JH

199. Re: [6 Meter Sked] BP71 is active

From: John Hoaglun
Topic: 192 Message: 199

I have yet to hear anyone on a 6m repeater... 6m is not too popular here in Minneapolis unless there is a huge opening (like this weekend.)

Is your dipole hooked into a rotator? You might be just too close to the hills. Aren't you around Little Rock? Lot's of hills blocking you. Have you tried working anyone else in town on 6m simplex SSB yet? Have you checked your SWR? (I had the same quiet experience when I first got on.... unless there is an opening calling CQ rarely got answered.)

Saturday night there was a nice hour long E opening in your neck of the woods... I heard Ar, La, Tenn, 'Bama, and someone from South Carolina.

Something to consider.... repeaters are generally vertically polarized.... Beams are generally horizontally polarized. Working DX polarization is not too huge as your signal will become twisted anyway.... "Take off angle" is VERY different between V and H polarization.

I have quick 6m story from New Years day that explains how it works....

I worked Aruba 5x9+.... first try from Minnesota (Zero land is generally a black hole.... WOW.) We probably could have run low power things were SOOO open. A few minutes later while talking to a friend across town (about 15 miles away) beam to beam (100watts oppps....) someone else running a vertical (about 20 miles away) with 100watts tried to join our QSO..... He was maybe an S1 at best. That is polarization.

Topic: 192 Message: 203

Thanks to all the gang in the lower 48 who made my day a lot of fun! I worked stations today from Maine to the south east, and from the east coast to the southwest. A great opening (again) on 6! I've worked well over 500 stations in the past few days - it's a kick to pass out the first Alaska QSO on 6 meters! I'm looking forward to even more, although we're in a decline on the cycle. See you on the magic band!

205. 6m Greenland to Virginia

Yahoo group: 6meter (2000 — 2003)
Date: 2002-01-06 23:17:50 UTC
From: KD4YOL@aol.com
Topic: 205 Message: 205

I made my first 6m contact with Greenland today. I am in FM07 and talked to OX3OX in GP36 on a 6m sleever antenna about 100ft in the air vertical on 50watts. Thanks for the heads up on the band opening. Rob KD4YOL FM07

Joe,

Thanks to you and all of your 6m neighbors in Alaska. I had never made a QSO into Alaska until I talked with you on Saturday. (We talked on both Saturday and Sunday.)

In about 3 hours of laxed time in the shack I was able to work about 6 grids (10 QSO's) into Alaska with 100 watts and a simple 3 element yagi (home brew.)

It was simply incredible to hear folks in Alaska from 50.105(SSB) to 50.295(FM). At times there were people lined up every 5 to 10 KHz apart on the band. I heard several operators that said they didn't need the grid but want to help everyone get the Alaska contact for WAS for those people that needed it.

Thanks to everyone for a great weekend on the magic band.

From: John Hoaglun
Topic: 177 Message: 208

I can probably draw it up if you would like... the design is pretty simple for 1/2 copper.

50.125MHz = about 50.5 inches of 1/2 copper for each leg of the dipole. I looked at several different measurements for how far to space out the elements. (I have a notebook that I keep with various antenna designs that I think are interesting.)

I used a MFJ antenna analyzer to make my final adjustments to the element lengths to get the antenna to resonate where I plan to use it. The antenna is about 1.2-1 on the calling freq.

The 2 reasons that I like are:

1. It's cheap, easy to work with, and easy to find.
2. 1/2 copper gives a pretty wide bandwidth which is helpful.

209. Re: [6 Meter Sked] Thanks!

Yahoo group: 6meter (2000 — 2003)
Date: 2002-01-07 00:43:40 UTC
From: WL7M
Topic: 206 Message: 209

Part of the fun is to try new modes as well. Several guys asked me to go to FM, as well as a few AM "die hards" wanting to get 6 M WAS on AM mode! Happy to oblige! I was fortunate to get WAS on 6 meters in a 30 day window last November - an amazing feat - and now am just happy to pass out QSOs for the state/DXCC/grid square. After all, everyone else out there helped ME get WAS, so I figure it's my honor to help them with Alaska. Quite a few folks have sent me a QSL saying I was their "last state". Quite a thrill for me too!

See you on the band....

212. W4NTI 6 meter Yagi

Yahoo group: 6meter (2000 — 2003)
Date: 2002-01-07 01:53:38 UTC
From: Dan/W4NTI
Topic: 212 Message: 212

Here it is for what it's worth. The W4NTI 3 element 6 meter yagi.

I decided to use a Folded Dipole Driven Element. Mainly because it is simple to match up. I built a coaxial balun (4 to 1). I decided to use RG-213/u because I only needed a 200 ohm match. I got the basic info from the ARRL antenna book. It was an old book, but I believe it is still there under VHF antenna's.

I used # 6 solid copper for the other half of the folded dipole. And just simple nuts and bolts at the element end. I had to play a bit with the total element length, but with the MFJ analizer ended up at 108" total and the bolts were a 1/2" from the end of the driven element ends. The reflector and director needed no changing. I can't measure the FB with only a S-meter. Suffice it to say it is S9 on a 1 watt beacon 60 miles away off the front. Total zero off the side and the back slightly less than zero.

Where the balun in connected I had to cut the heavy copper wire. Then hooked up the balun and simply bent the copper away from each other and the swr was fine. A bit of adjustment of the coax balun may be required. I cut it slightly longer than required so I could trim it. Ended up with 1.2 at 50.125.

Here it is:

213. W4NTI beam

Yahoo group: 6meter (2000 — 2003)
Date: 2002-01-07 02:07:00 UTC
From: Dan/W4NTI
Topic: 213 Message: 213

That didn't work on the reflector...OK here are the dimensions

Dir 105 1/2"
Driven Element 108"
Ref 116 1/2"

Spacing is Ref to Driven Element 59"
Driven Element to Dir 47 3/4"

1/2 " aluminum for elements
2 1/2" boom.
Boom lengh 9 foot.

4 to 1 balun made of RG-213/u

492 x .66 / 50.1 = 6.5'

coil the coax

Used PCV for spacers on the driven element.

Sorry the JPEG didn't come through. If anyone wants it send me an e-mail and I'll send it to you.

Dan/W4NTI

Have you been able to work any west coast stations? I am
wintering down here in CN76 and have not yet made a contact back home.

Hi Chris!

Sure have - although not recently - the band has been open to the midwest primarily, with sudden openings to the east coast and southeast. At other times, I've worked tons of stations along the west coast, from Mexico to Seattle. I've worked through the Seattle/Portland area over to Spokane. CN76 would be a very popular grid, given the tiny sliver of land that comprises the grid! Hope you make a few QSOs back to Wasilla! NL7Z, Kevin, is very active on 6 meters, and he lives in Wasilla also. Actually, NL7Z is one of my old callsigns.

Enjoy the weather Outside! ;-)

Horizontal is best for SSB, vert for most FM ops. However, my JPole works
pretty good on 50.125, and it is vert. polarized. Try horiz. first, tho.

Andrew

Bob,
On the 3 ele yagi when working SSB defintly go horizontal. Almost all SSB ops are done on the flat side.

221. DK8ZB confirmed

Yahoo group: 6meter (2000 — 2003)
Date: 2002-01-07 14:02:42 UTC
From: Gordy Tatro
Topic: 221 Message: 221

I just received confirmation of Germany DK8ZB
from Dec 31, 2001 to DM82 (west TX).
Here is the kicker, I was using an IC-726 (10 w) with a G5RV dipole!
Gordy Tatro N5FLV, SMIRK #749,

Vertical is for FM modes. The rest are horizontal. With possible exception of packet.

The more beam, the better. 5 elements or wide spaced 4 are popular. A 3 works just fine also. With slightly less gain.

Loops work OK, but if you can get a 3el yagi up in the air, do it. The
difference is
significant.

John - K9IJ

WAS + 25 Countries with a Loop, but I sure wish I had a yagi up there.

Be sure to factor the cost of the rotor into the Yagi. I built a j-pole with home improvement store aluminum and put it up last week. Talked to Greenland and several states on SSB. You might want the loop or another omni antenna to help spot openings, and the beam to work them. Another beam possibility is a hex beam, or reflected-m beam... check www.hexbeam.com. or search Google for "reflected m".

227. Antenna's

Yahoo group: 6meter (2000 — 2003)
Date: 2002-01-07 18:12:40 UTC
From: Dan/W4NTI
Topic: 227 Message: 227

I keep seeing lots of comments that would make a new-comer think that a simple vertical of some sort will 'do the job' on six meters.

In an attempt to straighten things out I want to say this.....a vertical on six meters is like a vertically polarized dummy load.

If you want to be serious on the DX modes and on the local ragchew modes....get a horizontal yagi or a quad. Rotate it. Feed it with decent coax and enjoy the magic band.

A vertical does work after fashion. When the band is open that is fine. But if you want to enjoy all that 6 has to offer...put up a decent beam.

By all means, put up all the aluminum you can afford... put four stacked 11-elements on a 120-foot tower, if you can. All it takes is real estate, money, and a friendly zoning board -- in other words, money, money and money. If you can't, my $30 "dummy load" at 30 feet is lots of fun.

Yes you are right. The more the bigger and the highest
you can. I have worked 195 with the JV6 vertical but
am sure I could have a lot more with a beam. NH6CJ

I worked Ole yesterday as well on my sleever antenna. The band was open. I have a 3 element yagi just waiting to get back in the air. My tower is down for rotor repair. This is the first time I have ever heard anything but repeaters on the vertical sleever. 6m is usually dead. Don't get fooled by one weekend. But, I did talk to one of the old guys on my MARS net about what he used to use and he said it was the Halo in the 1960s. For the good DX you need a big antenna and some relatively good power. If on the other hand you are like me and don't have the green for a wide-spaced 5 element, any of the antennas the guys have been talking about will do. But if there is a big pile-up or band conditions are week the deck is stacked in the money man. You will here him snag contacts that you can't even here. Enjoy the ' Magic Band' . They call it that for a reason. 73's Rob KD4YOL FM07 072232Z

My 2 cents: I agree that the more aluminum in the air the
better. However, if DX operators will occasionally pause to give the low
power QRP folks a chance - when the band is open - they too can get in the
log. I've worked guys running 1 watt to an indoor dipole. And, as Rob
says below, that's why they call it the magic band! :-)

Dan,

If you want to try a low cost loop that you can build yourself try this! Cost $5.65 excluding mounting pole. Get a 20 foot piece of 10ga copper wire. Insulated or not it does not matter. The measurement for the antenna loop is exactly 20ft. Connect a piece of 50ohm coax to it. The center conductor to one end of the wire and the shield to the opposite end. Build a frame using PVC 1/2" pipe and attach the wire to the frame using electrical tape. Place the frame in a horizontal position at about 30 ft. in the air. SWR is 1.5:1 for 50.100-51.00 Have worked several countries and states on this setup during openings. If its something that works for you then you can spend dollars and get a real loop.

My 2 cents.

Brian

And if you want to get fancier, mount it on a boom, do a reflector 5% larger,
a director 5% smaller, and you have a Quad!! Now you have some gain, as well
as an inexpensive antenna.

Cheers;
Andrew

I tried using a TVI filter from the 6m rig but it seemed to degrade the system. I put a back of the tv set filter on and it worked. Also try to run less power. Sometimes that will help. And make sure none of your coax is right beside your tv antenna lead into the house. Do you have coax or twin lead from the antenna to the tv. The twin lead isn't as shielded as the coax.
Rob KD4YOL FM07 081346Z
P.S. My noise is back from the electric poles. It runs S-9 except when it rains and saturates the ground and then the noise is about S-1. Any help on this one would be great.

Rob.
The electric interference you have could be the ground on the transformer, call the electric company and tell them what you are hearing and that you are ham operator . They will come out and fix their problem.

Hi to one and all.

I am seeing a lot of talk about different types of antennas and am really excited about making some when things thaw out here, but was wondering if anyone has had any luck with using the good ol wire dipole?

Thanks es 73's Jeffrey KD6WDX
Northern MN

Jeffrey, I have worked over 40 countries and 150 grids from FN42 since Summery 2000 running 100W to a 80-10m G5RV up about 35 feet. As someone said earlier, you need good openings to do this, you won't be a band opener or closer like K1SIX. But it's been a lot of fun. I finally worked VY1 and KL7 for the first time this past weekend. I worked OH and ES for the first time the last weekend in December.

73 - Jim AD1C

Sounds like you need to go to your power input (pole, cabinet, etc) and improve the ground. I installed extra grounds set near my house to try to drop cable noise (common ground for cable/power by house). Now, I'm sitting on rock (big granite thing.. have one spot in the yard I gave up on and scraped off the dirt...60 ft long "rock river"....bigass rock!!) so I ran some 6' copper wires buried about 6"-12" down around the area (ala radials) ...dropped the electric noise by quite a bit, but only helped a little with the cable noise....that is being handled by bonding everything together in the cable boxes, and adding alum. foil in the covers of the caps (bloody fibreglas!! NO RF shielding at all!).

Hope it helps. Of course, the hint that rain improves the situ confirms a poor ground to me. Any experts out there for a more prof. opinion??

Cheers;
Andrew

OK...Quad 101 is in session:

Here are some links to use for designs & basic info on quads:

http://autoinfo.smartlink.net/kq6rh/antenna/cubic_qu.htm
Nice 6M quad info

http://www.lightningboltantennas.com/vhf.html
A company which sells quads..lets you see what they look like up/assembled.

http://lucky.innet.com/~cbranche/repeater.html
A nice basic quad design

http://www.packetradio.com/ant.htm#6mquad
Also a good J-Pole design here...the packet radio site is SUPER...bookmark this page.

Hope this helps a bit...quads are easy to build.. I have two I am currently setting up... one will be pointed SSE for US/SA contacts, the other ENE for Europe. No room in the attic to turn one...so I'm switching them (12V relays and a switch box...seems to work well...also holds the preamp). The 2M quad is rotatable, so no sweat there, and it seems to be better than the 2M yagi I'd used before.

I am looking also at the RaiBeam 2 element "supergain" antenna...may try to build one,and if the performance is what they claim, I'll post results here. Oh, for more time.....! Anyone having info on this antenna please email me with your comments.

As for the mounting & material....if external mount...use PVC or something w/UV protection...otherwise you'll be replacing parts in a couple of years. As mine are under the roof, I just use wood.

Also, there are some great portable designs...super for Field Day!!

Cheers;
Andrew

Have you contacted the power company? They are responsible for eliminating
interference caused by their faulty installations.

Date: 2002-01-08 17:31:01 UTC
From: W Shawn Falconbury
Topic: 254 Message: 254

I am new to the group and thought that I would take this opportunity to say hello and glad to see a group of fellow 6m enthusiasts. I have only been working 6m since about October and have already worked 17 states and 16 countries totaling about 35 grid squares. The openings have been fantastic and the only thing slowing me down is the fact that work must come first.
I am running an Icom 746 w/a max of 100w into a four element HyGain yagi at about 45 ft as well as a Diamond D130J Discone vertical at about 50ft for FM and a 10m inverted "V" dipole up about 40ft cut resonate on 6m for omni-directional (or at least bi-directional) scanning.
I fell victim to the 6m bug with my first opening and it is done nothing but get better. The "magic band" is certainty living up to its reputation.

Also I would like to let folks on this list know that there is a 6m net that operates in the North Central Alabama, Southern Tennessee, North Eastern Mississippi, North Western Georgia area that meets every weekday (M-F) evening at 3:00z on 50.150.00 MHz. Net control operators are located in the Northern and Central Alabama Region. We would be glad to hear from anyone and everyone who can get in to the region.

Again glad to find this group and look forward to hearing you on the air,

73's
KG4OKM
Shawn

Good idea. I have some nice # 6 copper. May just give that a try.

Years ago there was a design called a 'HALO'. But it was smaller. Used aluminum plates at the far end of the feed point for 'loading' and some sort of a gamma type of match. Was not full sized. It was used for 6 meter mobile.

I will be getting my tower up this hear. Just moved to this QTH. I want to put up some omni directional stuff for general six meter monitoring. This may be the ticket.

Or you can stack them horizontal up a tower/mast. Space it 1/2 wave apart.
Using 70 ohm coax. Feed in center of the line. And you have 3 db gain.

Then stack another pair and you get another 3 db.

In many/most situations the problem with six meters and TV's is front end overload. Especially if you are trying to receive off the air signals on the TV.

Many TV's use a IF near the 40 mhz range. And of course Channel 2 and even fringe channel 3 can be a problem. Especially channel 2.

You didn't say what for the TVI takes. Does it blank ALL TV channels? Are you Off the Air TV? Cable? Satellite?

Does it bother only 1 or two low band TV channels?

Feed me some info, may can help.

Sure have. Works great. Just can't rotate or get any gain. Another thing of interest, maybe, is if you have a 75 meter dipole up, it will work on six also. In fact any lowband center fed dipole that has is an odd multiple of the fundamental may indeed resonate at six meters. Try it and see.

261. Loop ant.

Yahoo group: 6meter (2000 — 2003)
Date: 2002-01-08 19:28:58 UTC
From: n5wdd
Topic: 261 Message: 261

Hello everybody;

Name here is Steve N5WDD in EM22 NE Texas.

Just recently found this group and have been checking it out each night. Verry envious of the recent openings but work prevented me from getting on. With the talk of the loop ant. I thought I would kick in my two bits worth.

Got on 6m about a year and a half ago and did not have a horiz. ant for the band. Looked around and found a article on eham.com by K0FF for a horiz. loop made with .5" copper water pipe. printed it out and put it together. Works verry well I am happy with it and have another goinig together to be Phazed with the first one.

I have worked Mexico and Guatamala along with Perto Rico on it.
I can't argue with the results with it. Cost is about 10 to 15 or less if you have the copper pipe on hand. I know that it's not a 4el quad or yagie but it works.

Check out the eham article archives and try it out yourself.
P.S. He has plans for a 2m loop in there also.

Hello to the group,
My name is Lee. My qth is Yelm, Wa.(CN87) and I am new to this group AND 6 meters. I have enjoyed the band openings and have copied numerous stations in the NE USA. I am using a 6M magmount hamstick on a cookie sheet set in the flower bed. The match is 1.5:1 but it is only good for local contacts (20 miles) or listening to dx. I am in the process of putting up a RS extendable mast and a new antenna. It will be about 30 ft up. Thanks to all of the ideas I have recieved from todays posts, I now have many more choices of antennas than I thought possible. And, they will not cost an arm, leg or 1 of my grandkids. HI HI!! Thanks again to all of you.

Thanks Dan, I contacted the power company today. From here I guess it is a sit and wait process. It was so quiet over the weekend with the snow and ice and rain. I could deal with that. With S-9 noise level I can't stay on the radio too long. As you might imagine it is very noisy. I can't get any weak signals and QSO's are hard to say the least. I wrote down the ARRL John Phillips and will try to be patient. I talked to a couple of guys that are on the same power company power and one says he has no problem and the other says he has been playing the round robin game with the power people for 3 years. I hope I don't have to wait that long. Thanks again. 73s Rob.

269. Minor problem?

Yahoo group: 6meter (2000 — 2003)
Date: 2002-01-08 23:41:03 UTC
From: Lee Levine
Topic: 269 Message: 269

I'm looking to put a loop antenna on top of my dual band (2M/70CM) beam
antenna,
but I have a question about the antenna wire set up.

For my dual band beam I have one wire that goes to a T connector which then
connects
to the two different parts of the beam. What I need to know is can I use a
second T connector
with a wire that leads to the 6M Loop? At the radio end, I can use a
switch box to switch between
my dual-band radio and my 6M radio. I need to do it this way if at all
possible since I don't have the option
to run a separate wire to the 6M loop at this time.

Thanks for your help!

Cheers Andrew, Sorry about the rock. I have run a bunch of 4 ga copper with several 8ft ground rods. It helped the antennas a bunch but not the noise. Thanks again. Rob.

I have been dealing with Alabama Power for over 2 years. Actually nearly 3 now. I am done with them. I am dealing with ARRL and now the FCC will jump on them.

I hope you guys like it. Mine works well
A hint I did not have any sheet copper or brass to form
the L bracket for the so239 and the gamma match.
go to the local hardware store/home depot and get a brass kick plate
for a door gives you a lot of material for the loops and other
projects. Usually is a lot more square inches for less than
hobby shops

Rick,
I built this antenna. The kit was nice but I have had
better luck oon 6 on DX with my G5RV. Have not tried
it much on repeaters.

Your best bet is to use a duplexer, such as the Diamond MX62M, at the antennas. This will split the 6M signal from the 2M/70CM signal, routing each to it's intended antenna. It's not cheap, though, at $75. You would use the switchbox to select the radio you are going to use. Your other option is a remote antenna switcher, but that is even more expensive. The setup as you describe won't work. The Tee connector at the 2M/70CM Yagi is actually a matching harness, not just a simple Y. Perhaps somebody can tell you how to make such a harness for 50 MHz/144/440 MHz, I wouldn't even try. Really, you should run a seperate coax feed to the 6M loop, it's the best and cheapest solution.

From: unukalhai
Topic: 283 Message: 283

Hello Everyone,
I am new to this group, 6 meters and amateur radio. I received my callsign this past fall and have just gotten into 6m. I am using a Yaesu FT847 (I am also very interested in satellite work, hence the choice of gear), and for 6m I am using an M2 Antenna Systems HO Loop antenna mounted 30 feet up on an antenna mast. It works very well, and I have been able to work as far out as the Isle of Skye (Scotland) and Vancouver, BC from my location in New Hampshire, USA. It is a lot of fun! I am looking forward to meeting you on the air and here online as well. 73 and Happy DXing,

Well, it's gone now. It sounded clear as if local, but only registered little over an S1. Yet another mystery. I'd hoped it might be a far away beacon that would indicate an opening...but that was all I could get through all of 6 at around 4:15-4:30.

296. Excellent 6 Meter web Site

Yahoo group: 6meter (2000 — 2003)
Date: 2002-01-10 14:39:56 UTC
From: Joe Acevedo
Topic: 296 Message: 296

Greetings,

After monitoring this refelctor for a couple weeks, it certainly is great to see such interest in the 6 meter band. I want to pass along a site that is loaded with information regarding 6 meters, antennas, propogation, and even has a DX monitor that highlights VHF/UHF postings to make following openings on 6 meters easier. It is the San Diego Six Shooters Amateur Radio Club web site. The Six Shooters are dedicated to the promotion of the 6 meter band. Feel free to stop by and explore this informative and entertaining site. It undergoes constant update, so visit often. We hope it will help provide answers to questions you might have, as well as providing insite and a little fun as well.

http://www.netlynx.com/sdsixshooters/

On behalf of the San Diego Six Shooters ARC, I welcome your comments in our guestbook so we can continue to make this site as interactive and useful as possible.

Hope to hear you on six!

From: Kg4okm@arrl.net
Topic: 297 Message: 297

This may be old news to a lot of you out there but I have been using
this great web site to get real time information on 6m activity
http://6m.dxers.info
The site is ran by N1RZ has put together a fantastic web site full of
the best real time information about 6m activity that I have found.
Check it out!!!

Ron,
I got the freqs at a lot of different places, ARRL, BuxComm web site, Six Meters World Wide Six Club web site, etc. I tried to verify them at a few different sources before I placed them on my radio information web site at http://www.geocities.com/lordbane and on here. I failed to mention that the ARRL also lists 50.200 as a SSB calling freq but 50.125 is the international one.

If it were a beacon, it would identify at least every 10 minutes. What you are describing sounds like a scanner. They have a tendency to emit a continuous "beeping" in and around the 6 meter band, at least while they are in "scan" mode. They usually stop when they lock in on a station.

Hi Dan. Good to run into you again after our memorable "3 hour QSO" on 2m FM through Ohio and Kentucky. What has that been, 20 years ago now? :-).

My experience has been that an antenna that is multiple wavelengths of the operating frequency is actually not a very good antenna. Have you actually used a 75m antenna on 6? How well does it work? I agree that it could load up just fine, but I wonder about the performance.

> Polarity for DX-SSB operation ?

Keep in mind that ionospheric propagation completely distorts the polarization. So, while it is preferable to be vertical for FM, and horizontal for SSB/CW for local work, either polarization will be fine when you are working skip.

Another consideration is that a beam mounted vertically on a metal mast can have its radiation pattern distorted by the metal mast.

I have been at 6m for about 20 years, used a GEM quad for several,
about as good as your average 3 or 4 element beam, perhaps less
directional,
more adapt at combination SSB and FM work.

Rob, there's nothing wrong with the 5el Ccraft yagi. I have a chance
to bring it down to move the antenna to another spot. Since it's
down, I'm wondering if and what would be better gain and f/b to
replace it with.

I have used one before. But without a means to compare it with a 'real' six meter antenna I can't say if it worked well or not.

I do remember working some E-Skip with it, but what it was I can't say. Should work as well as a vertically polarized 'dummy load'. hi hi.

Rge on the 3 hour qso. Did we apply for the Real Rag Chewers Certificate?....Oh wait a minute. That needed six hours. Perhaps we could do it again. hi.

True, however most to all DX mode stations are using Horizontal.

Years ago I did some experimenting on 2m AM between vertical and horizontal polarization. I was in NE Ohio at the time. The other station was in NY.

We switched from horizontal to vertical with the same type of antenna's. I used homebrew 10 element yagi's. I forget what the other station had exactly.

What I determined was that most of the time it didn't much matter what the polarization was...as long as both stations used the same...however..in many many cases the path seemed to prefere horizontal polarization. I attribute this to the hilly terrain involved and that the wave will tend to go horizonal and follow the earth.

Just a bit of ham radio trivia from the early 60s.

Conventional "wisdom" is that at VHF and above, skywave signals undergo Faraday rotation anyway, so the cross-polarization loss is built into the path loss. Polarization only matters on groundwave or line-of-site paths, and there, it amounts to about 20 dB of attenuation. Anybody have any experience with circular polarization in terrestrial DX? Then I suppose you have to worry about right-hand vs. left-hand. "Ya know, it's always sumthin'."

Interesting. My GAP Titan is about 2-3 s units below my
Comet 4 element yagi on most ground path signals. If cross-
polarization is the primary culprit in the signal loss,
It's a real testament to how good the Titan works on 6 meters!

It is to note that the GAP Titan is not even advertised as
capable on 6 meters.

318. Gain Figures

Yahoo group: 6meter (2000 — 2003)
Date: 2002-01-11 22:50:40 UTC
From: Mark Tetrault
Topic: 318 Message: 318

Help me remember........

Gain figures posted as dbi decible gain over an isotropic radiator vs dbd gain over a dipole.

Am I correct that the isotropic radiator is a mythical standard and results in higher gain numbers than the dbd rating? Isn't the gain posted as dbd closer to reality.

Such as CCraft posts their gain figures for the 5el @ 10.5 dbi
M2 posts their gain for the 7el @ 10.5 dbd

So the M2 figures would be closer to actual, and CCraft is pushing the numbers to make it look good??

Still trying to sort this all out.

Mark

You have it right Mark. Subtract about 3 dB from isotropic to get the dBd,
a far more realistic real world rating.

You're right, Joe-

I wonder though if it is not as much of a problem with designs as
it might be an issue with the marketing department trying to sell
more antennas.

The only real way to find out without buying too many antennas to
test them is to go to www.eham.net and read the product reviews.

That is what I did before deciding to buy my GAP Titan antenna and
I'm glad I did as the antenna performs very well, even on 6 meters!

From: James Carlin
Topic: 318 Message: 323

Talk about picky....but if you really want to go nuts, figure in coax loss, antenna height, ground system, loss due to any switches you may have, and then if you have one of those lightning protectors that's more loss.

Bottom line is - a directional antenna will always best an omnidirectional antenna. But I think you really need BOTH if you really want to do it up right. A beam might miss a band opening because you have it pointed north or south, while the band is open to the east and west. I know that everyone has their favorite brand, but for the money CCraft is good. Their antennas use stainless steel hardware and elements (depending on size...larger antennas use aluminum because of weight issues). I live in south FL so rust resistance is VERY important (those of you who live in the desert probably do not know what this "rust" stuff is - you also have NO IDEA what "mold" or a "Palmetto Bug" is). M2 antennas tend to cost more per element than CCraft - and really 1 or 2 db gain in not a whole lot. If it really means a lot to you, get an antenna mounted pre-amp or something. As for yagi VS quad - Ill go for a yagi any day. They are less complicated, and have less of a wind load. A yagi might stand up to a tropical storm or minimal hurricane - but a quad will get twisted and mangled. I never have to worry about ice - but I would think that a quad is less resistant to the effects of ice than a yagi (more antenna area = more space for ice to build up = more added weight = more broken parts due to the added weight).

Of course - should a category 5 hurricane hit.....ANY antenna left up is history - but still Ill take my chances and go for a yagi. But this is just my opinion. I own a yagi for 2 meters, but like I said nothing (yet) for 6 meters that is directional (but I am looking at a 3 or 4 element beam for 6m).

A VERY cheap omni antenna for 6 meters can be made out of copper water pipe. I built a J-Pole out of this material and it works great. It only cost me $20 to build. I do not have a beam, but if I did I would listen with the J-Pole then swing the beam if I detected a band opening. I made a J-Pole calculator using an excel spreadsheet that I can upload to the file area if anyone wants such a program. Just enter the frequency in mhz, and all critical measurements are calculated in several different units. I used Excel 2000 to make the calculator, but it uses simple formulas so earlier versions of excel *should* work (but I never tested it on versions older than 2k).

OH yea one more thing....a local ham came up with a great idea to detect those band openings on 6m. Get a scanner (check the local radio shack for a closeout base scanner if you do not have one), program in some beacons you can only hear when the band is open, hook the scanner up to a J-Pole, and let it do its thing. If your sitting around the radio room, and you hear the squelch on the scanner break, you know something is happening. This is a cheap way to monitor the band, for closeout scanners can be found for $30 or less. Remember - you do not need something super fancy - all you need to listen for is FM beacons or distant repeaters. If FM is open, so is your favorite mode.

I was the copper yagi guy. I have a simple 3 element cut for 50.125 at about 30feet. (I also have a nice DIY quagi for 70cm.)

I need to put together a simple doc with some pics... time permitting.

I am planning on building a bigger antenna for this spring. Probably 5 or 6 elements otherwise the boom length starts to become too long for my site...(trees and such.) The new antenna will probably be aluminum because of strength needed for the longer boom length. Copper is too soft at that length.

For anyone that has questions feel to email me directly: john@...

I would not normally recommend this antenna but after
assembly and mounting, I'm sure it could withstand
the harsh environment you have. The antenna is the
4 element Comet 6 meter beam. It's one tough antenna!

329. Re: [6 Meter Sked] an antenna that will withstand high wind

Yahoo group: 6meter (2000 — 2003)
Date: 2002-01-13 01:00:29 UTC
From: James Carlin
Topic: 328 Message: 329

As a life long resident of South Florida, I can offer some insight. The MOST IMPORTANT factor is WIND LOAD!!! The larger the antenna, the more wind load it has, and as a result the more resistance to high winds it creates. Therefore, the antenna that has the LEAST amount of material will tend to do the best in high winds. The most likely to survive is a vertical, mounted on a strong mast, and guided with rope. It might look silly, but a guided vertical is one very tough antenna.

For a beam, I would recommend keeping the elements and boom length down to a minimum. If winds are a concern, for 6 meters you probably do not want to go with more than 4 elements. I would recommend against a quad, because a 4 element quad uses more material than a 4 element yagi. IF POSSIBLE the boom should be one piece, and made of something like aircraft grade aluminum (or some other strong, lightweight metal alloy). If you have to use a sectioned boom, make certain that the pieces are firmly attached together.

Lastly, if you KNOW a bad storm is on the way (as in my case...hurricanes arrive with at the least a few days warning), take your large antennas down. My hurricane preparations include dropping my antenna masts, leaving up only one short mast with a sacrificial 2m/440 compact vertical so I can keep in touch with the local hams until the repeater dies (then switch to simplex). I am lucky so far as I live only a few miles from the National Hurricane Center, so even with just 5 watts out on simplex I can talk directly to the people stationed there. My 6 meter home made j-pole survived tropical force winds last summer, but I do not expect it to live through a hurricane. It is 16 feet tall, made from copper plumbers pipe and unguided. But if it gets turned into a pretzel, I am only out $20 so its not that big a deal. IF I had an expensive 6 meter beam, I could certainly take it down and store it in the garage.

When you select a beam, look at more than advertised gain. Look at wind load and the maximum wind speed the antenna says it can handle. These figures are advertised as well, but marketing people like to hype the "DB Gain" as the most important factor.

> Anybody have any experience with circular polarization in terrestrial DX?

I do, on 2m SSB. I had a KLM 16C up for awhile. Circular polarization is recommended for OSCAR, and it does OK for terrestrial stuff as well. My experience is that, basically, it is like having a horizontal and vertical antenna in phase. Of course, the 16 elements are 8 horizontal and 8 vertical, so the gain characteristics are like an 8 element beam. It worked fine working VP9 and some New England stations during a sporadic-E opening a few years back.

341. Thanks Jamie

Thanks for adding the North Carolina Six Meter SSB Saturday Morning net to the calendar.

We're on 50.200 at 8:00 AM each Saturday. Get out of bed, grab a cup of coffee and fire up the rig. It's a great way to get your weekend started. We usually have 20+ checkins.

73,

Frank, W4FAL

Try loading it on 6 with low power BEFORE making any mods---I used to have a
PDL2 quad for 11 meters--It worked like a champ on 6 WITHOUT any mods :-)

Nice site. Too bad that no matter what I do I can't receive any thing on 6
Meters or
any of the ham bands on my Icom 746. I can, however receive shortwave
broadcasters.
Since I have no clue what I'm doing wrong I'm not going to worry about it
as I no longer care.

Enjoy

Just because you hear nothing on 6 meters does not mean you are doing anything wrong, if the band is not open you will not hear anything other than local stations. You should be hearing SSB stuff on the other HF bands though. The shortwave broadcasters use massive amounts of power so that is why you hear them (it is not uncommon for a SW station to have 500,000 watts ERP or more). You did not specify what mode you listen with, but if your looking for AM signals on ham HF you will not hear much, you need to be on USB or LSB depending on the band you are tuned into. Try 40 and 80 meters at night using LSB, you should be able to hear something. 20 meters is also a good band to listen to, I hear a lot of activity there on USB. I have yet to hear a peep on 160 meters.

Thanks, I'll give it a try.
I can never remember when to use USB and when to use LSB.
Just wish that after 15+ years of trying, I could learn CW so I could get
on HF.

From: Joe Isabella
Topic: 344 Message: 350

Incidentally, 10MHz & up is USB by convention. Below 10MHz is LSB normally. Newer radios default to the conventional sideband. However, if you're listening on the opposite sideband that's being transmitted, you're sort of demod'ing in "reverse" and you hear garbage. You should hear it, though. I wonder what you're using as an antenna. As long as you're not underground, you should be able to hear something on HF with a 10 foot piece of wire shoved into the antenna jack. Make sure your RF gain is set correctly and the squelch is turned down. Try 2.5, 5, 10, or 15 MHz AM -- WWV (or WWVB) transmits 10kW and can usually be heard on one of those freqs depending on the time of day...
Chin up Man!! You sounded a little down on one of your previous posts. :-)

Joe,
N3JI

357. RE: January VHF Sweepstakes

Yahoo group: 6meter (2000 — 2003)
Date: 2002-01-17 14:55:05 UTC
From: Kg4okm@arrl.net
Topic: 353 Message: 357

I have a list of some of the vhf sweepstakes grids and bands that they will be working this weekend. I am re-printing this (In part) from a VHF/UHF Mailing list that I get from Tom Shutters [k4fjw@...] who puts the list out.

Personally I will be on most of the weekend on 6m and 2m SSB and will look around for what ever I can pick up FM simplex on 2m and 70cm. I am going to monitor the call freq. but park on 50.165.00 and 144.250.00 going to also work SW on whatever I can pick up below 50.100.00. I am in em64rq I'll rotate the beam clock wise with 45 degr., Steps every 10 minutes or so. I will be working skeds out as I go.

Anyone that would like to sked a QSO I can be reached at kg4okm@....

GOOD HUNTING!!!!!!!!!!

January 19-22, 2002
Begins 1900 UTC Saturday, ends 0400 UTC Monday
http://www.arrl.org/contests/announcements/01vhfss.html

{This list starts out with the Rovers}

KB1EAA/R
Grids: FN42, 41, 31, 30, 20, FM29, 28, 27, 16 on Saturday and FM26, 17, 18, 19, FN10, 21, 32 on Sunday run & gun on bands ABCD 3 element Halo for 6 meters, and stacked HO loops on 2, 222 and 432 with 100 watts or lower for all bands.

KF4VZQ/R
Grids: EM85 Saturday and EM75; EM76 Sunday
6 meters
2 meters
220 mhz (a new band)
440 mhz
The frequency I'll use will be determined by the activity on each band but don't look for me on any calling freq. Everyone have a great contest and listen for KF4VZQ/R. I hope all you rovers have a safe experience and have fun.

KG9PF/R
Grids - EM59, EM69, EN60, EN50, EN51, EN61, EN52, EN62 on Saturday and EN52, EN62, EN53, EN63, EN54, and EN64 on Sunday.

432 MHZ 2 ea m2 9 wl antennas with 500 W
1296 MHZ 45 element looper and 10 W

Run gaasfet pre amp on 2, 432, 222, and 6 meters. If I can get an antenna for 902 before the contest will operate that band also.

Hey Everybody,

I am highly thinking of Dxing on the 6 Meter band....
is anyone using an antenna besides the one that came
with the VX-5R? If so, what type?

Hmm....the HT? I would imagine that ANY type of external antenni would outperform the HT RDL (rubber dummy load <<grin>>). Since there is not much time, you may want to whip up a quick vertical or J-Pole and use that for FM'ing. Don't think there is alot of DX activity using FM, but it is ALWAYS worth a try! However, the contest specifically excludes repeaters, so you'd have to try simplex. Most of the activity will be on the SSB & CW portions of the band.

With an external antenna, you should get good propagation even on FM. Hey, as many folks as should be on the air this weekend, you have a good chance of working quite a few folks!

As for the antenna, there are several good j-pole plans on the web. I have one, works like a charm. I used copper waterpipe and fittings to allow easy breakdown and transport (it IS 13' tall, after all).

Hope to hear you on the air!

Andrew
KG4GSC
(EM96, should be montaintop portable on 6, 2 & 70cm, if we don't get snow/ice Sat. AM)

Topic: 362 Message: 362

I will be operating Single Operator Low Power (SOLP) in the contest. I will be QRV on 6M, 2M, 1.25M, and 70cm on the following modes: CW - SSB - FM - WSJT/FSK441 - JT43
Look for me on the following frequencies/modes when I'm not working a sked:
6M:
50.098MHz - CW
50.135MHz - SSB
50.270MHz - WSJT/FSK441 &JT43
2M:
144.130MHz - WSJT/FSK441 & JT43
144.210MHz - CW & SSB
146.445MHz - FM (Will be monitored the entire contest)
1.25M:
222.080MHz - WSJT/FSK441 & JT43
222.110MHZ - CW & SSB
0.70M:
432.080MHz - WSJT/FSK441 & JT43
432.110MHz - CW & SSB

Now a word about beam headings on CW & SSB when not running a sked:
I will point the antennas and call CQ in the direction of the PRIMARY ODD minutes of the clock (5-15-25-35-45-55 minutes past the hour) dial as they relate to the azimuth for 10 minutes calling on the odd minutes listening on even minutes. (ie... At 15 minute past my antennas will be pointed 90 degrees. At 45 minutes past, my antennas will be pointed 270 degrees. etc..)
WSJT/FSK441 & J443:
1000z-1600z & 0300z-0800z daily will be spent on WSJT/FSK441 and JT43 when not running a sked. I will spend an hour on 6M, 2M, then 1.25M calling CQUE on 6&2M calling freqs. As listed above for 1.25M. Beam headings will be as outlined above.

I still have skeds available if your looking.

Please everyone, don't forget about us guys WAY out in the stix...HI

I've got the same problem - only one local transmission logged
despite continuous scanning for SSB transmission around the low end
of the band. Like Lee, I was beginning to wonder if my longwire with
a tuner was set up correctly. I understand that 6M is a fickle band
but it can get to a person waiting for an opening.

Still searching.....

73s,

David/KG6IRW

2 meter 5/8 wave will work just fine on six and so
much better that the rubber duckie. Had checksins
fron DM04 and EM34 in to the SW Okla net tonight from
EM04. Good copy for about 30 minutes.. Mike NH6CJ/5

Bob et al,

I started on six meters with a 9406X that I bought used for $175.

Some positives.... punchy TX audio; RX seemed pretty sensitive

Some negatives... analog frequency dial, no squelch, no noise blanker, a little "drifty;" and cw an optional accessory.

I had never operated six meters, so I was not aware of how much of a limitation the analog dial was....after all, six meters is quiet approx. 75% of the time and specific calling frequencies are utilized...used a freq. counter to make sure I was on .125.

I took about two hours for the permanently open squelch on a dead band (remember...75%) to annoy me. Of course, one can homebrew a squelch circuit...believe TenTec has a kit.

I tried to use the rig mobile....had to stop and turn motor off to operate due to lack of noise blanker...probably a kit or homebrew project there too.

Rig would drift a bit, and never seemed to completely settle down, even after being on for a couple of hours...not a major problem, but a minor inconvenience.

The cw adapter is an optional accessory which is interesting since 1/3 of the rig's frequency coverage on six meters is cw only (50.0-50.1)....another homebrew project?

That being said, if it had not been for the 9406X, I would not have become interested in (addicted to) six meters. I operated the 9406 with a 150 watt brick amp/preamp into a 3 element beam, and I had a pretty hot receiver and a respectable signal, but still wasn't sure what frequency I was on, and was driven nuts by the static.

The Ranger 5054 has definite shortcomings, and has proven to be controversial among six meter operators because of its origin and marketing, but I would think that it would be a far better investment as a entry level/backup/mobile six meter rig under in the $300 and below price range.

As they say...your mileage may vary, and this is just one person's opinion. Perhaps it can serve as "food for thought."

73,

Brad

I know exactly what you mean. I Never heard a single 6M
signal back home, and then stateside I kept working on a already nice
setup, FT-100 with M2 Halos on 6M 2M and 70cm, fed with LMR-400. Kept
thinking something must be wrong, could not even find a local to talk
with.

Since then I found out the setup is good, I was just listening at the
wrong times.

On a side note, I should be back in CN76 by the weekend, with 100watts
6M, 350watts 2M and 20 watts 70cm, on halos at about 30ft.

Hi, Bob,

I have one, including the cw option. Spring before last, I happened to turn it on during the spring sprint, and had a ball talking all over the East, Midwest, and mountain states region. I used a small MFJ 6M tuner to drive my end-fed Zepp, and a 40M half-sloper, and made something like a dozen contacts on SSB, without trying too hard. It was fun.

Then, one fateful day, I hooked it up to my 20 A. power supply with the polarity reversed, and cooked a diode and who knows what else on the main board. Yes, I know. Duh. Since then, I've been waiting to have the $ on hand to send it back to Ole' Miss for repair. Bought an IC746 just before Christmas, so I'm in less of a hurry.

Anyway, it IS possible to make some QSOs with this little radio, and a tuner and/or a good antenna. It's compact, and stingy with DC, since it only puts out a few watts, but it is a fun box when the band's open. A QRPer who backpacks up the mountain could do worse, I imagine.

Topic: 367 Message: 374

Bob, the '9406 is a really neat rig for the price. Yes, it's got some limitations, but mine works great.

I got one of the first ones when they came out several years ago and it drifted a bit even after a long warm-up. I called MFJ and they sent me some parts to change and it stabilized out.

I added the CW board and it works great. The sidetone sounds kinda chintzy, but that's no big deal for me.

The transmit audio gets great reports.

No external speaker jack. Neither of the speaker leads are grounded so if you wanted an external speaker jack you would have to float the jack.

No squelch, but somewhere I saw a circuit to add one.

The analog dial is a source of frustration when you call a station and they ask you to move to a specific frequency.

The frequency coverage is 50.0 to 50.3 MHz, but that's where most of the action is when the band is open anyhow. My classic Icom 502 only covers 50-51 MHz but that was never a big deal.

It has a connector with a PTT relay dry-contact NO output key an external power amp. (I've personally never cared for RF keying of external PAs so that's a plus to me.)

Good DC power consumption numbers for battery operated portable use. Beats the power consumption for my FT-817, but then that's an all-mode, all-band, gee-whiz rig.

All in all in my personal opinion it's good value for the price.

I am highly thinking of Dxing on the 6 Meter band....
is anyone using an antenna besides the one that came
with the VX-5R? If so, what type?

****

Don't know where you're located, Sidney, but if you're going to operate during the contest on FM only, I'm afraid you're probably going to be disappointed. A majority of the contest activity will be SSB, CW, and maybe digital. There isn't that much FM activity on 6 Meters. You will work infinitely more DX with SSB & CW on the low end of the band. Look around for a used rig with SSB & CW capability to really enjoy 6 Meters to its fullest.

This is not to discourage you from giving FM a try ..... anything can happen on The Magic Band. An outside antenna always helps a portable unit. Give it a shot!!

376. Fwd: [6 Meter Sked] Beacon list for 6 meters

Yahoo group: 6meter (2000 — 2003)
Date: 2002-01-18 16:54:31 UTC
From: k4uft@aol.com
Topic: 376 Message: 376

David, you might try a simple half-wave dipole (56" on each leg) and see how it works compared to the longwire and a tuner. A long wire at 50 mHz can give some really squirrely radiation patterns even though it's matched to the rig with a tuner. (Remember that the tuner just makes the transmitter PA happy.)

Listen down in the CW sub-band for beacons. Listen and call on 50.125 SSB a lot. Listen and call on 52.525 FM simplex. Even try listening and calling on 50.400 AM !

You're right, 6 Meters can be fickle, but when it opens it's really great. I've been on 6 for more years than I want to admit and never had a big gun station or got DXCC, WAS, VUCC, etc. but the band has given me more enjoyment than all of the other bands combined.

Bob:

I was referring to some recent posting on other forums (specifically QRZ.com) regarding Ranger's possible culpability in the increasing amount of illegal operators on 10 meters, and the manner in which the Ranger radios are marketed..ie sold at truck stops and CB radio shops. There have been reports of illegal FM operation in the six meter band which some have assumed is being caused by truck drivers who have purchased 5054's....

379. Re: [6 Meter Sked] 6m entry level rig

Yahoo group: 6meter (2000 — 2003)
Date: 2002-01-18 18:16:34 UTC
From: James Carlin
Topic: 379 Message: 379

On VHF, "all mode" is not cheap. At the local hamfests in Miami, even an old used 2 meter monoband all mode rig is at least $500. Personally, I think this is way too much money, but these rigs do get sold. Therefore, I would recommend the Icom 706 MKIIG. You can get these rigs brand new for something like $850. This will give you SSB on 2 meters and 440, but here in south florida 2 meters USB is dead. It will also give the new guys access to all the action on 6 meters, and as an added bonus they can listen in on ham HF and shortwave world band stations - which could light a fire to upgrade the license.

Option B is buying a used FM only 2 meter / 70 cm rig, and a new Ranger 6 meter (all mode) rig to go with it. But before you go this route, check prices - you might find that for the same amount, or close to the same amount, you can get the 706. It all depends on how much the used rig costs.

Finally, you could forgo 70 cm, and buy a monoband FM 2 meter rig and the Ranger. This should put total investment to the lowest amount while still allowing the new guys to enjoy ALL of 6 meters, and also be able to get on the 2m repeaters. If your local area has more activity on 70 cm than 2 meters, then suggest forgetting about 2m and go for 70 cm.

I know someone who has the Ranger 6 meter rig. It has a digital tuner, and all the basic things a radio should have as far as control knobs go - but it only has 25 watts out while the Icom 706 will give you 100 watts out (on SSB - on AM and FM mode the 706 will not do 100 watts). Audio sounds good, price is good..there are good things going for the Ranger 6m rig - but power out is limited. That is the one thing about that rig that I would like to see changed.

From: James Carlin
Topic: 367 Message: 380

And how exactly is this Ranger's fault? Many truckers are legal hams, so why cant truck stops sell ham equipment? I have never been asked to produce my license to buy any equipment. I have bought from the big suppliers - mostly AES and Ham Radio Outlet. At the hamfests, if you have the cash you can buy the equipment. The 160 watt 2 meter FM/SSB amp I bought at the AES Orlando store without needing a license. So who says the illegal operators buy from the lowly CB shop - they could be operating on anything, and maybe they bought their stuff from a big mail order supplier. It is VERY easy to modify the Icom 706 so it will transmit from 100 khz all the way to 176 mhz. Where is the bad press for Icom?

Blaming Ranger because people of illegal operators is a lot like blaming gun makers because some crazy nutcase shoots up a school, or blaming chevy because they make a Corvette that goes "too fast". If anyone is to blame, it is people that sell ham equipment to unlicensed individuals - not the companies that actually make the equipment.

James et al,

I wasn't aware that I had posted an opinion regarding Ranger's marketing and sales...I was answering a gentleman's inquiry as to why there is some controversy about the rig in some circles. I would refer you to QRZ.com for a rather lengthy thread in which this issue was argued, and argued....and argued. The thread was active two or three weeks ago. I am not aware if the discussions are archived for more than a week or two though.

My only comment regarding the Ranger 5054 is that the TX and RX frequencies on rigs owned by two friends are offset, and the value of that offset changes with time. When they tune to another station, their TX is off frequency. Otherwise, they are happy with the rig. It would seem to me that the 5054 has a better feature/price ratio than the 9406.

73,

Brad

Check the threads on eham.net and qrz.com concerning the FT100, FT817, IC706x, IC746, IC746 Pro and other like rigs. Also, searching www.google.com for each applicable model name will return a lot of good info and groups.

From: k4uft@aol.com
Topic: 385 Message: 385

What's considered an acceptable price for an "entry level" rig? (Not being sarcastic, just asking)

Multi-mode multi-band rigs are a bit pricey and I'm not aware of any that are 6, 2, & 432 only. Ten-Tec has one for 6 and 2 and it's over $600.

A used older Icom 706 Mark II or a Yaesu FT-100 would give VHF/UHF as well as HF. With the 706 Mark IIG and the FT-100D being current production rigs the older versions run around $500 or so on the used market.

If you're located in 5-Land try listening to the trader's nets on 7245 on Sunday mornings and 3922 on Friday and Sunday nights. Lots of stuff floats through there.

386. 6m entry level rig/Swan

Yahoo group: 6meter (2000 — 2003)
Date: 2002-01-18 22:38:43 UTC
From: MadDrewski@aol.com
Topic: 386 Message: 386

If anyone is wanting a good 6M rig, my venerable Swan will be going up for sale. This rig has the external VFO....no drifting!! (Swans were renounded for drift due to their hollow state VFOs internal to the rig...this is a solid state external). Works FB, has a recent set of finals, comes with an extra set, as well as the PSU3 powersupply/speaker.

Make me a reasonable offer... if you want to hear the rig, it will probably be on the air this weekend, I'll use the FT736r for spotting only on 6m, as it will be on 2/70 cm most of the time (and the 736r is only 10w out, darn it!).

Cheers;

Date: 2002-01-23 08:51:52 UTC
From: Jamie R. Dean
Topic: 396 Message: 396

I've been hearing a few of the new RCI-5054's on the air. I have noticed that the transmit is off freq. on everyone I hear. Has anyone else noticed this?? Is this another case of you get what you pay for? I remember hearing the RCI-2950 10 meter rigs and they always seemed off freq too. Is this a Ranger problem? If you own the 5054 let us know what you think about the rig. If you have heard it on the air did it sound off freq to you??

Hi Jamie,

As soon as the RCI-5054 came out, I purchased one to put through the paces. As president of a group dedicated to promoting 6 meter activity, I was excited that Ranger was finally providing an affordable alternative for hams to operate on 6 meters, and wanted to get the feel of this rig. Keeping the price in mind, I knew going into the deal that there were going to be compromises made by the manufacturer to get this radio into this price point. Expecting it to perform like my IC-706MkIIG or my FT-847 would be unrealistic and unfair.

When operating the RCI-5054, I did receive reports that the radio may have been off frequency, however, that did not stop me from working 32 states with it. Besides, I have heard plenty of other operators off frequency with their Kenwoods and Yaesu's and Icoms. The performance of this radio was satisfactory, and yes, you got what you pay for, but remember, there are hams out there that can only afford this radio. I personally applaud Ranger for producing a radio that has opened the gates for many hams to finally experience the 6 meter band.

In a perfect world, we'd all be operating the big rigs, but that is not reality for many out there. The key is to make the most with what you have, and most of all, to have fun doing it!

Question....does this radio have a 'clarifier (rit) ?
If so..then find some local. Strike up a QSO. He then gets DEAD ON YOUR SIGNAL and you simply adjust your RIT to make him sound right. Mark it and leave it there.

If no RIT, then you will need to go inside and adjust things.

Dan/W4NTI

From: Kevin Gundlach, N1PNR
Topic: 396 Message: 399

I think the problem is that it has a knob to adjust frequency up of down 2.5KHz, and either people don't know how to use it, or don't set it properly. If you leave it turned one way or the other, you will always be off 2.5KHz from the frequency the radio is set on.

400. RCI-5054

Yahoo group: 6meter (2000 — 2003)
Date: 2002-01-22 22:38:08 UTC
From: Marc Gagnon
Topic: 396 Message: 400

Hi all.

I have a Ranger RCI-5054 since August 2001 and for the moment i find any problem. I made QSO via many kind of propagation and i never have a comment about my audio.

But i always make mistake with the clarifier, it's the only thing to do attention.
In SSB for my rig the clarifier should be at 12 o'clock and on CW at 7 o'clock.

Whith these small rig with 25 waytts i take contact with europe, west coast USA, caraibe and alaska all the time when propagation is there.

For $300, us if you find another rig with more than Ranger RCI-5054, buy it !

Best 73.

Marc VA2MGL

401. Ranger 5054DX 6meter radio

Yahoo group: 6meter (2000 — 2003)
Date: 2002-01-23 00:44:13 UTC
From: wx4v
Topic: 401 Message: 401

Hello to all, I just bought one of these radio's just last weekend. In a little over a week I have worked 12 states (including the West Coast) and Europe on just a dipole at 36 feet. The clarifier on this radio is a little touchy and takes a little bit of practice to get used to. This Radio is nothing like my Yaesu FT-1000MP and I don't expect it to be. For $300 or less you can't find a better radio for what it is intended to be. This radio was designed for entry level to 6 meters and it fits the bill.... My first HF rig was a Yaesu FT-840 and I thought that was astounding working Mongolia on 15 meters CW. I bought the FT-1000MP it was like going from a Yugo to a Rolls-Royce... Sure, if you pay the big bucks your going to get a better radio and more bells and whistles. But, if you want a simple radio to work 6 meters, you can't beat the Ranger.

From: Jamie R. Dean
Topic: 402 Message: 402

It's great to hear all the comments on the RCI. Seems alot of you have the rig. From what I am hearing it would seems that it takes a little work to get used to the clarifer but once you do the rig is a very capable rig. I do have a question to the ones that own the rig. Where do you find a tone board for the rig and about how much are they?? I have checked the web sites of HRO and AES and they don't have them listed. That would be a hold up for me in buying the rig since almost every 6 meter repeater in my area is toned.

I installed a ComSpec TE-32 from HRO ($49.00) and it worked fine.
Installation was a little tricky, but worth it if you really want to work the
repeaters.

404. RE: TONE BOARDS FOR RCI-5054

Yahoo group: 6meter (2000 — 2003)
Date: 2002-01-23 20:45:34 UTC
From: Kevin Gundlach, N1PNR
Topic: 402 Message: 404

I can get you the board for $40 if you want the one you have to set with DIP switches inside the radio, or $60 for one that lets you change the tone without having to open up the radio. If you buy the radio and board at the same time, the factory will install it for no extra charge. As far as I know, I am one of few, if not the only, Ranger dealer that offers the boards as a factory-installed option. I sell the radios for:

RCI-5054dx - $289
Radio with internal tone board - $329
Radio with externally controlled tone board - $349

Radios include microphone, power cord, mobile bracket, microphone clip, hardware, manual and 2 year factory warranty.

Shipping is $10 anywhere in the US. I'm told by my factory rep that these boards, especially the external version, are in short supply, so first-come first-served.

If you are looking to do JUST repeaters, I also sell the PR-52 - 6 meter handheld from PRYME/ADI for $179.95.

Bill, I'll try to get home (5:30 to 6:00 pm) and get the FT736r cranked up and the antenna pointed your way to see how yoiur new rig sounds. BTW, you might also want to try 50.125, few more folks listening there (In my area, 50.110 has a cable tv harmonic sitting square on 50.111....Murphy's Law.)

Cheers;

Jonathan, I can't speak specifically for the 817 (which seems like a nice rig, BTW), but I have worked quite a few countries with the 10 watts from the old DX70T I have in the car (I carry a J-Pole, set it up when I'm stopped. Amazing what you can hear from a 4000 ft ASL ridgeline.) If you need some more "ooomph," look around for one of the Mirage amps for 6M. 12VDC power and around 80 watts out with 5 watts in (160 out/10-12 in).

When 6 is open, 5 watts will do quite well...not a "pileup buster," but you can be heard.

BTW, if anyone has a need for a fixed station amp, I have a tube unit for 6M....around 80-100 out with around 10 watts drive. $80 shipped CONUS. Runs on 110VAC, so not a mobile unit.

Topic: 417 Message: 417

Hello Jon, I have had great luck with my ft 817 during the many recent openings. I work mainly cw, but fone with the 817 is great. 5 watts is plenty of power if the band is open. The 817 has a GREAT receiver and as we all know..."you can't work 'em if you can't hear 'em". I also use it to monitor the calling freq., that all mode squelch works great.Also, I have worked Maine (from Michigan EN56) with the six meter duckie, and have the qsl to prove it...Great rig, and they will have to put a little shelf in my casket for it!!! Vince KA8FFM EN56qc Mich.

Hello,

Has anyone had a good deal of success working 6 mtr dx
with the FT-817 before? I can finally get on 6 mtr, i
got a 817 and its the first radio i have had with 6
mtr capability on it.

73,

Jonathan

Too much info!! "Voices from beyond" Movie "Frequency" ... Uhmmm....."hope the palm reader/crystal ball gazer has a decent antenna and rig! Otherwise, she won't be able to contact you!"

And how the heck do you send a QSL card??? (Uh.....don't answer that one!!)

Definitely in a weird mood today.

Andrew

This is just a quick note to let everyone know we are up to 257 members in the DX group. I feel this is good since the group started in November 2001 just 3 months ago. it shows the large interest in 6 meters. For those of you that have told your friends, thank you. For those that haven't please do. Remember the more people we get in the group the better the msg threads and the more DX info.

Here Here! It's really nice to be a member and watch the band
openings turn into msg traffic in real time. I used to have to
monitor 50.125 constantly, never knowing if my 4 el beam was
pointing the right way or not. Now, it's quite a different
story!

Jamie thanks for creating such a great group!

I have just started to run the 6 meter band. I picked up an Alinco DX70TH used (barely) with a warranty at a good price. Though it gives me the incentive down the road to pick up a higher class license it allows me immediate access to all modes in 6 meter at 40 watts AM and 100 watts FM and SSB. Now I only have to find the time to sit down and use it.

You made a good choice of rigs. I have had one for years and think it is the best. Programming in your most likely frequencies for action is another plus with this rig. Even if I only have a few minutes I can blast through my favorite freqs and get a cool contact and get on with the un-important things of the day. Enjoy, Rob KD4YOL

Whip up a quick "plumbers friend" and get on the air! Band's been a bit dead as of late, but summertime is not that far away. J-Poles are easy to build, quite efficient for their cost/occupied space, and will get you on the air. Mine took 70 minutes to build...would have been less, but I built mine to be disassembled for transport. Tough to stick a beam & tower in the trunk of your car for remote fixed operations. If you've the space, DO get a beam. Makes a lot of difference, esp. for DX.

I know alot of you subscribed via e-mail and not the web site. I have found a way to give you a little more control over your mail settings, if you will send a blank e-mail to 6meter-help@yahoogroups.com you will receive an e-mail back with instructions on how to go from normal mail to digest mode or vice-versa, to suspend your email for a amount of time so you can go on vacation or just want to read them on the web site and a few other things. I hope this helps the e-mail only members if you have any questions that maybe I can answer personally please e-mail me back at 6meter-owner@yahoogroups.com and I will reply ASAP.

I find that it is a simple radio to run. I can mix up the local repeater FREQs in one memory and the Dx stuff in another, Next chore is to figure out how the grid square system works. As for an antenna for now I have a simple ham stick. Another ham (the one who got me interested in the hobby) is whipping me up an antenna for it.

Hi All,
This morning (between 17:50 and 19:00 zulu), I managed to work grids CN84 and CN87 (Oregon and Washington) from my driveway. My QTH is EL87 (Bradenton, Florida), and I was running QRP (5 watts) with my Yaesu FT-817 through a mobile 10m mag-mount. After 19:00, the band died. I'll be monitoring for future openings throughout the weekend.

442. Log Perodic Antenna for 50 - 500 mhz

Yahoo group: 6meter (2000 — 2003)
Date: 2002-02-03 05:41:16 UTC
From: James Carlin
Topic: 442 Message: 442

I noticed that Crustcraft makes a nice log periodic that seems to be a VHFer's dream. The antenna will cover all frequencies from 50 - 500 mhz on one feed line. Max power is 300 watts. The thing can be mounted horizintal or vertical.....but Im having visions of horizontal setup.

Anyway....does anyone know anything about this antenna??? Has anyone used one? Does it really cover 50 - 500 mhz with an average SWR of 1.5? This sounds way too good to be true - one beam antenna that covers 6m, 2m, 220 AND 440....there has to be a catch....

From: George Matyaszek
Topic: 435 Message: 443

Alex,
since I purchased it in June 2001, it's been working quite well when
the band opens up.
The antenna takes less then 5 minutes to put together, and it's now
mounted on a 20ft
mast (30 feet above ground) between a Par 2m stacked omni. If you visit
the
www.parelectronics.com website, you'll see a photo of the exact setup I
have here.
Having the 6m antenna between the stacked 2m has no effect on one or
the other.
They're rated at 150 watts and well constructed. Part of my decision on
getting these
was the good reviews on www.eham.net, talking to locals hams and a
decent price.
Last Thursday, I was able to work Scotland on 50.182 using 90 watts on
a IC-746.

The catch is 4.5 to 6.5 db gain as compared to a 3 element 6m at 8 db gain, 5 element 6m at 10.5 db gain and a 10 element 2m at 13.2 db gain. Less gain for the money.

452. All quiet in EM95

Yahoo group: 6meter (2000 — 2003)
Date: 2002-02-05 15:05:59 UTC
From: Jamie R. Dean
Topic: 452 Message: 452

All is quiet this morning in EM95dr. Can't even get any locals. I'm missing the great openings we had in Dec. I'll be monitoring for about the next 2 hours on 50.125 with beam towards the East. After that I switch west on 50.125. Maybe today will be a good day to work on my WAS (worked all states) I have 20 more states to go. I know Hawaii is gonna be hard.

Its pretty quiet here in EM50nj I live about 80 Miles from the nearest
repeater and weather conditions what they are I can kerchunk it with one
watt. I guess thats pretty favorable. I dont know I just got my 6meter
rig 2 weeks ago. well 73's and good DXing.

Hugh,
Try http://groups.yahoo.com/group/6meter/files/6mskedSealTeeShirt.jpg
This will give you a reverse copy of the seal proper size to print with an ink jet printer to tee shirt transfer paper. Hope this is what you were looking for.

465. Calling Freqs for Different Modes.

Yahoo group: 6meter (2000 — 2003)
Date: 2002-02-07 17:53:58 UTC
From: Jamie R. Dean
Topic: 465 Message: 465

I have done the research and created a web page that lists the different calling freqs on the VHF-UHF bands in many different modes.
The page is at http://www.geocities.com/lordbane/hamcall.htm please check it out and give me your feed back.

73 and Good DXing,

Jamie R. Dean

Ron,
I may add 10 meters in the future. At this time I noticed that there just wasn't alot of information on freqs. for the upper bands. Thanks for taking the time to look at the page.

Topic: 454 Message: 469

Mike,
Hello from EM-06, I have not had alot of luck recently with 6-meter contacts. The band seems to be wide open for the rest of the US. But if you got 41 so far, it is possible to WAS. I got two KS contacts from the January VHF weekend. Are you going to be on the air for the OK QSO party?
Dave

Hi Dave,

I am also located in EM04, as NH6CJ is, and I can use
EM06 on 6, 2 and 432 if we can set up some sort of
sked. Let me know what times this weekend would work
for you. Probably sunday would be best for me, might
go to OKC on saturday. I am running a Kenwood TS2000
barefoot to 3 elements on 6, 13 elements on 2, and 16
elements on 432. Barefoot is 100 watts on 6 and 2,
and 50 watts on 432. WOrked EM07 on all three bands
last weekend, so should not be much of a problems.

Topic: 454 Message: 471

Hi Dave.

There is quite a bit of 6 meter activity from EM04. Donnie K5CKQ worked Hawaii for number 50 about 2 weeks ago. It fact if will be 2 weeks ago this Aunday. He has been needing KH6 for # 50 for about 4 years. He is the only one that I know of in the local area that has worked them all. There are at least 3 of us that have 40 plus. Don NL7CO needs KL7 and KH6. So yes it can be done. I have 4 KL7 stations confirmed now. Hope to finish off WAS on 6 this year. Maybe the June contest and field day will do it. Have 60 ft tower up and hope to get ant's on it this weekend. Worked all 41 states on a vertical and 100 watts. Staying with the same power but going to a full size loop for listening and a 3 el beam as main 6 meter ant. Yes on working the QSO party. Hope to hear you on several bands. I do need EM06 on 6 meters. Have 165 grids confirmed now. Best of luck on the magic band and don't give up on it.

no not a thing. My wire dipole antenna is only 20-25 feet high
horizontal the feed is to the south.That's the highest end.
When I get some funds Im gonna put up one of those Radio Shack Discone
antennas. Got the antenna just need a pole and a coxa.

Well Don, that depends upon how you would define "just as good". Does 6 meters open up for DX as often as 11 meters? No, it does not. Is 6 meters better than 11 meters for DX? Absolutely!!! You see, 6 meter dx is missing something that that 11 meters has, and this "addition through subtraction" makes 6 meter dx more enjoyable any day of the year. Six meters lacks the "moron factor" that is so prevalent on 11 meters. No nonsense on six. No noise toys, or chaos. No offense to you, Don, as I am sure that you never venture off the allotted 40 frequencies that have been established for the Class D communication service established by the FCC, however, there are many that do venture beyond the e 40, operating in what they like to refer to as the "freeband". But then again, when you throw in the "moron factor" you ultimately wind up throwing out the rules.... Don't you , Don? Have fun on 11 OM, but for me, it'll be 6!

Yawwwnnnn...BOY, was it quiet! At least I got the 432 antenna finished and the preamp set up. Wasn't going to have any QSOs on 6 out of EM96, that was for sure!

Anyone have better condix around? Wet and cold here. Either no one on the air, or the antenna fell down. <<grin>>

497. Anyone having any luck??

Yahoo group: 6meter (2000 — 2003)
Date: 2002-02-15 07:38:00 UTC
From: Jamie R. Dean
Topic: 497 Message: 497

I've noticed the group has been quiet the past few days. I'm guessing this is a sign the band has been really dead. I know we couldn't beg for band conditions here in EM95dr. If any of you have had any luck please post a msg and let us know. Any good news about 6 meters keeps interest up and people wanting to use the band. Remember during times of bad band conditions we can still talk local on USB farther than 2 meters FM or sideband. So just becuase you can't work Europe, Canada, South America, etc doesn't mean the band is not good for local talk up to 100+ miles away. So when the band is quiet get a friend or 2 or 10 and go to SSB or if all you have is FM go to it and have a ragchew. It might just be what you need to get a DX contact going. You never can tell when the magic band will open, so if your not there you may miss it.

Here's an idea to consider. Why not try for a sked from different parts
of the country on
different nights (after 9pm cst (0300 utc). For example,

Mon: Northeast
Tue: Southeast
Wed: Midwest
Thu: Northwest
Friday: Southwest
Sat: Alaska
Sun: Hawaii

499. Listen beacon

Yahoo group: 6meter (2000 — 2003)
Date: 2002-02-15 13:31:19 UTC
From: Marc Gagnon
Topic: 499 Message: 499

Hi all.

It's true the propagation is dead !

But maybe in few moment of the day it can have some opening on 6 meter, also i think all the 6 meter operator should listen between 50.000 and 50.100 mhz and try to copy one of the numeous beacon on the air.

By listening beacon it is the only way to verify if the band is really closed.

To help you, this is the best list of the 6 meter beacon across the world with all the necessary informations to know on the beacon.
http://www.keele.ac.uk/depts/por/50.htm

Hoping an other good opening period on 6.

Best 73.

Marc VA2MGL/B2
50.0155 mhz

Topic: 501 Message: 501

So how come we can make DX Qs when the beacons are nowhere to be heard? I use the same list. Have worked four continents since fall, using an Alinco DX70-TH w/100 watts to a vertical dipole at 30 feet. Very first was Costa Rica, followed right away by Galapagos (what a rush!) then numerous Alaskans. Several Greenlands, Scotland, and the Canary Islands were neat too.

What is the best way to make state contacts, contests? I know Hawaii is the hardest from 9-land.

The OM gave me an Ameritron AL-80 HF amp for Christmas last year. We added a Ten-Tec Centaur because of the better QSK capabilities.

Is it possible to convert an AL-80 to 6 meter use? If so, what is the procedure or does anyone do that work?

Everyone should take a look at this site:

http://6m.dxers.info

It offers real-time mapped plots of 6m contacts, and contacts that have take place in the last hour and last two hours. The map plots are based on DX Cluster spots world-wide.

The site is run by Tim, N1RZ, and it's a great resource for 6m operators. The site is funded strictly by donations so if it's of value to you please send him a couple bucks.

Also:

http://www.dxsummit.com/

DX Summit lets you see and post DX Cluster spots. In the left column select "Custom Spots", then "50 MHz" to see only 6m spots.

Finally:

http://dx.qsl.net/propagation/propagation.html

This page collects all solar and geomagnetic information on one page. Sun spot numbers, Solar flux, and aurora information is all there!

Tim's site is nice. The dx maps are extremely helpful but be perpared to hit refresh alot due to the nature of his servers getting over whelmed and the page not being able to be displayed.

509. Another quiet day on the magic band.

Yahoo group: 6meter (2000 — 2003)
Date: 2002-02-19 17:18:46 UTC
From: Jamie R. Dean
Topic: 509 Message: 509

And so we have another quiet day on 6 meters. Will the goddess of DX ever grant us band conditions again?? I guess for now we just sit and listen to the soft sound of static waiting for that weak signal from far away to tickle our speaker. We do know it will come. It always does. When you least expect it Europe, Japan, South Africa or a number of other great DX locations will make you rig come alive. We must have patients to sit and listen. What good is DX if no one is there to work it? Don't forget call CQ once in awhile. And be sure to swing the beam in all direction when calling. If your beam is to the east you may not hear Hawaii if they come in and they will not be able to hear you CQ.

Anyways, what do all of you DXers do when conditions are down?? Do you go back to 2 meters? HF? Tell us what a hard core 6 meter DXer does when there is no DX to be found. I talk on 2 meters, listen to SSTV and PSK31 on HF. I also applied for my Air Force MARS license. But my favorite thing to do when conditions are at a low is talk on USB on 6m to a friend of mine a couple of counties away. We experiment with digi-modes on 6m also. PSK31, SSTV, MFSK and Heilscriber so far. Would love to find more people that would like to experiment with digi-modes on 6 meters SSB in the EM95 (Western NC) Area.

Use 6M SSB for local communications. The activity helps keep many interested in 6M, and helps many realize that 6M isn't all about DX... DX is an added bonus to a band that outperforms 2M any day of the week. Establish local nets, rag chew sessions, anything to keep activity on 6M alive. Think of what a great surprise it is when you use 6M constantly, and someone pops in from out of the blue from across the country. DX is great, but it isn't all that 6M is about.

Didnt know you were a poet too. Dont know what everybody else in my
neighborhood does.there never on 6 except for net night. Ive had this
rig for a month now and talked to only 2 people on the repeater. And it
nots conditions either. The weathers got to be relly bad to not be able
to hit the repeater with more than a watt and its at least 80 miles
away."Endevor to persever" i guess LOL.

Here in the Northeast we do "6-AM at 6am"; 50.4MHz every Sat. & Sunday (and Holidays) mornings.
In addition, I also participate in a New Hampshire net at 8pm on Wednesdays and Saturdays....also AM.
There is some 2-M AM activity but nothing like 6!

I've been wondering how PSK31 (a "weak signal mode") would do on 6. I have
a Rigblaster on my 746, ready to go. Let me know when you guys want to try
it out!

73,
Tom, KA5NEE

Tom,
Being a Tech operator and not having HF privledges I bought the Rascal from Buxcomm just to do digi-modes on 6 meters. I have noticed in my experimenting that with psk31 I have worked a station I could not hear with my ear, but the software picked him up and we made a good contact. The hardest part is to find people to do the digi-modes with. Seems when conditions are in everyone is on voice and when the band is dead everyone is else where. But if you or anyone else is wondering I have searched the net and talked to alot of weak signal ops, from the information I have found I have compiled a list of calling freqs for the VHF-UHF band for voice modes as well as the most popular digi-modes you can find this info at http://www.geocities.com/lordbane/hamcall.htm

BTW I'm really into SSTV, Maybe if we get a band opening your way we can try it. SSTV is by far my favorite out of the digi-modes, only thing is it doesn't travel like PSK31, Heilshriber or MFSK. But I still feel it is neat to watch the pictures come off the air waves.

73 and Good DX Hunting,

Jamie R. Dean

I am located in EN35. I am generally home in the evenings if you would like to try to make some noise. I think that we are probably too far apart to make a QSO without an opening or AU. I would be interested in trying it out regardless.

I have yet to hear *ANYTHING* on 6 meters.
All I get is static.

Jamie and John,

I'm done in from cutting firewood tonight, but if you want to pick a frequency, I can try it starting tomorrow night. I suggest we call CQ at the same interval over a couple of hours (schedules permitting), like they do in Meteor Scatter, but no need to be on-the-money precise... Say, one of us calls CQ repeatedly for five minutes starting on the hour, then another, and then another... We might get more people trying, that way. I've heard the same thing about copying down-in-the-noise signals even if you can't hear them with PSK31, but I haven't had any QSOs like that. Another idea is to try on weekends at several times of day, with the same sort of system. Any other ideas? I have some vicious birdies -- computers, cable TV, etc. -- but I can notch them unless they really scream.

Any starting frequency suggestions?

Tom,
I would really like to work you on PSK31 but to work ground wave from NC to IN even with PSK31 is almost impossible. I only have 100watts into a 3 ele beam at 35 ft. As this is not the station to work you on 6 meters ground wave it is a perfect station to work you on PSK31 with even a very weak band opening in your area. I monitor 6 meters SSB a large portion of each day and sometimes night. If I notice the band opening in your direction I will first post a msg to the group and then I will try to get with you on PSK31. I've basically noticed with my station and being blocked by mtns to the west I can get about 60 miles west PSK31 and about 40 miles voice SSB groundwave. To the south I can get about 100 miles voice SSB ground wave and haven't found anyone to try PSK31 to the east I can get over 100 miles voice SSB ground wave and still no takers in that direction PSK31 to the north most I've got groundwave is about 75 miles voice due to more mtns. and once again still no takers PSK31. Right now my FM station is down due to needing the coax to put up a dipole for Air Force MARS. But I hope to fix that problem soon.

73 and Great DXing,

Jamie R. Dean

521. PSK

Yahoo group: 6meter (2000 — 2003)
Date: 2002-02-19 03:40:42 UTC
From: John Hoaglun
Topic: 521 Message: 521

I think that PSK is about 50.290. How about we call it 50.300 for a nice even number? I am generally open in the evening (about the same time the band is closed up :)

I think that we have a very good chance to make some QSOs on a weekend. Normally the die hards are listening on 6m around 8-10am CST. If there is going to be an opening we generally know by 10am.

The other item to remember is that with PSK most radios are not rated at 100% duty cycle. Either a couple of minutes on then a couple off or run at reduced power.

We can probably coordinate the QSOs with either email or MSN messenger. (Messenger is real time which is nice since we can coordinate better... no reason to transmit if no one is look our direction.

Thoughts?

50.300USB is generally used for FM simplex contacts when the band is open. Of course, that is by gentleman's agreement, sooo.....

50.290 has been generally accepted as the recognized PSK31 frequency for 6 meters.

Ok... there you go. (I thought it was 50.295... but I don't have a band plan in my hand either.)

50.290 it is.

John,

50.290 is fine for me. As Jamie said, the chances are slim without a band opening, but who knows what constitutes an "opening" if the mode is PSK? How many openings have come and gone because nobody was operating at the time, or, because they were not in a noise-tolerant mode? I agree on the weekend, daylight timeslots. I'll set up on 50.290 as soon as I get up Saturday, and call CQ every time I pass the computer. I'm on a homebrew J-pole for the time being, so that will have to do. "Nothing ventured..."

73,
Tom, KA5NEE

I would agree on the slim part.... With a j-pole it possible but not too likely. Being Omni-directional is going to hurt you.

I could not find it again on the web site, I have the PDF. The files section will not allow members to upload, I have it on another group section that I have started for our local club.

http://groups.yahoo.com/group/TSARG/files/Antenna/six_meter_antenna.pdf

Is it possible for the moderator to upload it to the file section?

Thanks
Dave

538. Re: Log Perodic Antenna for 50 - 500 mhz

Yahoo group: 6meter (2000 — 2003)
Date: 2002-02-21 19:03:03 UTC
From: w4fal
Topic: 442 Message: 538

Log-Periodic Antennas have the advantage of having wide bandwidths (in fact given enough boom length, in theory there's no limit to the design bandwidth that one can achieve... (In practice some physical and mechanical limitations come into play). There are several different vendors of VHF/UHF log-periodics on the market with some covering from 50 to 1300 MHz...

Like most things in life, however, you don't get something for nothing. The big thing that you sacrifice with Log-P's is that for a given boom length and a given freq, compaired to any other parasitic array design (yagi, quad, delta, quagi), the gain will be much lower.

So if you don't need the bandwidth, you're much better off (on six for example) to put up something like an M2 6M7 (10.5 dBi) 26.9" boom length or a 6M5 (9.5 dBi) 18' boom.

Quads also good performers in terms of their gain vs boom length IF you don't mind the excessive vertical space they occupy on your mast. Most of the towers that I've helped folks with have had 20 to 22 foot masts with about 16 to 18 ft of it above the top of the tower. These masts are either thickwall chrome moly steel (HEAVY, a 24 ft mast weights almost 180 pounds) or schedule 80 aluminum (more expensive but lighter). With something like this you'll have room to mount a 6M quad, and a 2M quad or yagi, and a 70 cm yagi, and a tri-band HF beam..... Get a BIG well built rotor.....

Don't skimp on the guywire anchors either....

73,

Frank, W4FAL

Topic: 539 Message: 539

Actually I decided to skip on buying another commercially built antenna in favor of a homebrew design. When I got my Icom 706 all I had was a 2m/440 vertical, I wanted to operate on 6 meters, so I built a copper pipe j-pole. I was lucky - 2 days later the band opened up on me and I made some good contacts on 52.525. I was very pleased with the results.

I found some plans for a copper pipe 3 element yagi. I have decided to go for the wide band design, which will cover all of 6 meters with only slightly less gain than the high-gain design. Total cost of materials will run me an estimated $30 - $40, and it is possible that I can get away with under $30 of materials. Boom length will only be 6 feet so I can use my light duty TV rotor.
Another option I have is to not use a rotor. I live in South Florida so if I just point a beam to the north I will do fine with a band opening. I could use my rotor with my 2 meter 10 element beam antenna (I like to operate on 2 meter SSB). Most likely I will end up buying another TV antenna rotor and then mount the antennas on different masts. I have a 30 foot crank up tower that I am considering putting the 6 meter antenna on, my 2 meter beam is currently on a pipe mast about 20 feet off the ground. As of right now there is nothing on the tower because I need to get some stainless steel cable for the crank device.

For 440 I can just use my dual band vertical. I have a 10 element beam for 440 but seeing as how I do not use this band much and when I do use it I just operate local repeaters all I need is a simple vertical on a 10 foot mast. I have a 220 radio as well, but the antenna I have for that thing is nothing more than a 1/4 wave mag mount. The 220 mag mount antenna works very well because the noise of that band is very low.

The plans are on the net. You will need adobe acrobat to view the pdf file. here is the link
http://groups.yahoo.com/group/TSARG/files/Antenna/six_meter_antenna.pdf

There are 2 designs on that link. One is a narrow bandwidth "high gain" design, one is a wide bandwidth design that has slightly lower gain but it covers all of 6 meters with acceptable SWR (no tuner needed). Depending on how you plan to use 6 meters, you might want the high gain design or you might choose the wide band design. Im going for the wide band design so I can use it for SSB and I can also go up to 52.525 for some FM operation.

Topic: 539 Message: 545

No, there were no plans. I substituted 1/2" thin wall copper pipe for the the single size 1/2" aluminum. I used a square aluminum tube for the boom, it made attaching u-bolts easy. The 8' foot lengths of copper were only $4.50 vs $12.00+ for aluminum. I made the Hi-gain beam. It is 1:1 at 50.7 dropping to about 1:1.7 at 50.125.
There is no 6 FM activity around so I did not need the wide coverage.

Welcome to six, Buzz. Have no fear, you will work people unless your location is at the bottom of a deep hole. I will be looking for you during the contests from the top of Mt Greylock in Mass. from W2SZ. I am one of the six meter operators. Who knows, I may work you from home in northern CT. Anyway good luck with your antenna project and see you in the spring. Fornow just leave the rx on 50.125 and keep listening. 73, Don K1DH

Yes Buzz, I agree. You'll 'work' all kinds of repeaters, SSB, CW, etc. But remember....there is still good, old-fashioned 6-Meter AM out there on 50.4 MHz!

At 6am every Saturday and Sunday you will find a group of us in the eastern MA/southern NH area. We had a fellow from the Mt. Snow (VT) area join us two weeks ago. Come & join us!

For what it is worth - I am here in EL 95, and I often sit on 52.525 FM listening for activity. Sometimes I even throw my call out there to see what happens. Most of the time, all I get back is static - apparently there are not many 6 meter people here. The VHFers in my area gravitate towards the 2 meter repeaters.

NEXT WEEKEND, March 9, some hams active in public service are going to do a mini-field day. Being in South FL, there is no snow and this time of year the weather is very nice. The bug population is at its low point. So we have to take advantage of the good stuff while it lasts. The summer field day might be great for all you people up north - but for people in South Florida it is hot, VERY humid, the bugs are totally out of control, and it is guaranteed to rain at least once.

Anyway, Im taking my field military beam antenna to the gathering (log periodic 33 - 76 MHZ, 30 foot mast, antenna looks like a giant fly swatter which is appropriate for Florida...scares some flying insects away). Ill give a shout out on 6 meters using SSB, AM, and even FM. Time - around 11:30 AM - 12:30 PM EST. Hope the band is open and I can hear some of you!!!

-- James KF4OUI - one of the few, the proud, the EL95 six meter operators.

As for AM, in addition to 50.4, 50.250 is used locally (NE) for AM. 50.260 is usually monitored for SSB operation.

James,
Here in EM95 we have the same trouble on 52.525FM very little to no activity. But get on USB and go to 50.125 with a horizonal beam and that is where everyone is. I've done the listening during a big band opening. I listened on 52.525FM and 52.540FM with nothing heard. I dropped down to sideband and from 50.110 to 50.240 I was hearing stations from all over Europe and Northern US. I do know FM doesn't carry as far so more people that are into DX work SSB. Also for local conversation I can work about 70 miles with 100watts and my omni on FM. On SSB with my 3 element beam I can work sometimes over 150miles with clean signals. So I guess what I'm trying to say is don't expect to much from FM. Side band is where its at.

73 and Good DXing,

Jamie R. Dean

560. Re: [6 Meter Sked] looking to try it

Yahoo group: 6meter (2000 — 2003)
Date: 2002-02-26 04:44:45 UTC
From: WL7M
Topic: 552 Message: 560

I have to agree for the most part that when the band is open, SSB is the mode to use. Obviously, CW tops the list of distance for power, followed by SSB. However, when the band is *OPEN*, then FM will go the distance as well, along with AM. I've worked lots of "lower 48" stations from here in Alaska on FM and AM. I've worked QRPp stations running only 1 watt to an indoor dipole antenna! I've been fortunate to have worked all 50 states on 6 meters on SSB. Don't be discouraged...we may be in the doldrums right now, but 6 meters will come back in a few months...and next fall it will be back too. Listening for beacons is a sure fire way to detect band openings, as well as simply calling CQ for a few minutes every hour - you never know who will answer you. I did that once and VP6DB answered my call from Pitcairn Island! Hang in there, don't get discouraged. That's why they call it the magic band!

I was fortunate to work England, Wales, Scotland, Ireland, Denmark and ICELAND....all in one day. But that was on Side-Band. I'd love to do THAT on AM, just like they used to do before the late 60s when SSB came into play.

Unfortunately, the only part of the magic show has been the disappearing act! :-(

All I've heard on 6m lately here in the Washington DC area has been the cable TV spur at 50.111 MHz.

From: Jamie R. Dean
Topic: 567 Message: 567

I've been watching the DX map at http://6m.dxers.info It would appear that Europe is have some really good band openings even late into the evening when it would be dark there. This in a way makes me feel left out. The U.S. is not getting in on any of the action, maybe becuase the action is not in the western hemisphere. I'm here in North Carolina (EM95dr) I am really wanting to get my worked all states (WAS) on 6 meter this year and have the need for a bunch of Midwest states + Hawaii. I have 30 states so far. I guess I'm being impatient. I guess most of us know the band will pick back up towards the end of spring and into summer. If you are a die hard 6 meter operator you take it when it happens and if not then you go to 2 meters.

73 and Good DXing (we hope),

Generally a horizontally mounted yagi is used for SSB, CW and AM work. FM is (usually) associated with vertical antennae....a whip or a vertically-mounted (or polarized) yagi. With the exception of the whip a rotor is also part of both antenna systems unless the antenna is purposely aimed at one direction.

Incidentally (I know this is a 6-meter site), in the 2-meter band, 144.450 is dedicated to FM-DX using horizontal-polarized antennas.

Depends on which mode you prefer. CW, SSB, or FM? Maybe some PSK31?

When the band starts to open, it will open first for CW, then SSB, then
FM. FM is usually the only mode where verticals are used, but that's
not a set-in-stone rule. Horizonal antennas such as dipoles and beams
are much more common on CW and SSB and are probably the antenna you
will hear most people using.

If local communications are what you want (repeaters, etc.), then you
want to be vertical; otherwise, I'd go horizontal.

Vertical vs horizontal does not make that big a
difference on 6 meters. Yes for ground wave you will
lose some db but for DX not that much of a problem.Two
meters and on up is a different story. I have worked
41 states and 196 grids on a KLM JV6 vertical from
EM04 in OKlahoma. Put up the best you can as anything
is better than nothing.

I would say horizontal because six is not going to be open much longer on F2. Sporadic E will only last a few months. Then you are stuck listening to a quiet band like the rest of us. Even if you can put up a halo antenna, you will be better off when the band is quiet and you are working the locals. 73, Don K1DH
A dipole works good also and you can hide that.

579. Re: [6 Meter Sked] Vertical or the Horizontal

Yahoo group: 6meter (2000 — 2003)
Date: 2002-02-28 00:15:50 UTC
From: WB4IGU@aol.com
Topic: 572 Message: 579

Hi Just my input on Antennas. At present I have a diplomat 6 up 38 feet vertical 5/8 antenna. It is an excellent performer and has been in service since 1969. I used RTV at all the joints so it is well protected and the RG213 is the same cable since 1969. I do plan to change it all sometime soon though. I have 36 watts forward and less then one reflected.
For people in restricted areas when I was stationed in Louisiana I was on the third floor of a cinderblock building and used the active element of a cubical quad as my antenna horizontal polarized and worked a station 60 miles away 24/7. In an apartment this seems like a good antenna, I constructed it out of #14 lamp cord. The opposite wall was to far away to act as my reflector so I just used only the one Quad. also for my brother in law when He lived in an apartment we constructed an antenna in the attic space and fed it through the closet ceiling and when he moved we plastered it with dry wall cement and repainted the whole closet ceiling. we gained access to the attic crawl space from a trap door in the hall ceiling to put the antenna in there. Also my nephew is using a vertical antenna in His condo disguised as a drain spout. His 2 meter ant is inside his flag pole. A 6meter collinear could also be inside a PVC flag pole. Also the quad could be a vertical by feeding it on the side center rather then the bottom center as I did mine. Joe Leonard wb4igu

This is not from cable TV. It is actually radiation from TV sets themselves.

It is only a big deal for local work, if you wish to do that. Vertical is the convention on FM, horizontal for the other modes. For your skip work, it really doesn't matter, as the ionosphere distorts the polarization.

For local work, you will lose about 20 dB if you are working a station using a different polarization than you are.

Oh? Polarization, just like size, DOES matter, especially when you get
above 30mHz. ARRL Antenna Manual and others refer.

From: Tom Cox
Topic: 582 Message: 583

Check the Antenna Book section on "Faraday Rotation," and its effect on skywave propagation. We have this discussion about once a month. For groundwave, expect about 20 dB of additional path loss to a remote antenna at right angles to yours. Skywave polarization is unpredictable, and may change moment-to-moment. Where QRM tends to be vertically polarized, going horizontal tends to improve signal to noise ratio -- unless you are using a groundwave path, and the other antenna is vertical, in which case, see above.

73,
Tom, KA5NEE

I agree...However where both stations are operating in the same plane,
the fade loss is significantly...repeat significantly... reduced. And that's
not a "maybe".

If you're trying to pull the first DXpedition to Lower Slobovia in 30
years out of the noise level on SSB, would you rather have that edge, or just
"hope" that the band won't change before you get your call in the log?

Even a modest (ie: Cushcraft A503 at less than $100) 3 element beam can
make the difference.

I used a rotatable dipole on 6 for several months and worked it against
my 1/4 wave vertical. Working west from EM75 to Colorado, California and
Mexico, it was often the difference between a QSO and a heartbreak.

As they say..."Your mileage may vary".

Ground wave, enhanced Ground Wave and other 'extended' terrestial
polarization tends to move toward the horizontal as it travels over un-even
terrain. I could care less what the books say on this subject. I know this
for a fact. I have seen it over and over again in 40 years on six meters
and above.

587. [6 Meter Sked] Re: Vertical or the Horizontal

Yahoo group: 6meter (2000 — 2003)
Date: 2002-03-03 16:56:05 UTC
From: ku4a
Topic: 582 Message: 587

> Oh?

Yup.

> ARRL Antenna Manual and others refer.

My ARRL Handbook and ARRL Antenna Book don't indicate that there is any difference "above 30 MHz.". Representative quotes:

The ARRL Antenna Book:

"Long-distance communication by way of the ionosphere produces random polarization effects routinely, so polarization matching is of little or no importance".

The ARRL Handbook:

"It is not essential for both stations to use the same antenna polarity for ionospheric propagation (sky wave). This is because the radiated wave is bent and it tumbles considerably during its travel through the ionosphere".

588. I will be on the Queen Mary again today 01:00 UTC

Yahoo group: 6meter (2000 — 2003)
Date: 2002-03-03 00:59:43 UTC
From: jerichatham1@earthlink.net
Topic: 588 Message: 588

The only chance I have to work 6 meters is when I am doing my shift on
the Queen Mary in Long Beach, CA.

This is a club station, W6RO (DM03vu). I am fairly new to ham radio, so don't
expect
years of experience jumping out at you. I do go in with a couple of guys
with the experience to get me by some misunderstandings of procedure.

I will be checking beacons and calling CQ on 50.125. Last month they
were working on the rotator. Hopefully they are done by today.....

From: ku4a
Topic: 582 Message: 589

> ...it was often the difference between a QSO and a heartbreak

Quite easy to understand. The propagation path at the time was such that starting horizontal was the way to go. It could well have changed a few seconds later.

In fact, your set up with the ability to change from horizontal to vertical is great idea. That way you can adapt to the polarization that is coming in at the time.

Years ago when I was operating the early OSCARs, I used circular polarization on the 2m uplink. Of course, there is "right hand" circular polarization, and "left hand" circular polarization. I switched between the two via a relay that was mounted on my KLM 2m beam. As soon as signals began to fade, I threw the switch to change to the other polarization. I typically switched every 5 to 10 seconds.

590. Re: [6 Meter Sked] Digest Number 79

Yahoo group: 6meter (2000 — 2003)
Date: 2002-03-03 17:07:29 UTC
From: ku4a
Topic: 585 Message: 590

Actually, Dan, The ARRL Antenna Book seems to confirm this for ground wave: "There is some evidence that vertical polarization shifts to horizontal in hilly terrain, more readily than horizontal shifts to vertical".

The fact that so much man-made noise is vertical also gives horizontal an advantage over vertical - less noise pickup.

Just to see if I can spur a small amount of activity I'll ask a question.
I'm about to take the Technician test and assuming I pass I'm going to need
to think about a transceiver. Is there anyone on the group with actual usage
experience with the Ranger RCI-5054DX ? If it's not an undesirable unit it
looks to me like a good place to start until I can get past my tin ear and
learn the code.

I was hoping to erect a 3-4 element beam for 6 this spring but looking around
I've decided I don't have the room for it..
I'd like to hear from anyone who's had experience with halos--Maybe u can
recommend a manufacturer?? Will be running appx 100 watts into it--from a 706

Thanks in advance and 73'

Ok. I will agree with what the ARRL says. But in experience I have found for SSB DX that a horizonal antenna is much less noisey and since even a 3 element beam has more gain then some of the best verticals on the market I have seen better signals and in some cases heard stations off of the horizonal beam I could not on a top of the line vertical (Diamond DPGH-62). Last point remember with a beam horizonal or not all your signal goes and comes from one direction so you will do much better in that direction.

As far as unlimited budgets is concerned, let me admit to being a retired
ex-shop teacher.
If you look up cheap in the dictionary it'll have my picture by it. Thanks
for the reply, I'm just trying to avoid buying something with which I'll
have problems.

Hi Harold,

I have been pleased with my RCI-5054DX. I use it in my car for SSB only, however, I have had many a successful QSO on FM as well. My Primary radio for 6 meter FM'ing is my Kenwood TM-742A. In the Shack, I use an Icom IC-746.

What I like the most about the RCI-5054DX is that Ranger has presented hams an affordable entry to 6 meter operations. Will my RCI-5054DX perform like my IC-746....probably not. But I can't help to think of how many hams have passed on 6 meters only because they couldn't afford a rig with 6 meter all mode capabilities. I have worked several stations throughout the western US from my mobile with its 25 watts on SSB. I believe it is an excellent choice for the ham that wants to work 6, but not break the bank.

BTW, our club (The San Diego Six Shooters ARC) has been field testing a prototype 6 meter rig for Ranger communications over the past 4 weeks. It is a 100 watt version of the RCI-5054DX (RCI-5054DX-100), and we hope to have a write-up with pictures (permission to publish the pictures pending) on this rig. I think many will be surprised with the performance of this little gem...but more on that when the time comes.

I wish you the best on your exam, and hope to hear you on SIX!

an affordable entry to 6 meter operations. Will my RCI-5054DX perform like
my IC-746....probably not. But I can't help to think of how many hams have
passed on 6 meters only because they couldn't afford a rig with 6 meter all
mode capabilities. I have worked several stations throughout the western US
from my mobile with its 25 watts on SSB. I believe it is an excellent choice
for the ham that wants to work 6, but not break the bank.

BTW, our club (The San Diego Six Shooters ARC) has been field testing a prototype 6 meter rig for Ranger communications over the past 4 weeks. It is
a 100 watt version of the RCI-5054DX (RCI-5054DX-100), and we hope to have a

write-up with pictures (permission to publish the pictures pending) on
this
rig. I think many will be surprised with the performance of this little
gem...but more on that when the time comes.

I wish you the best on your exam, and hope to hear you on SIX!

Hi Harold,

I have been pleased with my RCI-5054DX. I use it in my car for SSB only,
however, I have had many a successful QSO on FM as well. My Primary radio
for 6 meter FM'ing is my Kenwood TM-742A. In the Shack, I use an Icom IC-
746.

What I like the most about the RCI-5054DX is that Ranger has presented
hams
an affordable entry to 6 meter operations. Will my RCI-5054DX perform
like
my IC-746....probably not. But I can't help to think of how many hams
have
passed on 6 meters only because they couldn't afford a rig with 6 meter
all
mode capabilities. I have worked several stations throughout the western
US
from my mobile with its 25 watts on SSB. I believe it is an excellent
choice

for the ham that wants to work 6, but not break the bank.

BTW, our club (The San Diego Six Shooters ARC) has been field testing a prototype 6 meter rig for Ranger communications over the past 4 weeks. It is
a 100 watt version of the RCI-5054DX (RCI-5054DX-100), and we hope to have a
write-up with pictures (permission to publish the pictures pending) on this

Hi Harold.

I have a RCI-5054DX for 7 months and i'm really satisfied. I fill 5 log pages with european sattion and via aurora. For the price we can find better on the market at this moent.

Can you tell us more about the new 100 watts 6 meter transceiver you test.
Is the same apearence, functions, display etc.

Thanks and 73.

Marc VA2MGL

Thanks for the good wishes, if I pass the test and whine to the wife enough,
she'll probably let me get the Ranger radio. I certainly like the
idea of the 100 watt version your club is testing, though. In any event , as
soon as I can be legal, I'll be trying to talk some distance to someone
asap.

610. dipoles

Yahoo group: 6meter (2000 — 2003)
Date: 2002-03-06 15:37:29 UTC
From: larry fields
Topic: 610 Message: 610

I have never used the halo yet, as well, but did
use a dipole antenna in Philippines, and very good
results with it..working about 95 japanese and 6
Hongkong stations with it..the antenna is sold only in
Japan and is called W215S its about 13 feet long, and
is a dual bander, working on 15 meters and 6 meters,it
has coils on it for the 15 meter side..

613. RE: [6 Meter Sked] CW call freq

Yahoo group: 6meter (2000 — 2003)
Date: 2002-03-07 06:07:35 UTC
From: Joe Acevedo
Topic: 607 Message: 613

Hi Don,
I'm sure glad we have you guys on the right coast to point us here on the left coast in the right direction. Actually, that was left of the list because it was assumed that EVERYONE recognized 52.525 as the FM call freq. If you read the opening page on our web site, you will see that we frequent that frequency as it is our belief that anyone new to the band may check that frequency out first. Thanks for the reminder, and keep the activity going even when the band appears to be dead. Local communications are still outstanding on six, and usage helps protect our spectrum from being sold off by the FCC.

Hope to hear you on SIX!

I'd love to do PSK31 on 6 meters sometime but seeing your a 2 call it may be pretty hard from EM95 to you unless that band opens in the right direction. But if it ever does I'd love to hook up. I'm also looking for people around EM95 (Western NC, UpState SC and GA and Eastern TN) to do digi-modes with PSK31, SSTV, MFSK, etc..

From: Joe Acevedo
Topic: 616 Message: 616

Greetings all,

Just set up my sound card interface for my IC-746 and will be calling CQ on PSK31 on 50.290 between 1600 and 1700UTC. I will be beaming to the Northeast from DM12. Maybe I'll hear you, maybe not, but we'll give it a try anyway!

Hope to hear you on SIX!

Among other things, there's a very good, simple to make 6M vertical dipole that some have used successfully on 2M and 440Mhz with flat SWR.

Speaking of good easy to build 6meter vertical antennas.....I need plans for a 6 meter vertical that can handle 500 watts. The design needs to be very strong because this antenna will end up at a repeater site. The reason for needing to handle so much power is that the repeater transmitter tube is able to put out a maximum of 350 watts. I will talk with the person who will act as repeater trustee to see if the power can be turned down, but since I do not know the specs of the equipment I do not know what the minimum wattage output is - I would like to get it down to 100 or so watts.

Anyway...if anyone has some plans for a high power antenna I could possibly use them. Everything that can be built will save the club some money as opposed to going commercial.

Lets hear about your Solar Power for the DX70-T, etc. I just bought one of these off Ebay from Radio Shack on clearance for $390. This one is the 10 watts on 6 meters, but what the heck at that price I'll take it. The auction I got this one on was for 30 units, next few days they put another 30 on there. Good place to get a heck of a buy, I really like this one.

Greetings,

Just wanted to pass along a few reminders to the group:

Today is Six Shooter Sideband Sunday, so hopefully, those of your with SSB capabilities will be monitoring and operating on 50.150USB as you would on 52.525MHz FM. We really are trying to promote operation on the SSB portion so many of you can gain experience working your rigs there before we start to experience the openings that make 6 meters the "magic band". (Every Sunday is Six Shooter Sideband Sunday)

This Tuesday (3/19/02) is the San Diego Six Shooters Amateur Radio Club's general membership meeting at the Top Sirloin Restaurant in El Cajon. The restaurant is located on the SE corner of Avocado and E. Main. The meeting starts at 1900hrs, but many of us get there earlier to enjoy some grub and great conversation. I look forward to seeing you there Tuesday.

Wednesday (3/20/02) is the deadline for submissions for the April SIX SHOOTER Newsletter. Randel, KG6IIP, has taken on this task and asks for contributions of any sort. Please help us develop this newsletter.

April 1, 2002 is "Opening Day" for the Goodwin Memorial 6 Meter DX Trophy contest. As you know, this contest runs from 4/1/02 through 12/1/02. A beautiful trophy will be presented to the winner and the winner's name will be inscribed on a plaque to be maintained by the club (the trophy is for the winner to keep). Membership in the San Diego Six Shooters Amateur Radio Club IS required, so please send in those membership applications with the dues so you can participate in our annual contest. Applications can be found in .pdf format at our web site www.netlynx.com/sdsixshooters . DX contacts verified for the period mentioned are only qualified if you are a member when the contacts were made, so join now!

That's about it from here... Hope to hear you on SIX!

2002 North American Meteor Scatter Rally

Purpose: To promote the use of VHF/UHF meteor scatter communication techniques.

Objective: Work as many stations as possible, in as many Maidenhead grid locators as possible, via meteor scatter on the amateur radio bands above 50 MHz.

Rally Period: 0000 UTC on April 27, 2002 through 2359 UTC on May 5, 2002. This is two full weeks plus a third weekend. The event starts on Friday evening, North American time, and ends on Sunday evening two weeks later. The dates are chosen to make good use of the Eta Aquarids meteor shower.

Rally Rules Are Posted on the following sites: (in case you lose this email)

2002 North American Meteor Scatter Rally

Purpose: To promote the use of VHF/UHF meteor scatter communication techniques.

Objective: Work as many stations as possible, in as many Maidenhead grid locators as possible, via meteor scatter on the amateur radio bands above 50 MHz.

Rally Period: 0000 UTC on April 27, 2002 through 2359 UTC on May 5, 2002. This is two full weeks plus a third weekend. The event starts on Friday evening, North American time, and ends on Sunday evening two weeks later. The dates are chosen to make good use of the Eta Aquarids meteor shower.

Operation: We're calling this a Rally, rather than a Contest, because the purpose is generating activity rather than "winning". Scoring rules are provided, however, to make it interesting -- and scores
will be posted following the event. Both random and scheduled QSOs are encouraged; more points are awarded for random QSOs. A "random" QSO is one for which no schedule or pre-arrangement has been made by the participating stations. It is permissible to "spot" yourself calling CQ: for example, on the Ping Jockey web page, by posting something like "W2ABC calling CQ to SW on 144.130 using FSK441". If a QSO results from someone answering such a CQ with no other announcement or non-meteor communication from the calling station, the contact will be deemed a random QSO.

Any communication mode may be used, so long as QSOs are made by the reflection of signals from meteor trails. The honor system applies! Because the Eta Aquarids shower generally produces short-duration ionized trails, high-speed modes such as FSK441 or HSCW will probably be the most effective.

A station may be worked for credit only once per band during the Rally, unless one of the stations has changed
grid squares. For
"Roving" stations, a separate log should be submitted for each grid activated. Each such log will be scored separately.

QSO Requirements: To log a completed contact you must copy both calls, 4-digit grid locator, and rogers. Any form of liaison communication between the parties involved in a contact in progress is prohibited. Any interruption of a contact in progress requires both stations to restart the QSO attempt from the beginning. All information required for a complete contact must be exchanged using meteor scatter and no other propagation mode.

Entry Classes:

Single Band Low Power
Multiband Low Power
Single Band High Power
Multiband High Power

To qualify for the low power categories your power output must be 200 Watts or less for all QSOs.

QSO points:

Band Assisted Random
---
50 MHz 1 3
144 MHz 1 3
222 MHz 3
10
432 MHz 10 30

Multipliers: The number of unique four-digit grid squares worked per band, summed over all bands.

Scoring: Your final score is the sum of all QSO points times the sum of unique four-digit grid square multipliers on each band.

Reporting: The following information should be contained on the summary
sheet accompanying the log: Callsign used, Grid Square(s) activated, Maximum power used, Name, Address, and Email Address (if available). Log information must contain the following data: Date and time of QSO, callsign of station worked, frequency, grid square, assisted (A) or random (R), and claimed QSO points.

For example:
Date UTC Call Band Grid A/R Points

Apr 27 0103 K1ABC 144 FN42 R 3
Apr 30 1108 W9DEF 432 EN62 A 10
May 3 1237 N4XYZ 50 EM83 A 1
...

The summary sheet should include a table of the following form:

Band Assisted QSOs Random QSOs Points Grid
s
---
50 11 4 23 9
144 13 3 22 10
222 1 0 3 1
432 0 0 0 0

Totals: 25 7 48 20

Total Score = 48 points x 20 grids = 960

Logs must be postmarked or email dated no later than May 31st.
Email logs should be sent in ASCII format to: wa5ufh@....
Postal mail logs should be mailed to:

L. R. Tipton
778 CR123
Edna, Tx 77957

Sample log pages and summary sheets are available from

http://groups.yahoo.com/group/wsjtgroup/

or

http://www.qsl.net/wa5ufh/

Any reasonable facsimile of these log forms may be used.

Note: The radiant of the Eta Aquarids shower is projected to provide the best conditions during the contest from approximately one hour before sunrise local time for approximately eight hours daily. This is the suggested best operating time each day. Remember though, high-speed meteor scatter contacts can be completed at any time of the day.

The 2002 North American Meteor Scatter Rally is sponsored by WA5UFH, KM5ES, and K1JT -- your friendly WSJTGROUP moderators. We look forward to working you on meteor scatter.

I monitor 50.110 and 50.125 SSB, and tune around the band some. I found during all those hot opening where in a matter of hrs I could talk to japan and the east coast (I am CN76XN), east could talk to me and EU, etc... that .110 and .125 were often bare. Near as I can figure the people *I* could hear were staying clear because the people *they* could hear were using them.

My question for you all is do you listen open or closed squelch?

I listen open, as I found that about half the stations I worked had clean and clear signals, but had very little effect on the Smeter, and would *not* break squelch at their peak. Even though I can easily copy them.

Of course this gets to be a pain, as I can easily tell when the local construct sites generator is running, as well as several nearby computers (500 - 1000ft).

I mostly hang out on 52.525 FM. Why you ask??? simple! My j-pole gets great SWR on that frequency - and not so great SWR on the SSB portions. I plan to do something about that soon - I'm building a copper pipe 3 element beam that will be tuned for the bottom of the band. To detect band openings I will listen to 50.100 and if I heart anything, off to FM.

I listen with the squelch wide open. I do this so I can hear all signals. In fact, when working simplex I will ALWAYS open the squelch unless Im talking very short distance, like when Im in a ham convoy and we are talking car to car.

Breaker breaker, this here is the rubber duck and we got ourselves....OOPS wrong band :)

Thanks for all the responses.
Since I have 2 rigs, I will monitor 52.525 FM and 50.125 USB and tune around on SSB when I have time.
The FM rig will be squelched for sanity, the SSB rig unsquelched as it has NO sq on sidband.
I noticed on openings several months ago that there was NO activity on 52.525!! I made several calls there with no luck.
If the band opens, feel free to try my repeater on 51.76, (51.26 input), PL 114.8.

If you don't have the ability to scan, 50.125 is probably the best frequency to sit on. Tune the rig now and then to see if there is activity on other frequencies.

If you have a rig that scans, such as the Icom IC-706, I suggest programming it to scan from about 50.100 to 50.250

I am a little new to 6 meters and have often
listened to 50.110 but gave a short call on it when I
was du1/n6hpx in Manila..and told all I was listening
on 50.125..had many respnses,but mostly from Ja's and
VR's..I haven't hadf much luck with FM,as my friends
DU1MS, and DU1EV couldn't hear me..I was using a
dipole made for 15 and 6 meters<W215S>..

Lighten up. The quote from Ted was funny, and I think I'll live.

On topic: I have very limited experience with 6M openings. However, I've usually found 50.125 begins to open up before 525. If you are interested in a particular area or compass bearing, look up some beacon freqs in those areas or headings, and check them from time to time as well. Keep listening, and it doesn't hurt to call CQ once in a while, either.

I have been licensed for 43 years. 6-Meters was the band I began with and it was the band I most recently ended with (at 6:45am this morning) with the local net.
I do 'work' HF as well as 432 "weak signals".
Monitoring the SSB frequencies most often used in New England (50.125, -.135, and -.150 is, by far, the best way to check for openings.

The usual AM frequencies of 50.250 & 50.4 (especially 50.4) are quite active when there are US openings.

Good DXing and 73s,

jd, K1TLV

> My question for you all is do you listen open or closed squelch?

For me it depends on two things: (1) local noise, and (2) how likely I think it is that the band might be open.

Sometimes my noise is virtually nil. In that case, I squelch the rig, knowing that any significant signal will break the squelch. If the noise is high, I open the squelch and scan that way. That makes it easier to catch any kind of signal (even a weak one) that might be coming in.

I choose to run no squelch on SSB no matter the noise level. The white noise of 6 meters and some HF is very relaxing and I found if I lay across the bed (My shack is my bedroom too) and it is quite in the room and no activity on the band the white noise will put me to sleep. But even back in the 80's and early 90's before I became a ham and was a CBer I never ran squelch. I figure tha main reason on 6 meters I choose to keep the squelch open is for very weak signal stations. I don't want to miss even the weakest DX.

My 'shack' is located in a 2nd building on my property about 100ft from the house (186 years old, so no antenna on house!).
I have too much to do rather than sit in front of a radio & listen to 'open' squelch. I purchased a Radio Shack FRS Intercom and hung it on the wall near the radio(s).
This unit allows you to program any one of the 14 channels and also any one of the usual CTCSS tones.
I then programmed my HT, a Yaesu VX-5, to receive the FRS frequency (w/tone). The 'intercom' includes a very effective VOX. This is very helpful.

For our 6am Sat/Sun get-to-gethers I walk over to the building at 5:30am, "light off the boilers" (turn up the propane heater....if necessary), push the VOX button and walk back over to the house to make coffee, read the paper, etc. When the activity begins my FRS intercom/VX-5 ensemble alerts me and walk back over, coffee in hand, to join in. It works great!!

Of course, this is ONLY effective w/FM & AM. SSB is another matter altogether. But if the SSB is 'open' I can only hope the AM/FM will follow.

If your club sponsors a 6 meter repeater then we would like to here about it. Club sponsored repeaters make up a large portion of vhf/uhf ham traffic. I personally respect a club that not only puts on the air a 2 meter repeater but spends the money to sponsor a 6 meter one as well. So If your club has a six meter machine on the air full time please tell the group. We want the following information, Freq., Tone, Location (City, State, Country and Grid Square), and the name of the Club.

656. gamma match

Yahoo group: 6meter (2000 — 2003)
Date: 2002-03-27 07:46:50 UTC
From: James Carlin
Topic: 656 Message: 656

I am attempting to build a 6 meter copper pipe yagi, but I have some questions about how to do it right.

1. How should I attach the elements to the boom? I was going to use a four way copper coupler (looks like a +). but many sites I have seen lead me to believe this is not the best idea. So if I have to keep the elements (and boom) one piece, what are some ways to attach the elements to the boom? Is it necessary to insulate the elements from the boom, and how would one go about this?

2. This is the biggie. How do I match the feedline to the driven element? Im leaning towards a gamma match because it looks easy enough to build (I have a commercial 2 meter beam that uses a gamma match). The problem is, I am having a hard time finding a web site that explains how to build a gamma for 6 meters. I need to know the measurements and construction details. Also, if anyone knows of a way I can avoid using a matching system and just direct feed to the driven element, I would be interested in that information.

Whatever system I end up using, it needs to be able to handle up to 100 watts without a problem.

James,
You would need to isolate the driven elements from the boom. You could achieve this if you still use the copper 4 way by taking a piece of PVC pipe that will fit into the 4 way cut about a 2 1/2" piece 1" in goes into the 4 way. Sweat a joint fitting on you driven element and place the other end of the PVC pipe into it. leaving a 1/2" gap between the boom and the driven element. You may want to reduce the gap to 1/4". This should fix the problem of isolating the boom and the driven element. As for a gamma match, there are alot of good web sites and computer programs that will help you design one. Also you could consider direct feeding the driven element but this option leaves no room for error in the measurements of the beam. At least a gamma is some what adjustable. Maybe someone else on the group has built a 6 meter gamma and has some ideas for you.

James,

I built a 2 meter yagi with 1 inch copper tubing for 2 meters and direct fed the driven element like a dipole.

I also used 2 radioshack antenna "U" clamps per element to fasten the elements to the PVC Boom pipe (3 element to 6 clamps). The clamps are around $2 a pop and were the most expensive part of the antenna. (Also the heaviest).

Look at the Antenna Elmer site link on the AC6V web site for hints.

The direct feed method with isolated driven elements is the way to go. Get an SWR bridge or antenna analyzer and trim the elements to the proper length.

There is no reason to add matching circuits to simple antennas like mono band yagis and quads. It just increases the complexity of the antenna.

JH

Just don't forget to choke (isolate) the feedline at
the antenna -- either with ferrite beads or a few
turns of the coax.

Good Luck & Best 73's!!

I have a 6m repeater in Monterey CA, USA, grid CM96 ;
51.76 out
51.26 in, PL 114.8
It is linked to my UHF and 2 meter machines.
It is a "closed" system but I just list it that way to discourage local usage by those that just want to talk about there ills etc.
6METER DX IS MORE THAT WELCOME, IT IS ENCOURAGED!!!
We are not a "club" per se, but a group of technical types that like to discuss antennas, radios and the like.

Subject: [6 Meter Sked] Club sponsered 6 meter repeaters

If your club sponsors a 6 meter repeater then we would like to here about it. Club sponsored repeaters make up a large portion of vhf/uhf ham traffic. I personally respect a club that not only puts on the air a 2 meter repeater but spends the money to sponsor a 6 meter one as well. So If your club has a six meter machine on the air full time please tell the group. We want the following information, Freq., Tone, Location (City, State, Country and Grid Square), and the name of the Club.

73 and Good DXing,

From: James Carlin
Topic: 657 Message: 662

I like the most simple option, so the direct feed method is the most attractive to me. I have changed my mind about using copper for the boom, I can use PVC or something else that will not radiate and this will solve the isolation problem. I like copper because it is easy to get (home depot plumbing section) and easy to work with - but I will look around for a lighter metal.I suppose I could paint the copper to prevent it from oxidizing if I cannot find anything else to use.

OK now for the technical portion of this message. I know that for a direct feed antenna design I have to solder the center conductor of the feedline to one place, and the braid to another. How would I do this on the yagi? Im thinking I would need to cut the driven element in half, isolate the two parts, then solder the center conductor to one section and the braid to the other (just like a dipole). The director and reflector elements could be left as single piece sections.

The plans I am following are from the Feb. 2000 issue of QST - someone else posted a link to these plans on this list a while ago. The antenna will be a wide band yagi, covering 50 - 53 mhz with SWR of 1:1.5 or less. at 54 mhz the plans state SWR will be around 1:1.96. Supposedly, the antenna will have a feedpoint impedance that will allow for a direct connection - with a choke in place of course. I am not concerned with coming up with a way to flip the antenna to vertical for local FM work because I have a copper pipe j-pole for 6 that I am quite happy with - but on those days when the band opens I can use the beam for both USB and FM DX because as the signal reflects off the atmosphere polarization gets "twisted" anyway - so I can leave the beam horizontal.

I want to have the antenna finished by the second Monday of next month - this is the day my radio club meets. Yesterday I built a copper pipe j-pole for 220 mhz, I will probably end up giving a short speech to the club about my projects. If the beam is done, I can bring it with my 220 j-pole to the meeting and tell the club members about this mailing list and the link to the beam plans. Maybe I can get more people to join this list!

-- James KF4OUI
Miami FL, EL95

The direct feed method with isolated driven elements is the way to go. Get
an SWR bridge or antenna analyzer and trim the elements to the proper
length.

From: Jamie R. Dean
Topic: 664 Message: 664

From the CQ Newsroom:

FCC Proposes Higher Vanity Fee

The FCC today proposed increasing the fee for amateur vanity callsigns to $14.50 for a ten-year term from the current $12. The proposed increase is part of the FCC's annual review of all of its licensing fees. Last year, the Commission dropped the vanity fee from $14 to $12. No specific reason was given for the latest proposed increase. The FCC's announcement did not give an effective date for the change, which is subject to comments and final Commission approval before it takes effect. Last year's fee change took effect on September 10.

Nick, think I have the layout and diagram for the entire antenna. I'll try scanning it in, worst case I can copy it and mail it, but let me see if it scans OK first.

Oh man, and I thought I liked dogs! To funny!

On topic. You may want to email some ham clubs in Texas.
Look in
http://dir.yahoo.com/News_and_Media/Radio/Amateur_and_Ham_Radio/By_Region/U_S__States/Texas/Complete_List/
and see if anybody emails you back. Also if you take a 2
meter HT with you that would have a good chance of getting
info from the locals. Just an idea.
Alvin

Jamie,
This was a very useful heads-up. That "beeeep-beeeep-beeeep" I heard was a virtual dumptruck of spam backing up to my mailbox. All my preferences are reset to "buzz off."
TNX!

I too have "fixed" this. Another thing I did is change my address and phone
number to fictitious ones. I am afraid the cat is out of the bag on the
personal
information. No troubles yet but if they can't be trusted they get false
info just
like everyone else on the web.

You have a good web page. I am a disabled vet too. I finally got my 100% in
'94. I was an AT2 working anti-submarine warfare of different frigates and
destroyers. Had the bird drop in the water a couple of times thus the
dissability. I am still in ham radio and Navy MARS. I think we might have
some ET's in our group. Not sure though. Keep up the good work. Enjoyed the
site. Rob KD4YOL FM07

From: ve7baq
Topic: 695 Message: 695

In bulletin #13257 Nick W9UM asked about the shielding foil used by Yaesu in the FT-100 rigs. K5UNM suggested CHOMERICS CHO-FOIL. I typed the word CHO-FOIL into the search box on the web and came up with the web site of the distributor, www.chomerics.com
They have both copper and other conductive adhesive foils plus a lot of other "good stuff." They also have pdf files that you can download and examine at your leisure. And they offer a sample if you so desire. Hopes this helps somone.

As far as I know, MARS has no frequencies around 6 meters. Below is the cordless phone band and above is TV channel 2.

USAF MARS has no freqs. around the six meter band but Army MARS has one at about 40mhz. Not sure if there is any activity on it or not and I don't know of a mod to make the TS-60 go there. But you can try http://www.mods.dk they are the clearing house for radio mods on the net.

Hello all 6 meter buffs! The Swan Mark I amp I had for sale (converted to 6) has been sold. I still have the Swan Mark II, its looking for a good home and is waiting to do some magic for someone here perhaps. New tubes in it, soft keyed, custom front panel design for 6 meter identity. Power output 1200-1300 with 100 watts drive. Just plug it in and "command the band" Have a L@@K.....$875.00...Thanks 73 Louie

I just got a 6 Meter antenna up this weekend. The only thing I could talk to was a repeater in Rockville, MD which I was barely able to copy even though a friend who I was cross-banding on 2 Mtrs with said I came in to the repeater strongly. Oh well..

I'm in Grid FM18hx (Northern Virginia-Fairfax County).

Things are definitely quiet here in Virginia, at least when I can "Ham"

From: Jamie R. Dean
Topic: 709 Message: 709

Some of you might already know that I have been dealing with a bootlegger for some years now. And in my journey through identity theft, callsign and name I have learned alot about what and who will help you. I have designed a web site to tell the background on why I am having this trouble, the exact trouble I'm having, and what I have and am currently doing to fix the problem. The web site is in a very rough first draft stage but it does hold information that could be of service to another ham or individual that is dealing with name or callsign theft. The site is at http://www.geocities.com/any_justice Please feel free to e-mail me with comments. As new developments happen they will be posted to the site.

thanks for your time,

Jamie R. Dean

710. Antennas and grounding

Yahoo group: 6meter (2000 — 2003)
Date: 2002-04-05 14:16:59 UTC
From: Louis_45439
Topic: 710 Message: 710

After lurking for a while I have a question to ask...

I would like to build a 6 meter antenna I can use at home on my MFJ 6 meter, but I can't find anything out there (and I have tried many different places). I'm looking for a quad or a yagi, no more than 4 elements, and nothing real big (something along the lines of a temporary mount). The other challenge is I need it dumbed down. While I have had my license for a while, I have not attempted to build anything before and would like to have success and not frustration. You can e-mail directly to me or post to the file section of the group.

Also, I am curious about grounding antennas and want the groups opinion, as I have received yarious responses from people I have talked to. Can I ground to an existing ground rod in use by my DirecTV dish? Would multiple grounding rods provide improved signal gain/reception for the radio, or just extra protection? And finally, how do I ground the antenna without sending the signal straight to the ground rod?

Thanks for your patience with this newbie and all his questions.

Louis,

There will be two seminars on Friday, 5/17, at the Hamvention, on this topic. One is on grounding, and the other is on lightning protection. Unfortunately, they are -- so far -- scheduled for the same time slot (go figger). I'm going to the lightning protection one; if you go to the other, I'll trade notes with you.

It is generaly considered poor electrical practice to ground your radio system to another ground system (household electrical system etc) To avoid conflict and possibly hazardous problems I would seriously consider a separate ground rod or rods etc.

Here's some info on 6m antennas. Use a separate ground rod and what I like doing is drive the rod a foot down then pull it out and put a handful of rocksalt [warning it may kill grass] down the hole then drive the ground rod through the salt. 6m links fallowing

You sound like me! I have had my license for a few years now, and just recently really got into antenna building. My first project was a copper pipe j-pole for 6 meters - right now I am researching a 6 meter three element quad. My advice - just do it! You don't know if you can't build one till you try. To keep it simple, start off with 2 or 3 elements - if it works and you want to build something more elaborate, you could always do your part to promote 6 meters, and sell (or give) the antenna to a ham who might want to get in on the 6 meter action!!

And also - if design number one fails to work......you still learn something!! If you decide the loops are too large (or too small) you can easily change that. If the element spacing is too close or too far, it is easy to re-drill the PVC boom. If the boom is too short, more PVC is cheap! GO FOR IT!!!

Oh yea, and keep us updated as to your progress! We want to hear about your success.

You might consider the cushcraft 3 element yagi. It's
small and not expensive and has some ruggedness to it.
It should make a good starter antenna...73 Don K1DH

Well, I finally go my 2M/6M mag mount out where it would do some good
and all I have gotten is a whole lot of noise. Very disappointing.
I was on from 03:00 UTC to 03:15 UTC here in Phoenix, Az and got zip.

Yes, I know my antenna isn't the best, but it's all I have and probably all
I ever
will have for 6 meters until it can be proven to me that it's worth it for
me to justify
buying a better antenna.

Ah well. Guess I'll stick to 2M and 440 since that's where I get results.

Taliesin,
Hi. First off you have to work hard to get contacts on six meters. Over the years I've done 6 I can tell you a mag mount might get you a station or two if the conditions are outstanding but for the most part you are gonna be greatly disappointed. The most important lessons I have learned being a six meter operator is FM is 75% of the time useless for DX. Sure there will once in a great while be some there but it will be large waits in-between openings. Next if you want to work the far off stations you have to have a horizontal beam atleast 3elements mounted at high as possible. But at 30 feet or better. But it boils down to one thing with six meters, patence. You have to be willing to listen alot to reap the big rewards. Six meters may be dead for months at a time then one day you will be listening on USB and you will hear Asia, or France, South America or even Russia. But don't expect to turn on you six meter rig 10 mins a day and work the world. It is hard for us hams with one multi-band rig. I devide my time between my friends on 2 meters and my love for 6 meters. So I know I have missed many openings. But I have to have another 2 meter/440 rig in here soon so I can leave the IC-706mkIIg on 50.125USB or 50.110USB and catch the rare DX. But out of all I have said remember patence. They don't call 6 meters the magic band for nothing.

73 and Good DXing,

Too bad you have given up on 6 Meters after just 15 minutes of static... How many QSL cards have you received from your contacts on 2M/70cm? I agree with your conclusion if instant gratification is what you are looking for, however, I have found the patience and persistence of WORKING 6 meters to be worth it.

I'll second that and add that you certainly need a LOT of patience with
6 meters.
Back at the end of Dec 2001 and Jan 31, 2002, 6M opened up for a few
days and
working Costa Rica and Scotland was a real pleasure. Since then, mostly
noise. But,
like last spring and summer, I think the band will open up again.

721. Re: [6 Meter Sked] Nothing but noise.

Yahoo group: 6meter (2000 — 2003)
Date: 2002-04-08 10:21:31 UTC
From: George Matyaszek
Topic: 718 Message: 721

Joe,
since starting last year, I've worked 27 states and 4 countries mostly
on 6M and some
2M. I've found that working 2M SSB results in more contacts but shorter
distances.
Having a decent antenna like a Par (www.parelectronics.com) Electronics
6 & 2 meter
horizontal omni at 50ft above ground certainly helps.

I agree with that. Tho I still receive QSLs from DX contacts within the past 6 months I still remember those days when I sat in Lincoln, NE, in my '52 (6-volt) Dodge with my Heathkit 'Shawnee', QSOing w/people in CA & AZ, and 5 minutes later repeating the process w/ folks in NE, PA, NC, etc. All w/ a whip....my Saturn-6 was home in my dad's garage at the time.

Too bad you have given up on 6 Meters after just 15 minutes of static... How many QSL cards have you received from your contacts on 2M/70cm? I agree with your conclusion if instant gratification is what you are looking for, however, I have found the patience and persistence of WORKING 6 meters to be worth it.

724. Re: [6 Meter Sked] Nothing but noise.

Yahoo group: 6meter (2000 — 2003)
Date: 2002-04-08 16:57:29 UTC
From: A.R.S. Alvin Koffman KA9QLQ
Topic: 718 Message: 724

When 6 is open I've worked a guy setting on his porch using a 6m HT and a rubber duck to my GP-15 vertical. He was 1,500 mils away in Fl! When 6 is dead [most of the time] everybody runs to 2m because there are more repeaters.

Well, I finally go my 2M/6M mag mount out where it would do some good
and all I have gotten is a whole lot of noise. Very disappointing.
I was on from 03:00 UTC to 03:15 UTC here in Phoenix, Az and got zip.

Yes, I know my antenna isn't the best, but it's all I have and probably all
I ever
will have for 6 meters until it can be proven to me that it's worth it for
me to justify
buying a better antenna.

Ah well. Guess I'll stick to 2M and 440 since that's where I get results.

If you have need to unsubscribe from the list sending an e-mail to me or the list is not going to get it done. At the bottom of each msg sent out by the list there are a list of commands or how to modify your subscription, subscribe or unsubscribe. Please take a look at this commands. You may decide that a daily digest of msgs would be much better than each individual e-mail. I don't want to see anyone go so please look at your options.

729. 6M Antennas/Gamma Match design

Yahoo group: 6meter (2000 — 2003)
Date: 2002-04-09 15:01:24 UTC
From: MadDrewski@aol.com
Topic: 729 Message: 729

OK, guys, I dumped the scans into my FTP account. The URL is

ftp://members.aol.com/maddrewski/

This should bring up 4 photos stored as .JPG files. The gamma match is #4, #3 is the beam setup for vertical ops (FM), the #2 JPG is for horizontal ops (SSB/CW) and the first page is the parts list w/tube sizes, etc. Any questions, email me OFF LIST please, I'll try to answer the questions as quickly as possible.

For you guys making a plumber's friend (copper beam), note that this design uses non-insulated elements, a bit easier to build with copper.

I also have some J-Pole designs....but these are off the 'Net, just do a google search and you'll find lots of plans. Think mine came off the packet website.

Go to www.irlp.net
This will take you to the IRLP web site and you will find all the information on IRLP. You will also be able to download a list of all the Internet Linking Repeater Nodes nodes over all the world (more than 380 last time I looked)

Alvin, here is information for the internet ham gateway. There is even a room for 6 meter operators.
Michael
K5GMR

"M0ZPD Internet Gateway" software. You can download this program at http://www.qsl.net/m0zpd Look for the "Download" link. If you are not planning to link a repeater or simplex frequency to your computer then you will need the "PC User's" Version. The other program is called "ILink" and you can download this one at http://www.aacnet.net/radio.html Both programs are still being developed and will feature lots of nice capabilities when finished.

I forgot to mention that you have to have a dedicated repeater for this operation but you can connect to any of the links aoll over the world by a hand held. The repeater is connected to the intenet. For instance, when you enter node id code 8881 you will be connected to McMurdo Station in Antarctica.

Has anyone else had trouble unsubbing off this list ?
I have sent 3 commands but still get mail even after confirming the unsub
order.
Can anyone help ?

Send a BLANK email (no subject no text in the message body) to

unsubscribe-6meter@yahoogroups.com

Robert,
to unsubcribe from this list your need to send a blank e-mail (no subject and no body text) to 6meter-unsubscribe@yahoogroups.com this will remove you from the list.

73 and Good DXing,

Jamie R. Dean

Go to www.irlp.net
This will take you to the IRLP web site and you will find all the information on IRLP. You will also be able to download a list of all the Internet Linking Repeater Nodes nodes over all the world (more than 380 last time I looked)

Great and informative instructions...better than Yahoo gives.....
Here, presented to you, are the official steps to take to unsubscribe from this service:
You must first purchase a Craft-O- Matic Adjustable Subscription Cancellation Unit. The unit can be obtained from most hardware stores and dental clinics. Be sure to obtain the proper permits to operate the unit from the Nuclear Regulatory Commission and the Food and Drug Administration in Washington D.C. USA.
Be sure to carefully unpack the kit and place each component in its accompanying mesh safety bag. Mount the Pershing DF4 mesinator on top of the perforated Gerring Mach 77 refibulator and attach them using the eight-millimeter torque fork. Be sure that the refibulator is mounted at a 66 degree angle and properly dispersed so that it is flush with the curved section of the Pyrex thistle tube.
Place the four sections of the triangular separation gear into the posture cylinder and lock them into place using the band-aid adhesive strip. Insert the wiggling pin into the wobbling hole, making sure that it seated correctly.
Place the D cell battery and the eleven 9 volt batteries in the power chamber. The device should be calibrated before operation using the optional digital corkscrew accessory pack prior to operation. Insert the digital corkscrew through the electronic combustion service chamber using caution not to touch the reinforced tungsten igniter control module and quickly turn the inverter drive to 28.6 degrees. Turn the Craft-O-Matic Adjustable Subscription Cancellation Unit upside down and hit the bottom plate with a 48-ounce ball-peen hammer while shaking the unit vigorously. Force open the door to the incineration valve compartment and set the pressure gauge to 719 psi.
Close the door and seal it shut with duct tape. The unit should now be properly calibrated and ready to use. Before activating the Craft-O-Matic Adjustable Subscription Cancellation Unit, you must first elevate it to a height of 229 feet above sea level to insure that the unit receives the proper oxygen level and barometric pressure. Point the aerial to 17 degrees north by northeast to within the parameters of the Telstar GS-2 weather satellite and apply pressure to the wing shaft on the southern most section of the modular accelerator. Using the special ratchet adapter supplied with the unit, rotate the heater core to the "on" position.
The "on" position has been obtained when the green light begins to flash, signifying that the red light is about to go off. Once the red light is off, flip the toggle switch labeled "ON/OFF" to the "ON" position and count to 47 before logging on to the system.
Logon using your user name and password and wait for the prompt. Once prompted you must check the box with the appropriate action you wish to take and then press the pressure release button and turn off the compressor while turning the hand crank at 231 meters per minute. Next, press control, alt,

delete, caps lock, shift, number lock, escape and tab simultaneously.
Press enter. You will have one second to complete the procedure. If you fail
to respond in the time limit allowed, simply purchase a new Craft-O-Matic
Adjustable Subscription Cancellation Unit and start from the beginning.
Please remember that this is the only way we will accept for you to
unsubscribe from this service. We have made every attempt to simplify the
procedure for your convenience. Failure to comply with the unsubscribe
policy will result in immediate termination of your subscription so please
follow the above directions carefully.

741. RANGER RCI-5054DX-100

Yahoo group: 6meter (2000 — 2003)
Date: 2002-04-10 15:36:41 UTC
From: Joe Acevedo
Topic: 741 Message: 741

Greetings,

Earlier this year, The San Diego Six Shooters Amateur Radio Club was asked to field test a prototype radio for Ranger Communications. This radio is a 50 watt/100 watt version of the earlier introduced RCI-5054DX. After putting the radio through its paces and playing with it for a period of just over 8 weeks, we are proud to present a "first look" at the new RCI-5054DX-100. This radio is currently at the FCC to be type accepted. We hope you enjoy preview.

http://n6six.50megs.com/

Hope to hear you on SIX!

Topic: 742 Message: 742

Interesting....but I'd rather have the CTCSS board instead of the roger beep!!!! However, it sounds like it will be a good radio, esp. to cultivate interest on 6M. Considering what some of the YaesIcomWood 6M radios go for, the price (for the std. model) seems good. If they hold the price on the new 100W model, the rig should enjoy some success.

Of course, if Icom and Yaesu get into a price war w/the FT100D and the IC706MkIIG, then all bets are off. I'd rather drop $700 or so on an HF/VHF/UHF rig rather than $400 on a 6M only rig.

However, for those who do not plan to upgrade to HF privileges, the Ranger seems to be nice. I've played with the 25W model, and (other than the obvious CB heritage) it seems to be a neat little radio. And we NEED more folks on 6M....if Ranger had included a tone board, I think our 6M repeaters would be seeing much more activity...the one I played with was sold, as the owner really wanted FM capability but didn't want to use an external CTCSS board. He bought the Alinco FM rig, which is another possibility if you prefer 6M FM.

For the money I think that the Alinco DX70TH is an option. You get HF plus 6 meter all modes. This model gives you the CTCSS board (granted they are dip switch set) and 100 watts even on six (Alinco has a less expensive version that limits power to 10 watts on 6) I bought a returned one (same warrantee as brand new but someone had opened the box for me....it have not been used). I paid 450 for the radio and have good six meter coverage and the added ability to listen to HF.

hhmmm...
I bought my ORIGINAL 706 with a Heil HM-10 Dual
Element, RMK separation kit, and C-IV interface for
$500. I've recently heard of others buying original
706's in the low $400's. I'll stick to my trusty
706...

:-)

Me too. I have been stunned at the popularity of the 6m monobanders when you can pick up an HF/6m/2m rig for very little additional money.

I doubt if I will ever sell one of my 706s, but if I do, I think the way to advertise it will be to say "buy an Icom IC-706 six meter rig, get 160-10 and 2m FREE" :-).

Hello Everybody!
Six meters bands is allwing surprising us.
Just a minutes ago, about 21:00 utc, me and a local friend were talking on 50.100 FM. My local friend was listening to me with a 5/5. But, he heard some guy talking over me, in FM, with a big signal. Who?. The guy resulted to be TR8CA!, putting a strong signal. I was using my FT-817, with a dipole and 2.5 watts. TR8CA didn´t hear me on FM, but SSB and CW were very easy. My local friend was using a FT-847, 40 watts and a one element quad. TR8CA sigal in FM was also very good for me. After several days of silence, seems that conditions are comming back for us on 6 meters. It remebers me some months ago when I used to hear 9G5AN daily using the standard FT-817 rubber duckie!!!. Hoppe to hear some FT-817s on 6!!!. Best 73 from Argentina.

I see no reason this couldn't work on 6 Meters.

Talie

From QRZ.com

I have recently been volunteering for antenna work in our local area trying to learn more about our hobby.

I helped put up an antenna that I had never seen before. We put up an antenna that was made of 2 mobile antennas, 2-20 meter hamsticks, used as a dipole for 20 meters.

I am new at ham radio and joined the local club. A fellow ham showed me how you can take 2- 20 meter hamsticks and convert them to a horizontal 20 meter dipole.

I was quite impressed! We are going to put up a 40 meter dipole too. I got the job of climbing the tower, of course, I am the "young-new guy".

It was 36 degrees outside that day with a wind of about 20 miles per hour. (that is another story) I actually learned quite a bit! You can make low frequency dipoles from mobile antennas!

This has become the "ultimate" antenna in our area now. This antenna has all the same results of the "big" antennas but takes up a lot less space.

Can we get them in 160 meters? I hope we can wait for warmer weather to find out!!

767. opening possibility

Yahoo group: 6meter (2000 — 2003)
Date: 2002-04-16 06:52:57 UTC
From: James Carlin
Topic: 767 Message: 767

You all might want to kick on the 6 meter rig today (April 16) and listen for an opening. Right now it is 2:43 AM EST and I am hearing WWV on 20 mhz with a very strong signal. HF is active right now. Once the sun comes up, there could be some great openings on 6! I usually do not hear WWV on 20 mhz this late - the signal usually fades out around 9 - 10 PM here. For it to be coming in this strong at almost 3 AM is a good sign. I wish I had HF privileges, this would probably be a good time to work the other side of the planet on bands that are considered "daytime" frequencies.

MOLON LABE!!!

The pessimistic people who swear, "only the police and military should have guns," in addition to having a dismal view of their fellow man, must think that cops and soldiers are raised in test tube colonies using the combined DNA of Mother Teresa, Hercule Poirot and Dick Tracy. Having been both soldier and cop I can assure you this is not true. --CONSTABLE JOHN A GAYDER, NIAGARA FALLS, ONTARIO

I don't doubt that it would work, but would probably
have terrible efficiency on 160 meters.

The mounting to two antennas back to back to make a dipole is really popular on 11 meters. So much so that either AES or HRO sale a mounting bracket just for the purpose. The bracket has 2 3/8 thread mounts and a SO-239 to hook the coax to. So I'm guessing any 3/8 thread ant. will work for this purpose. I know back in the early 90's when I was still a CBer I did this with 2 102" steel whips and talked all over the world. I guess for 6 meters you could just cut the whips down.

73 and Good DXing,

Jamie R. Dean

I am excited to say that we now have 303 members to the group. I have been keeping close check on the numbers and today we gained a few new members and it brought us over the 300 mark. This impresses me due to the fact that the mailing list/DX group was founded Nov. 25, 2001 just a little over 4 months ago. I would like to thank everyone of you that passed the information about the group to a friend, your local club or local repeater. It people like you that will make this group successful for years to come. Now if we can just get some band openings to talk about (HiHi)

73 and thanks to everyone. YOU are appreciated,

Jamie R. Dean

Derek, I have the layout of the Cushcraft A50S on my FTP site. That should get you started. The packet boys also have a good website with lots of data.

My ftp site is ftp://members.aol.com/maddrewski/

The packet site is http://www.packetradio.com/ant.htm

The MFJ site may have some info on their 3 ele beam, too.

Good luck, send band openings instead of cash!

Hello de KD7IBK,
Here is a list of some antenna web sites, both commercial and homebrew, that may be of some help.

1) http://members.aol.com/n2kbk/6m.html
2) http://www.hamstick.com
3) http://www.vicon.net/~aketner/antlinks.htm
4) http://www.kb6kq.com
5) http://www.sedan.org/jpole.htm
6) http://www.softcom.net/users/kd6dks/quad.html
7) http://www.lightningboltantennas.com/vhf.html

Good luck and happy building/buying.
73 de Lee KD7IBK

Lee,

Nice selection of links. Thanks for doing the virtual legwork.

From: MadDrewski@aol.com
Topic: 785 Message: 787

Wow, added three new sites to my list of antenna sites......excellent job all around!! Hope this wealth of data helps the person who originally asked the question.

Now, the REAL question....how to get the homeowner's assoc. to allow me to put up a tower? Hmmm...actually, how to get the XYL to let me do so!!

BTW, if you're in NC, there is a hamfest in Morganton this weekend....between Hickory and Asheville. Talk-in is on the 147.150 (+) machine. Look for the 6M hamstick and the Swan 250/210 rig, come by and say hi!

Cheers;
Andrew

From: James Carlin
Topic: 785 Message: 788

The XYL is easy - simply buy her something as a distraction so she does not notice the tower right away.

The homeowners ASSociation is another matter. If you signed anything saying "I understand that towers are not allowed" you are out of luck (S.O.L. actually). Homewones association agreements constitute private agreements (contracts) so they carry weight. The only thing I can come up with is to claim discrimination against you - but this is a VERY WEAK argument. Courts will likely say "Sir, you chose to live here knowing about the no tower clause".

Sometimes, the power is too powerful to fight.

From: W6MDK@AOL.COM
Topic: 785 Message: 789

Although CC&Rs vary, of course, from state to state and association to association, there is a number of similarities. I was the VP of a large (863 owner) association for several years, and became intimately familiar with the rules. Ours did NOT include a "no tower" or "no antenna" clause, although they DID require that the homeowner obtain association approval prior to erecting anything.

It came to a showdown when I wanted to install a Primestar dish (OK, I know its not a tower). Initially, the association denied the rquest. THen I found a clause in California law which required that approval of a sattelite dish not be withheld by any California association. Of course, I had to assume responsibility for any damage, but the dish was installed.

Although I am not a lawyer (but my wife is one), it seems to me that, if you combine THAT statutory opening with PRB-1, you might just have the chink in the armor of against the discrimination argument. Why would it be OJ for a TV view to install an antenna, but not a licensed amateur? Tower? Possibly not the same argument. But antenna? It certainly seems to be related.

I am just starting out in 6m and would like to know
what the members of the group think about the choices
- Verticle or Horizontal Polarization for the antenna.
We have some 6m repeaters in the UK and so I will be
getting a mobile antenna, but I want to know which is
best for DX.

From: MadDrewski@aol.com
Topic: 791 Message: 791

Actually, the only thing the CC&R states is "no external TV antennas" which means I have a loophole....maybe. I'm currently exploring that possibility; the J-Pole has caused no comment except for the ham who used to live in the same neighborhood (introduced himself the week before he moved...oh, well!). The XYL is actually the major problem....to distract here would bankrupt me!! Oh, well....one of these days...!

Tony,
I use a Par Electronics (www.parelectronics.com) horizontal omni for 6m SSB.
When the band is open, you can work just about anyone you hear.
Locally, with
100 watts, I make contacts up to 200 miles.

message for Tony Bowers...Hi Name is VInce, call is KA8FFM, located near lake Superior in EN56qc (Michigan)...In answer to you antenna question...HORIZONTAL,HORIZONTAL,HORIZONTAL for ssb/cw, and hence DX.Not that FM is not good, but one must be in full blown opening for it. A 3, 5, or even 7 element if you can do it, at least one, but more is better, waves abouve the terrain and then of course an opening. Even a horiz. loop is acceptable, but of course a beam is better. Don't forget about the aurora scatter. Good DX and hope to work you during the next F layer activity...Vince

795. ranger 6 meter (mic question)

Yahoo group: 6meter (2000 — 2003)
Date: 2002-04-20 03:22:05 UTC
From: scanner_nuts
Topic: 795 Message: 795

I purchased a RCI-5054dx and love the rig!
I also have a TE systems 170 watt amp that works great with it.

My friends tell me it sounds great on SSB but on FM it lacks dynamic range in the audio. They say it has no highs in it.

My question is this, What would be a good microphone to compliment the audio on this radio? I prefer a desk mic but really it doesn't matter. I don't care to lose the frequency up/down buttons since I would never use them anyways. Looking for advise from somone who has a ranger and switched microphones.

All in all this is a great radio and for the price, it can't be beat!

Tony,
It all depends on the mode you will work. For SSB it a definite to go with horiznal but for FM work you should go with a vertical since all your repeater will be vertical.
I guess to start pick the ant. for the mode you will work the most then as you get more into six meters you can buy the other antenna.

From: Joe Acevedo
Topic: 795 Message: 797

Glad to see you are enjoying your RCI-5054DX. I use a Turner Plus Three desk mic with mine, and a member of our 6 meter club who also owns one of these radios uses an Astatic D104-M6B hand mic, and I have to tell you that he sounds great!!

Not too sure about any other mics, as these are the only two other than the stock mic that I have actual experience with this rig.

In case you are interested in Ranger's next 6 meter radio, check out the preview on the RCI-5054DE-100 on the San Diego Six Shooters ARC web site (http://n6six.50megs.com). I personally think the new radio, scheduled to be released this summer, will be very successful on the heels of the RCI-5054DX.

Hope to hear you on SIX!

Another suggestion would be to tell your XYL what a ham here told his XYL. He said "honey I'm giving up my hobbies that keep me home all the time in favor of going to the bars every night and drinking my paycheck like most of my coworkers do. Then when I stager through the door I'll probably beat the %*#$ out of you like my coworkers do their wife's." After considering the overlooked maters of life she became N9VPG.
As for the homeowners thing, sue, it's the American way!

From: A.R.S. Alvin Koffman KA9QLQ
Topic: 792 Message: 800

Personally I don't think it matter on DX. I was talking to a station 800 mils away one time that had a 6m vertical and horizontal beam [twist], he said he could hear me better on the horizontal even though I was on a vertical omni. On ground wave you want the same polarization or you'll loose 20db signal, also most commercial verticals are cut for the FM part of the band so SWR will not be great on side-band. Side-band is a LOT more efficient then FM and you can hear and understand weaker signals much better. So ideally run a pair of stacked 8 element quads horizontally polarized, if your tight on space a squalo does good but remember when the bands hot a rubber duck will work. Are you all mode?

802. Re: [6 Meter Sked] 6M antennas

Yahoo group: 6meter (2000 — 2003)
Date: 2002-04-20 17:41:14 UTC
From: Dan B (Scanner Nuts)
Topic: 785 Message: 802

I'm still amazed at the number of people who spend $100k to $300k for a house and land knowing that they cannot do what they want to do on the land.

Thank goodness here in east Tennessee you can still buy land for $3500 a acre and build one heck of a house for $90k. I'm so happy nobody can say anything about my tower

---

The XYL is easy - simply buy her something as a distraction so she does not notice the tower right away.

The homeowners ASSociation is another matter. If you signed anything saying "I understand that towers are not allowed" you are out of luck (S.O.L. actually). Homewones association agreements constitute private agreements (contracts) so they carry weight. The only thing I can come up with is to claim discrimination against you - but this is a VERY WEAK argument. Courts will likely say "Sir, you chose to live here knowing about the no tower clause".

Sometimes, the power is too powerful to fight.

-- James KF4OUI

Now, the REAL question....how to get the homeowner's assoc. to allow me to
put up a tower? Hmmm...actually, how to get the XYL to let me do so!!

803. RCI-5054dx Mic swap (Trying again)

Yahoo group: 6meter (2000 — 2003)
Date: 2002-04-20 17:44:36 UTC
From: Dan B (Scanner Nuts)
Topic: 803 Message: 803

I'm posting this again...for some reason it never went out.

I purchased a RCI-5054dx and love the rig!
I also have a TE systems 170 watt amp that works great with it.

My friends tell me it sounds great on SSB but on FM it lacks dynamic range in the audio. They say it has no highs in it.

My question is this, What would be a good microphone to compliment the audio on this radio? I prefer a desk mic but really it doesn't matter. I don't care to lose the frequency up/down buttons since I would never use them anyways. Looking for advise from someone who has a ranger and switched microphones.

All in all this is a great radio and for the price, it can't be beat!

Glad to see you are enjoying your RCI-5054DX. I use a Turner Plus Three desk mic with mine, and a member of our 6 meter club who also owns one of these radios uses an Astatic D104-M6B hand mic, and I have to tell you that he sounds great!!

Not too sure about any other mics, as these are the only two other than the stock mic that I have actual experience with this rig.

In case you are interested in Ranger's next 6 meter radio, check out the preview on the RCI-5054DE-100 on the San Diego Six Shooters ARC web site (http://n6six.50megs.com). I personally think the new radio, scheduled to be released this summer, will be very successful on the heels of the RCI-5054DX.

Hope to hear you on SIX!

I am just starting out in 6m and would like to know
what the members of the group think about the choices
- Vertical or Horizontal Polarization for the antenna.
We have some 6m repeaters in the UK and so I will be
getting a mobile antenna, but I want to know which is
best for DX.

Tony G7NIZ

Hi Tony, For the 6 meter mobile antenna I have a van and ford full size auto. For the van I took and old antenna specalists loaded coil type of antenna removed the plastic cover and removed the shorted feed and the loading coil. then I soldered a jumper from the high side (ungrounded side of the input) to the connector for the whip furled. I attached a full size whip about 46 inches and with the 2 inch spring plus the bottom where the coil was made it resonate on 52.525MHz I placed this antenna in the center of my van. It works excellent. worked lots of openings into Canada and south America. For my full size auto that antenna worked also but I used the center roof location for my 2 meter 19 inch whip. So I used the right rear cowl for it and it did work but I hooked up my scanner for police calls to it. So for 6 meters I got a Motorola antenna from Motorola and mounted it on the left rear quarter panel. It totals out ton 57 5/8 inches I think. I got it free when I worked for Motorola but at this time they are 113.00 for the 10 meter version including loading coil which u can save for 10 meters. For 6 u don't need the coil. The 2 meter antenna went up to 17.50 now its a 3/4 inch mounted and a great price. my Motorola lowband ant has been in use since 1969 and on 3 different cars Joe Leonard wb4igu

PS I have Motorola 6 meter FM gear free to all hams

Go with a horizontal antenna - they are best for SSB use. You will find that repeaters will be able to hear your signal even if they are vertical. If you really want to get a vertical antenna for repeater or other FM use - just build a j-pole with 1/2 inch copper tube. Plans are available at www.packetradio.com
The j-pole will be very cheap to make, it is easy to make, and I have found that it works just as good as the commercial vertical antennas. I used my j-pole to work Argentina from South Florida USA on side band!

>in my field out there!

Woops, make that "Cleveland, TN." Was setting up transport of a container to Charlie South (Charleston, SC) when I typed that. Did work Tucson, AZ and Montego Bay, Jamaica one evening w/10 watts and a quarterwave vertical from the parking lot of a local restaurant in Cleveland last year, tho! (OK, back on subject)

The details of the RST system can be found in your copy of "Now Your
Talking", an excellent study guide and a book I still use for reference.

Though I have been operating for only a few months in General Class, I have
noticed a lot of 58 and 59 signal reports.

I have never heard a 45 report which would mean: "Readable with practically
no difficulty" and "Fairly good signals".

Are we being polite or generous or what?

I am just starting out in 6m and would like to know
what the members of the group think about the choices
- Vertical or Horizontal Polarization for the antenna.
We have some 6m repeaters in the UK and so I will be
getting a mobile antenna, but I want to know which is
best for DX.

Tony G7NIZ

Hi Tony, For the 6 meter mobile antenna I have a van and ford full size auto.
For the van I took and old antenna specalists loaded coil type of antenna removed the plastic cover and removed the shorted feed and the loading coil.

then I soldered a jumper from the high side (ungrounded side of the input) to
the connector for the whip furled. I attached a full size whip about 46 inches and with the 2 inch spring plus the bottom where the coil was made it

resonate on 52.525MHz I placed this antenna in the center of my van. It works
excellent. worked lots of openings into Canada and south America. For my full
size auto that antenna worked also but I used the center roof location for my
2 meter 19 inch whip. So I used the right rear cowl for it and it did work but I hooked up my scanner for police calls to it. So for 6 meters I got a Motorola antenna from Motorola and mounted it on the left rear quarter

panel.
It totals out ton 57 5/8 inches I think. I got it free when I worked for
Motorola but at this time they are 113.00 for the 10 meter version including

loading coil which u can save for 10 meters. For 6 u don't need the coil.
The
2 meter antenna went up to 17.50 now its a 3/4 inch mounted and a great
price. my Motorola lowband ant has been in use since 1969 and on 3 different

cars Joe Leonard wb4igu

PS I have Motorola 6 meter FM gear free to all hams

Sounds like an illegal CB amp. There are some mods to convert them to 6M, but be careful, as most are poorly built and have no filtering. Probably have to rip out the tank and rebuild it. I have converted one over to 6M, the new tank and some filtering made a difference. The unit ran a pair of 6JB6's and would output around 100 watts when driven with my Alinco DX70T (10W in).

Give us some more details and center freq., I may have some info on converting one.

Andrew

In another email, someone said that is probably a CB amp. Change the tank circuit to six meters. Your relay problem is probably because the amp has an RF sensing ccircuit in it that detects the am or fm carrier and keys up. If you don't have a seperate line from the amp to the rig, that's probably it.
Don't forget to change the bias on the amp to class A or class AB. There is nothing worse than a ssb signal running with a class C amp! Good luck, Don K1DH

For DX, it really doesn't matter, as the polarization will change many times as the signal travels and refracts off the ionosphere.

For local work, you will want to try to be using the same polarization as other stations. Otherwise, you will lose about 20 dB over the path. In the US, the convention is horizontal for SSB/CW and vertical for FM.

Agreed. The only thing that really matters for DX is getting the
signal out twards the horizon, somthing a low angle loop or beam
favors. For a dipole hor/vert is mattering alot less, other than the
fact that most local QRM is vertical, so that 20db cross loss can be
used to an advantage.

I have started out listening for local repeaters using a Diamond dualband 2m/6m mobile antenna. The hills in this area appear to be a problem. Only one repeater heard out of 5. The Watson 2000 which I purchased originally to work from home with is much too big for my loft space to put up verticle, will have to try horizontal.

Depends. What's the SWR. Are you feeding it with coax?

I just put up an all band loop antenna, tunes from 80 - 6 meters, coax fec, no balun. SWR across the bard is 1.1:1 orbetter and very little noise. SO a balun might help, but only if a mismatch is your problem.

Hi, I had the same problem with an extra long antenna. It seems like they are able to pick up more noise the longer they are. Check to be sure you are not near any electrical sources of noise. I did this with an AM radio tuned to a weak station late one night walking all around till I found the quietest place in my yard for antennas. It was on the opposite side of my house from the electrical feed and there I erected my tower, and antennas. Joe wb4igu

Dont know what the true SWR is its on a tuner. Yes fed with coax. My 1 wavelength does a much better job with less noise. Maybe 5wl is too long?

I should be pretty ok for noise all the utilities are under ground But
Ill try that suggestion. I have a small yard though, so space is limited.

I doubt very much that a balun will make much of a difference on the S/N ratio. I think the suggestion about looking for local noise sources is a good one. Also, I can't think of any reason why a 5 L antenna would be worthwhile. I'd stick to the 1 L if I were you.

848. W4EHW Hurricane Season 2002 On-The-Air Station Test

From: James Carlin
Topic: 848 Message: 848

This mail came to me from a local ham radio mail list - I thought some of you who can get on HF might want to take part in the Hurricane Center radio test.

-- James KF4OUI

**** BEGIN FORWARDED MESSAGE ****

Announcement from W4EHW
Amateur Radio Station at the
National Hurricane Center

W4EHW Hurricane Season 2002 On-The-Air Station Test

Saturday, June 1st, 2002 9am-6pm EST (1300z-2200z)

The purpose of this annual Station Test is to test all of
our radio equipment, computers and antennas.
RFI monitoring is also done to NOAA & NHC equipment.
We will also be testing some new antennas and equipment that
are being installed for this coming season.
A few new operators will receive hands-on training.

W4EHW will be On-The-Air on HF, VHF and UHF
We plan on using the following phone frequencies +/-QRM
7.268mhz, 14.325mhz, 21.325mhz, 28.525mhz.
CW will be on 14.035, 21.035 and 28.035. PSK31 on 14.070.
South Florida area VHF & UHF Repeaters & 146.52 simplex & 144.200 ssb

Report your Callsign, Signal Report, Location &
Short Weather Report ("Sunny", or "Rain", etc.)

Non-Hams are invited to submit their actual weather using the
On-Line Hurricane Report Form at http://www.fiu.edu/orgs/w4ehw/WX-form1.html

Thank you for your participation in this TEST.

QSL Cards are available via W4VBQ. Please S.A.S.E.

Due to security measures, NO VISITORS will be allowed at NHC during this test.

Please forward this announcement.

73,
John McHugh KU4GY, Amateur Radio Coord. National Hurricane Center
Julio Ripoll WD4JR, Asst. Amateur Radio Coord. National Hurricane Center

850. What 6 meter vintage rig to buy?

Yahoo group: 6meter (2000 — 2003)
Date: 2002-05-07 21:54:02 UTC
From: george30213
Topic: 850 Message: 850

I am looking for a ventage 6m rig. I can locate swan 250 and new in box never used Yaesu FT620B, and maybe a Heath sb110a needing work.

Should I get one of these or just use my 706. 706 is in car and would like a vintage maybe in shack. I have a Kenwood TS-940 as my main rig and a Heath SB Hf series rig also. I do not have a 6m in shack.

I'm new to 6m. Made 1 contact in Dec 1st time on and then band went down. Would like to be ready for band opening again.

Any comments would be appreciated.

george@...

Topic: 851 Message: 851

George,

I have recently (30 days or so)gotten on 6 myself. I got a FT-620b and am pretty happy with it. I took it all apart and cleaned it up polishing the windows etc. Gonna align it as soon as I get thru with the other 3 bazillion (a very big number hihi) projects that somehow have priority. I have yet to be at the right place at the right time for an opening, but have chatted with a few folks locally. I put up a full wave loop horizontally mounted above my roof and that seems to work ok. A number of people have told me that I would need some more smoke and a better antenna for the F openings. With a tribander, 2m es 432 beam, G5RV variant, HF vertical and 2m ringo on a rented house, the 6m ant will have 2 wait hihi.
I also use a 940 and love it.

There is my 2 cents worth.

From: jerichatham1@earthlink.net
Topic: 854 Message: 854

I am at the point of purchasing a 6 meter rig and read recently(a post here) that you can detect band openings by watching TV channel 2. Where I live we do not get any VHF TV stations. Would it still do any good to monitor channel 2 and what would I watch for when there is no carrier there normally? The channel 2 is about 140 miles with plenty of mountains in between.

Thanks,

Bob KG6GOH

Hi George,
I have been on 6 since 1972, seen and own much
of the vintage radios. The FT620 had a bad TVI problem, weak filtration.
Many of the old tube rigs had poor sensitivity on 6M.
Stick with the new solid state stuff, as has been said here many times,
when the band is not open power is negligible, and when the band is open
10 watts is plenty.

PS: use a good 3 or 4 element beam, pointing E-W

Bob, when you start receiving that channel, the band is open!! I have heard Spanish (as in Spain..not South American) TV sigs when the band was wide open last year here on the East Coast. Normally I watch for multipath on Ch 2, when it starts I crank up the Swan 250C or the Yaesu.

Andrew

(And, by the way, the Swan is about as sensitive as the Yaesu {without the preamp}. Tube rigs can be QUITE good....still kick myself for selling the Drake 2B I used to have. Outperformed many much more expensive rigs, including SS rigs. Tubes still work!)

I guess it all depends on what you are looking for. CH
2 would be good stateside. If your set has a squelch
circuit or all you did was watch snow on the screen.
If you want to listen for europe you could listen on
48.250 for european video. For sporadic E listen on
50.125. You don't need your radio loud to hear someone
is talking. Good Luck, Don, K1DH

From: george30213
Topic: 861 Message: 861

I have been looking for heath 110a, swan250c but can't seem to find one.

So, I have found yaesu FT620B new (never opened box)only 10w I think, and a yessu FT101E and a new never opened FTV650B transverter for the 101 and a Swan 250 (not c). Antone have any comments on either of these 3 options or should I keep looking for the Heath which was my 1st choice.

I wanted an good "old rig", I have a 706 in the auto but need something in shack.

I will try to make contact - but it is in the hands of the 6 meter Tiki. If the Grand Tiki decides to open the band, then it shall be. However, if the Tiki is angry and 50 mhz is acting like another (noisy) VHF band then oh well - better luck next time.

What frequency should I listen / call on?

Greetings,
Listing a Kenwood TM-742A triband rig with 2M, 70cm, and the 6M module installed. CTCSS board also installed. This radio was purchased brand new 4/5/01 (original receipt will be included). This radio is in excellent condition and will also include the seperation kit (DFK-4) and the mic converter (modular plug to 8-pin mic connector)for use with Kenwood desk mics. This will be a cash only deal, as I am not interested in trades. Asking $850.00 FIRM and I will pay for shipping via USPS Priority Mail (insured, of course). Please call: 619-334-5829 or e-mail: n6six@...
Thanks and 73 de N6SIX

This is the 6 meter AM transceiver spotlighted by the IA QRP club a year or so ago. This is a rig designed by Rick Littlefield originally called the Nor'easter and published in Communications Quarterly. I have the board, the pots, a used CB modulation transformer, the modulator chip, the crystal filter (the good one), and the coil form. I am also including all documentation, addendums (some items in color), and a copy of the original article. I'll sell it for $25 shipped priority mail (lower 48). This is a really neat project. I've just never had the time/effort/parts to get it finished.

Dan KB9JLO

To all radio amateurs

SB DX ARL ARLD021
ARLD021 DX news

This week's bulletin was made possible with information provided by
Tedd, KB8NW, the OPDX Bulletin, EA3BT, JK1EBA, TA4KG, 425DXnews,
DXNL, QRZ DX, The Daily DX, WA7BNM and Contest Corral from QST.
Thanks to all.

ALGERIA, 7X. Mirek, 9V1XE is QRV as 7X0DX until May 28. Activity
is on 160 to 10 meters during his free time, usually after 1600z and
before 0500z. He has a portable setup for satellite AO-40. QSL via
DL4DBR.

KUWAIT, 9K. Members of the Kuwait Amateur Radio Society will be
active as 9K2F from Failaka Island, IOTA AS-118, from May 22 to 31.
QSL via 9K2RA.

ENGLAND, G. The Taunton and District ARC will be QRV as GB0SM from St. Mary's, Isle of Scilly, IOTA EU-110, from May 18 to 25. Activity will be on 160 to 10 meters using CW, SSB and RTTY. QSL via G3WNI.

MARIANA ISLANDS, KH0. Members of Mitsubishi Electric are QRV as KH0/JM1YGG until May 19. Activity is on 40 to 6 meters, including 30 and 17 meters, using CW and SSB. QSL via JM1YGG.

NORWAY, LA. A group of operators will be active with two stations as LA9M from Sekken Island, IOTA EU-056, from May 18 to 20. QSL via operators' instructions.

PERU, OA. Peruvian amateur radio operators are authorized to use the special prefix OC until May 19 to celebrate the foundation of the International Telecommunications Union and World Telecommunications Day. The official station of the Radio Club Peruano will be active as OC4O on all bands using CW and SSB. QSL via operators' instructions.

FAROE ISLANDS, OY. Tom, DL2RTK and Ric, DL2VFR will be active as OY/homecalls from May 20 to 22, from Streymoy Island, IOTA EU-018. This will also count for Streymoy Island Lighthouse. QSL to home calls.

MALYJ VYSOTSKIJ ISLAND, R1MV. Look for a number of operators to be QRV as R1MVI, and probably R1MVC, R1MVD and R1MVF beginning May 22. This includes an entry in the CQ WPX CW contest. QSL via operators' instructions.

CRETE, SV9. Tony, G4LDL will be QRV as SV9/homecall with QRP equipment. He should be here until May 31. QSL to home call.

TURKEY, TA. A group of operators from Radio Club Stip from Macedonia and two operators from the TA1KA Radio Club will be QRV as TA0/homecalls and YM0KA from Bozcaada, IOTA AS-099, from May 20 to 28. Activity will be on 160 to 10 meters, plus 6 and 2 meters, and 70 cm, using CW, SSB, RTTY, SSTV and PSK31. QSL YM0KA via TA1KA, and all others via homecalls.

REPUBLIC OF CONGO, TN. Josep, EA3BT and Nuria, EA3WL will be QRV as TN3B and TN3W, respectively, from May 17 to 27. Activity will be on 80 to 6 meters using CW, SSB and RTTY. QSL both calls via EA3BT.

CHRISTMAS ISLAND, VK9X. Bert, PA3GIO will be QRV as VK9XV from May 18 to 25. Activity will be on 80 to 10 meters, including 17 and 12 meters, using SSB. QSL to home call.

THIS WEEKEND ON THE RADIO. The Anatolian RTTY Contest, The World Telecommunications Day International Contest, His Majesty King of Spain CW Contest, Baltic Contest and the Manchester Mineira CW Contest are all scheduled for this weekend. Please see May QST, page 104 and the WA7BNM Contest Calendar website for details. NNNN

886. H.R. 4720

Yahoo group: 6meter (2000 — 2003)
Date: 2002-05-17 00:16:45 UTC
From: Jamie R. Dean - KE4HTM
Topic: 886 Message: 886

There is a new Bill in front of Congress that will effect the Amateur Radio Community.

I have included the ARRL article and the text that should be sent to your Representative in the text of this email.

This takes all of 3 or 4 minutes to do. Please forward this to your mailing lists.

Here is the process:
Go to http://www.house.gov/writerep
Look up your Representative based on your zip code.
Copy and paste the note below into the message text box and click the send button.
That's it.

Thanks,

Nathan Jaynes (KE4RCF)
President - Western Piedmont Amateur Radio Club

From ARRL Letter:

==>LANDMARK BILL COULD PROVIDE AMATEURS RELIEF FROM RESTRICTIVE COVENANTS
A bill introduced in Congress this week could provide relief to amateurs prevented by private deed covenants, conditions and restrictions--CC&Rs--from installing outdoor antennas. Rep Steve Israel (D-NY) introduced the "Amateur Radio Emergency Communications Consistency Act" on May 14. The bill has been designated H.R. 4720. Rep Greg Walden, WB7OCE (R-OR)--the only Amateur Radio operator in Congress--and Rep Pete Sessions (R-TX) have signed on as original cosponsors.

With respect to ham antennas, the measure would subject private land-use regulations to the PRB-1 limited federal preemption that now applies only to governmental zoning and land-use regulations. It contains but one sentence: "For purposes of the Federal Communications Commission's regulation relating to station antenna structures in the Amateur Radio Service (47 CFR 97.15), any private land use rules applicable to such structures shall be treated as a state or local regulation and shall be subject to the same requirements and limitations as a state or local regulation."

H.R. 4720 is expected to be assigned to the Telecommunications and Internet Subcommittee of the House Energy and Commerce Committee.

Israel, whose father, Howard, is K2JCC, noted in a statement read into the Congressional Record that the FCC does not now apply PRB-1 consistently.

"My bill addresses this issue and provides amateur radio licensees with the ability to negotiate reasonable accommodation provisions with homeowners' associations, just as they do now with public land-use regulators."

After the ARRL ran into a brick wall trying to convince the FCC to include CC&Rs under PRB-1, the League's Board of Directors agreed to pursue a congressional remedy. ARRL President Jim Haynie, W5JBP, and other League officials met with Israel, Walden, Sessions and others on Capitol Hill earlier this year to discuss the prospect of such a bill and how it should be worded. With the proposal now in the legislative hopper, Haynie urged ARRL members to write their members of Congress and voice support for the measure.

Haynie said the important thing to point out is that the bill, if passed by both houses of Congress and signed by the president, would give amateurs living under CC&Rs an opportunity for reasonable accommodation they don't have now.

Visit the US House of Representatives "Write Your Representative Service" Web page <http://www.house.gov/writerep/> for information on how to contact your representative. A sample letter is available on the ARRL Web site <http://www.arrl.org/news/stories/2002/05/14/102/sample-letter.html>.

ARRL requests those writing or e-mailing members of Congress to copy ARRL on their correspondence--via e-mail to ccr-bill@... or via US Mail to CC&R Bill, ARRL, 225 Main St, Newington, CT 06111. Include the bill number--H.R. 4720--your name and address on all correspondence.

Here is the message text....

**********Cut starting here
****

I urge you to co-sponsor H.R. 4720, the "Amateur Radio Emergency Communications Consistency Act," sponsored by Rep. Steve Israel. The bill would alleviate a problem facing many federally licensed Amateur Radio operators living within development communities who are subject to unreasonable restrictions or outright prohibitions regarding the installation of external antennas.

Under current law, the FCC applies a policy that instructs states and localities that they must reasonably accommodate Amateur Radio antenna. The policy, however, fails to address situations affecting private land-use groups. Rep. Israel's bill would ensure consistent application of these regulations.

This legislation seeks to insure that Amateur Radio operators are available for emergency communications in all sections of the country, regardless of whether they live in a development, such as a retirement community, or townhouse subdivision. Restrictions against antennas render Amateur Radio operators unable to utilize their licenses, which in turn may ultimately

hinder their emergency communication role during times of disaster or national crisis.

Amateur radio provides a vital public safety communications service to the public at no cost to taxpayers. I hope you will join Rep. Israel in co-sponsoring his bill.

I look forward to hearing from you as you consider this important legislation.

********** Cut stop here**********

Gun Control: The theory that a pilot found dead in a smoking hole in the ground, blown out of the sky by his own government, is somehow morally superior to a pilot explaining to police how his hijacker got that fatal bullet wound.

890. Hi-Par Mountain Topper

Yahoo group: 6meter (2000 — 2003)
Date: 2002-05-21 12:55:30 UTC
From: JonathanCurry
Topic: 890 Message: 890

Hello to the list:

I'm looking for info and dimensions for the Hi-Par
Mountain Topper. This is the 3 element portable yagi
that was made in the sixties along withe the Saturn
Six 3 ring Halo antenna.

I have the antenna and is in need of refurbing. Replacement of
hardware and the like. I would like info since the previous
owner took it apart, and I think, put it back together incorrectly.

What I relly need is the spacing for the Reflector nad Director from
the Driven element.

TNX

Jon:

P.S: Anyone using the Cushcraft Squalo or Saturn 6. If so I'd like
to hear your thoughts on these antennas. I have both, and will
get around to installing one on the van soon.
TNX again:

My guess and memory says that the reflector is further
away from the driven than the director. Every 3
element yagi I've seen is set up that way. The driven
should be forward of the boom-to-mast clamp. Try
that. You won't hurt anything. Good luck, Don K1DH

Help me out since I am new to 6 meters and want to
purchase a transceiver........
Do I purchase a FM only rig.......or do I need SSB
like the Ranger......in addition, what wattage should
I look for in a rig,,,,,10W 25 W or 100 W.........

and what about tones, the Ranger 6 meter doesnot have
a tone board but one can be added.....

PS I Live in the east coast in VA..if that helps with
what equipment I need to purchase....KG4RGN thanks and 73s

Personally, I would purchase a rig that includes SSB. FM is (usually) reserved for local use although on 2-meters. However, there is an FM-DX frequency....144.425 (horiz.antenna!)....and so there may be one for 6-meters also. SSB is what you will need for DX....especially into Europe.
Personally, I like 6-meter AM and use that for local as well as DX (Now that's a challenge, as few people use AM today).
If you're interested in AM I suggest the '706. The AM sounds good when compared to the rig I own: A Yaesu FT-100 (w/AM filter installed).
For SSB (andAM) you'll need a horiz. antenna of at least three elements. For FM, a 'stick' or a rotable, vertically-mounted yagi (or beam) is preferred.

Good luck!

Larry, try the Icom 706MkIIG, the FT100D from Yaesu (avoid the earlier models of both, unless they're cheap) and the Alinco DX70TH (the -H has 100 out on 6M as opposed to the straight DX70T's 10 watts...but neither have 2M/440 capability). Older rigs, the Yaesu FT736R, the Icom 551 (?? think that's the number) and the Icom 746. Lots of other rigs out there for 6, avoid tube rigs unless you like to tinker (I like 'em, but some don't). DO get a rig w/SSB, the above rigs are all-mode so you get SSB/FM/CW. When the band is open (like last night...but we had my wife's family in.....couldn't get on!!) you can work the world on 10W. Horizontally positioned antenna is what you need for DX (start at 50.110 and work up to 50.200...50.400 is the AM calling freq., 52.525 is the FM calling freq.) Hope to hear you on 6M...you're in FM17 (grid square) if I'm looking at the map right. If you can put up a beam, look at the Cushcraft 5 ele. beam...I have it's little bro, works well for my purpose. If not, visit the packet radio page, good J-Pole ideas and Par Electronics has the Omniangle for 6M. Small, but efficient.

Cheers!
Andrew
(PS. Do you glow in the dark?? Like the photo on QRZ! <<grin>>)

901. Re: [6 Meter Sked] Band opening

From: Keith
Topic: 897 Message: 901

Depends mainly on budget and where you want to talk.
If you want to DX, SSB is the way to go and a directional horizontal antenna is preferred, (BUT, I have worked all over North America with 5watts and a quarterwave verticle.)
If there are repeaters in your area, you need FM and PL tones, (and MEMORIES that store odd splits and different tones). Six meter repeaters are great and cover a BUNCH better than 2 meters (and higher).
You can work DX on FM on 52.525 but not nearly as many folks are there compared to SSB when the band opens......
.....Keith WE6R

Help me out since I am new to 6 meters and want to purchase a transceiver.....
Do I purchase a FM only rig.....or do I need SSB like the Ranger.....in addition, what wattage should I look for in a rig,,,,,10W 25 W or 100 W.....

and what about tones, the Ranger 6 meter doesnot have a tone board but one can be added.....

PS I Live in the east coast in VA..if that helps with what equipment I need to purchase....KG4RGN thanks and 73s

902. Re: [6 Meter Sked] Band opening

Yahoo group: 6meter (2000 — 2003)
Date: 2002-05-22 15:56:24 UTC
From: Joe Acevedo
Topic: 897 Message: 902

I think the key here is making the most with what you have and what you can afford. Just because your 6 meter radio is FM only doesn't mean you have to miss out on the great band openings you read about here.

As Keith alluded to in his reply, there are many times that a 6 meter band opening will not reach the Primary Call Frequency of 52.525MHz. This is why, by "gentleman's agreement", 50.300MHz has been set aside as an FM DX Call Frequency. This designation is observed in many areas of the country (including down here in SoCal). I can't tell you how many times I heard stations from the North East and Mid-Atlantic regions plow into San Diego on 50.300MHz last fall and winter.

Hope to hear YOU on SIX!!

Hi all-
As you all know, the band is pretty open. Just completed my first 6m contact outside of New Englend...from my QTH in FN34 to EL97. YES!!! I'm running only 10W into wire dipole sloping from about 10 feet high at one end to a bit over 20 feet at the other. I'll be listening and calling CQ on 50.125 most of the evening. Turn that beam toward central Vermont and see if we can take advantage of the conditions!!

I've not heard anything on 6 Meters here in Phoenix either.
But then all I have is a 2M/6M mag mount which is, of course,
mounted vertically.

But we can set up a time to QSO on 6 if you want so we can see
if 6 meters works at all here.

Hey bud..

I run 52.525 FM most of the time on the vertical.

I have a 5 ele horz at 40FT for the ssb work. The bandwidth is very narrow on this antenna so it is only good for 50.0 to 50.8

I have the icom 551 10 watt.

email me direct or get on 441.200 PL 77 {I don't listen to 7.24 all the time but you can try}

6 meters works. What you need to do is improve that antenna setup. Of course a beam is always the best - BUT for $20 I built a copper pipe j-pole. Yea it is mounted vertical but only a few weeks ago I worked 2 stations in Argentina and one in Uruagry. These contacts were made on USB with 100 watts. Just because you are vertical does not mean you cannot enjoy the world SSB. If you can put up an outside antenna, and your looking for an easy to build project that will only cost around 20 beans for materials, the copper pipe vertical works.

My biggest problem with the copper j-pole is that when it rains, the antenna SWR jumps up. Of course I live in South Florida - you live in the desert, I would wager that I see quite a bit more rain than you do on any given year.

910. Re: [6 Meter Sked] Digest Number 143

Yahoo group: 6meter (2000 — 2003)
Date: 2002-05-22 20:58:32 UTC
From: Dan/W4NTI
Topic: 910 Message: 910

During last evenings intense E-skip opening I noticed what I see in every opening.. Folks not moving OFF THE CALL FREQUENCIES and using the area between 50.1 and 50.125 for domestic chit chats.

Perhaps some folks don't know but lets review a bit...

It is fine and dandy to sit on 50.125 and / or 50.110 and LISTEN or make a quick call to 'check the band' so to speak. But if you make a qso it is considered good form to move off the call channel. And FYI if you don't know 50.110 is used for DX ONLY.

What you should do is just move UP from the .125 freq and start spreading out. As the opening gathers strength start looking and CALLING way up the band. Some folks recommend and monitor using 50.200 as the domestic call freq. I agree, but I see most folks still use .125.

Last night I sat on 50.150 for a while, then got run off and I went up to .190. I worked 49 stations last night. And never made a sound on the 'call freqs'.

Hope I had a qso with some of you on this reflector. If not I'll look forward to the next one. And remember ALWAYS include a SASE with a QSL request.

Dan/W4NTI Alabama EM73

I suppose there is a grid square map somewhere on the internet. but I use a grid square chart printed up by Icom that I got from the last hamfest. Be at the gate EARLY and make a B-line to the Icom dealer booth as soon as they let people in and you can get your copy! It shows the grid squares for all of the USA including Alaska and Hawaii. You can also download the grid square and band plan chart from the Icom website. The grid square map is really handy to have on the wall by your radio gear - the band plan chart is nice to have but not as cool as the grid map :)

You can also look up your own callsign at www.qrz.com and get your grid square. On QRZ you get your grid square in its more accurate (less often used) format. It will look something like this AX##AX where AX=some letter and #=a number. Most people leave out the last 2 letters - the last 2 letters are sort of like a zip code. If we are talking over the radio all you really want to know is I am in Miami Florida - you probably do not care to get into details like "I live in the miller heights subdivision of Miami Florida".

Subject: [6 Meter Sked] Grid Squar Map

Here is a pretty good grid square map for quick reference.

It would be helpful if folks would give their grid square AND city/state when reporting openings......
Personally, I prefer the city/state, don't always have a grid map handy...

From: Keith
Topic: 920 Message: 920

OK, is there a better grid map locator online?
I.E. Something that starts out like http://www.qsl.net/vhfnews/grid-na.gif THEN you could zoom in and see county lines/cities and get the final fine grids, I. E. "CM96BM" or the like.
My Garmen GPS will give me the later fine info, BUT does NOT show a map so I can see where I am!!!!

Maybe I need to fix the boat that is rotting away in the backyard, outfit it with a all mode 6 meter rig, and operate from grid FL05! According to my map FL05 starts just outside of Biscayne Bay - not a problem even for a small craft. The saltwater would make for an EXCELLENT ground, maybe that would make up for the lack of height. Anyone log any stations in FL05?? If you did they were not on land :)

From: Jamie R. Dean - KE4HTM
Topic: 922 Message: 922

On Monday, May 20th, 2002 at approx. 4:00am
The Dell Dimension P133v past away. After a 30 min.
fight to remain alive, the Dell, while downloading Windows
98 updates shut down for the last time.

The 90 MHz. Dell lived a good life. Born in 1989,
it worked in a factory till out sourced to the loving
home of Beth and Jamie Dean in 2001 where it
was used by Beth and grandson Thomas to
browse the Internet, check e-mail and send instant
messages.

The Dell was an organ donor and some of it's
parts will be used to enhance another computer.

No funeral date has been set by the family/owners
at this time. But there will be a mass e-mailing letting
friends and family know of the date, time and place.

It looks like your radio is being overdriven by channel 2. (VHF TV)
Channel 2 sits just above the 6m band.

The beacons are in the lower end of the 6m band plan. Generally the beacons
are below 50.110 someplace...(I don't have the band plan close to me to look
it up.)

Thanks John... I am very new to this hobby... time to brush up on the 6M band plan ;-)

I am buying a Ranger 6M rig today... and I am putting up a Diamond tri-band verticle. For good SSB DX what should I tune the antenna to ? I figure 51.000 would be best, as there are no local FM repeaters on 6M and most of my work on 6m will be SSB DX.

Tom, the calling freq. for 6M SSB is 50.125. Last night, worked several stations between -.125 and -.175. Lots of folks between 50.125 and 50.150, so I'd start there. Wait 'til you hear someone either call CQ or QRZ, reply with your call. Don't be disappointed if it takes awhile to make some contacts...everyone is excited that the band is now open....I actually heard a bit of a pileup on a Canadian station! BTW, the calling freq. is just that....to call on. QSY up the band to a clear spot once you've made contact if you want to ragchew. I'm running the same wattage as you (25W) but have an amp "when needed." A horizontally polarized antenna will do better, but I've worked several SA countries with a Jpole!

Welcome to 6 meters!
Andrew

(PS. Beacons are 50.000 to 50.90 more or less....heard one in NS, Canada last night on 50.03 IIRC, another on 50.61 in VA area).

Tom,

I have the same antenna and would not recommend attempting to retune it at all - it will only mess things up on the other bands. The SWR will be a bit higher on the bottom of the band where the SSB activity is but unless your rig starts folding back on its output power I wouldn't be overly concerned about it. It didn't stop me from working Texas, Alabama, Florida and New Jersey during last night's opening. I also heard TI5RVV in Costa Rica but propagation didn't hold out long enough to work him.

As for the beacons, like the other responders I suspect what you heard were spurs or other stray signals. If they really were beacons they would have been IDing in CW which makes 'em pretty easy to identify. Beacons typically transmit their callsign, grid square and optional information (i.e. city or state/province) followed by a continuous tone of 5-10 seconds.

I normally don't allow attachments on this group and this is a one time deal, but it seems most of you don't have and don't know where to get a US Gridsquare map. Since 6 meters is dependent on grids in each contact. I have attached to this e-mail the ICOM USA GridSquare Map. It has been scanned by Norton Anti-virus for any pesty critter and is safe. The file is in Adobe Acrobat format. (the acrobat reader is free from www.adobe.com) I hope your enjoy.

73 and Great DXing,

935. Returned mail: Delivery Failed

Yahoo group: 6meter (2000 — 2003)
Date: 2002-05-23 16:31:41 UTC
From: gw0pjf@v21.co.uk
Topic: 935 Message: 935

The attempted delivery of "[6 Meter Sked] USA Gridsquare Map." failed for the following reason:

550 ... Mail too big for users mailbox gw0pjf@...

936. 6 is wide open!

Yahoo group: 6meter (2000 — 2003)
Date: 2002-05-23 17:43:24 UTC
From: James
Topic: 936 Message: 936

Well, I finally have made some contacts on this rig after 6 months of nothing.

6 looks like it is wide open, grab the mic's and shoot it!!

944. Re: Heard some beacons at FN25

Yahoo group: 6meter (2000 — 2003)
Date: 2002-05-24 10:53:40 UTC
From: dx11meter2@aol.com
Topic: 944 Message: 944

I use several antennas on six meter. For FM and repeater work I use a Ringo. For local simplex I use a vertical ham stick and for Am/SSB I use a horizontal dipole made from a mounting plate and 2 ham sticks tuned for the lower part of the band. All are connected through a 3 position antenna switch. I have limited room and no space at this time for a beam hence the antenna grouping tuned to different areas of the band. I also have a wire dipole for traveling. Had I known more about 6 meter when I started I would have just made two ham stick dipoles and run one vertical tuned to the upper part of the band in addition to the second horizontal one I have. As for the radio I run an Alinco DX70TH all mode HF/6. I bought this rig at the local candy store. It had been returned and I bought it as such with full factory warrantee for $425.00, almost 1/2 price. It has a tone board and provides 100 watts out on 6 meter (also does 10 and 50 watts) and is all mode in 6.

Al/KB1GZE

945. New 6 Meter Rig

Yahoo group: 6meter (2000 — 2003)

From: AF3LMike@aol.com
Topic: 945 Message: 945

Hi,
A friend of mine sent me a page about a new 6 meter rig that may be on the market by June. It is the Ranger RCI-5054DX-100. 100 watts on SSB and 50 on FM and AM. The rig was sent to the San Diego Six Shooters Amateur Radio Club to try out for a while and there website gives you a preview of the new rig. The address is http://n6six.50megs.com/custom2.html The club gives it a good review. Enjoy.

948. Openings Last Night - 23 May

Yahoo group: 6meter (2000 — 2003)
Date: 2002-05-24 13:52:30 UTC
From: rodneyvorndam
Topic: 948 Message: 948

Needless to say the band was open last night! I had a blast...worked 35 different stations from Colorado to VA, SC, GA, TN, MS, MO, IL, MN, WI, IA, OH, and Canada. If I was lucky enough to work you, QSL cards will go out this weekend. This was only my third 6 meter opening...what a night. 73's See ya on the air. Rod K9ROD

PS. My grid square is DM77 which seems to be rare ... worked a guy last night with over 650 grid squares and gave him a new one!

Loggers? Aren't those the guys who live in Canada / Alaska and make a living chopping tall plants down? :)

I use the classic method of detecting band openings - I turn on the radio and listen. I might even call CQ to see what happens. I also use this mail list, people here are VERY quick to report a band opening (THANKS GUYS!!!). I would have probably missed the last few openings if not for this list.

953. W4EHW Hurricane Season 2002 On-The-Air Station Test

Yahoo group: 6meter (2000 — 2003)
Date: 2002-05-25 02:07:24 UTC
From: James Carlin
Topic: 848 Message: 953

I sent this message to this list a while ago - this is just a friendly reminder for those of you who can get on HF that if you want to try to talk to the National Hurricane Center located at the lovely campus of Florida International University in Miami Florida (as a graduate I am required to say that..its in the "get your degree" contract they make you sign in your own blood).

Yea I know those guys do not do the 6 meter thing - I tried to make them see the light, but you know how the NWS is - they cant even tell me if it will rain this weekend or not :)

Anyway - mark your calendar for this event. Even if you can not talk on HF, you can listen. In the event of an actual hurricane forget the noise you might hear on the local news - get the info direct from the source on HF!! They even do HF APRS to track storms in real time.

for more info about the Hurricane Center. click on www.ihc.fiu.edu

-- James KF4OUI

**** BEGIN FORWARDED MESSAGE ****

Announcement from W4EHW
Amateur Radio Station at the
National Hurricane Center

W4EHW Hurricane Season 2002 On-The-Air Station Test

Saturday, June 1st, 2002 9am-6pm EST (1300z-2200z)

The purpose of this annual Station Test is to test all of
our radio equipment, computers and antennas.
RFI monitoring is also done to NOAA & NHC equipment.
We will also be testing some new antennas and equipment that
are being installed for this coming season.
A few new operators will receive hands-on training.

W4EHW will be On-The-Air on HF, VHF and UHF
We plan on using the following phone frequencies +/-QRM
7.268mhz, 14.325mhz, 21.325mhz, 28.525mhz.
CW will be on 14.035, 21.035 and 28.035. PSK31 on 14.070.
South Florida area VHF & UHF Repeaters & 146.52 simplex & 144.200 ssb

Report your Callsign, Signal Report, Location &
Short Weather Report ("Sunny", or "Rain", etc.)

Non-Hams are invited to submit their actual weather using the
On-Line Hurricane Report Form at http://www.fiu.edu/orgs/w4ehw/WX-form1.html

Thank you for your participation in this TEST.

QSL Cards are available via W4VBQ. Please S.A.S.E.

Due to security measures, NO VISITORS will be allowed at NHC during this test.

Please forward this announcement.

73,
John McHugh KU4GY, Amateur Radio Coord. National Hurricane Center
Julio Ripoll WD4JR, Asst. Amateur Radio Coord. National Hurricane Center

MOLON LABE!!!
It is not the business of government to make men virtuous or religious,
or to preserve the fool from the consequences of his own folly.
Government should be repressive no further than is necessary to secure
liberty by protecting the equal rights of each from aggression on the
part of others, and the moment governmental prohibitions extend beyond
this line they are in danger of defeating the very ends they are intended to serve.

Having worked all states (WAS) on 6 meters within 30 days in
November/December of 2001, I agree. That's why they call it the Magic Band!
I worked Pitcairn Island and other South Pacific DX during the same time
frame. Yes, there are other times when you'd swear soeone cut the coax!
Patience is required.....73, Joe WL7M

I've been on 6 meters for close to 4 years. I have learned that you have to have patience and you have to listen about all the time for an opening. You can't turn on the 6 meter rig for 5 mins a day go CQ CQ then if you hear nothing turn it off and walk away. You will never make a contact this way. 6 meters takes hours of dedication. You must be able to monitor about all the time to hear the action. 6 meters is no good for the ham that can't devote a radio or large amounts of time to the band. Granted you may monitor for 2 months and hear nothing but at any time day or night you may hear far off DX. And then the opening may last 6 hours or 5 mins but if your not there then you will never know. I guess what I am trying to say is, 6 meters is for the die hard DXers. You know the ones that live, breathe, and sleep for DX and the love of radio. Six meters will never be a 2 meter style band that the part time ham will enjoy.

Don ,
He is talking about the sound card digital mode MT63. Some hams like to work digi modes on 6 meters. It's hard to find them but it is happening. I like working PSK31 and SSTV on 6 meters. It's a blast.

Jamie,
You're absolutely right!! One MUST be patient!

Although I mainly work 15 and 20-meters I must confess I have been a 6-meter fan since 1959 and it is STILL my favorite band.

To be perefectly honest, AM is my preferred mode of operation on six. I have worked Europe and Iceland on SSB, but to be able to work Oregon, Wash. (state), or Calif. on 6 is fun.

Hey,

Alvin, nothing doing on 6M up here. It's been real quiet all day, no line noise, even. I was just starting to think AEP had fixed it, when I noticed the antenna coax was still disconnected from last night's thunderstorms... But it's still quiet, except for the *&^% line noise.

Sherry said you were missing going to Dayton, so I thought I'd send you a pic. I took several, but they're about 64K apiece, so I'll send one first and see how it turns out. Do you have a private e-mail account? If not, I can ftp them to my webpages, so you can see them there.

The band was open for a while last night in my area and I was around to enjoy it for a change. I heard several stations in the Midwest then it swung around to the East coast area and I heard and raised several stations from Tennessee south to the Keys, then it dropped out as quickly as it started. I normally have the rig on when I am home. This rig is dedicated to 6 meter and I have been lucky enough since I bought the radio to catch several openings.

Date: 2002-05-28 07:08:09 UTC
From: Don
Topic: 985 Message: 986

Well If your Dipole is Cut and tuned for SSB , t Might be Wise not to use it on Your HT If the SWR Is High , Most FM Is between 52-54 Mhz , You Could just make another Ant for FM . On band Openings you will do Just Fine if the band is in Really Good shape , But I have fond Many times SSB Around 51-52 Really Crowded and I would Check 52.525 , The Calling Freq and hear No one.

Good Luck 73 De Don KA9QJG

Yahoo group: 6meter (2000 — 2003)
Date: 2002-05-28 07:08:38 UTC
From: Jamie R. Dean - KE4HTM
Topic: 985 Message: 987

The horizontal dipole will work, some what. But close to 100% of the FM repeaters on 6 meters are vertically polarized. In my opinion you should have a vertical dipole for FM cut for 52.525 and a horizontal dipole for SSB cut for 50.125 since both these freqs are you calling freqs. Note the freq. you cut for on each dipole is preference. You could cut for the dead middle of the FM portion and SSB portion on each dipole. But you will find the SWR goes high towards the end of the freq range. Hope this helps. And when you start making some 6 meter contacts on the VX5r give a a little revue of it.

73 and Good DXing,

Jamie R. Dean

988. Beacons anyone for six meters

Yahoo group: 6meter (2000 — 2003)
Date: 2002-05-28 13:04:21 UTC
From: w1nra
Topic: 988 Message: 988

I am in the process of putting a beacon on 10 meters and I have almost everything to put one on 6 meters but while I hear 10 meter beacons all the time. I NEVER HEAR ANY ON 6 so wonder if it is worth the trouble to put one up there.
Do any of you hear beacons regularly on 6 meters? I have yet to hear the first one. I haven't listened everyday but I did work 38 states in 5 or 6 months a couple of years ago. So maybe I just have missed them but don't even know where to listen for many of them. I do listen from 50.100 down but nothing. I know the cycle is over the top now but still listening for anything.

I have a MFJ 9406 that I got from a friend KR4M Cliff Watson, (now a SK) He worked ALL STATES IN LESS THAN A YEAR ON THIS LITTLE MONSTER. I think that was great, really termendous for six meters. He used a mirage amp for the last several months. Anyway I thought I'd put this on the air for the beacon at 5 or so watts and see if I got any reports.

After I get the 10 meter bcn on I'll think about the 6 meter one again. I also have a 6 meter ground plane, that I got from another SK, W4ZBA, it was still in the box, cushcraft model that they don't even make anymore and it was packaged with newspapers from 1967 !!!! Never been opened so it is still "new". hi hi

Check out my site for 10 meter beacons. new so will take a while to get going but I found a lot of interest in the "bcn's".

Hello !

Well, I have my new RCI 5054 6m radio setup... I can't seem to hear anything (other than VERY weak) signals on 50.100-50.200 SSB using my discone. I did have a chat with VA4FD via SSB (local) so I know my radio and antenna work reasonably well.

Is the band dead right now ? I am installing a new antenna in a day or so so I hope the band opens up soon.

995. New 6 meter beacon on 50.083 MHz!

Yahoo group: 6meter (2000 — 2003)
Date: 2002-05-29 16:15:09 UTC
From: rboux
Topic: 995 Message: 995

Hello all,

There is a new 6 metre beacon on the air on 50.083 MHz. It Id's like this... VE4BCN/B EN29 with a beep every two seconds or so after, for a total loop of about 30 seconds. It is located in south/eastern Manitoba (Brereton Lake)near Rennie, Mb Canada. Beacon is a modified MFJ-9406. Output is around 10 watts CW. Vertical 1/2 wave diploe at 30 feet. 24/7 operation. Email for beacon is ve4bcn@...

Hope to work you on the band!

When I was in Manila operating as DU1/N6HPX, I
heard most of my contacts at night..meaning that Japan
was only heard after 10 or 13 utc.
I tried the beacons as well,but the only one I was
able to hearwas possibly Fiji, and it was sporatic..
On FM my dipole never got very far,and my 2 friends
there,du1ms,and du1ev had a hard time hearing my
signals..and we were close..like 10 miles.
My dipole is made in Japan by diamond, its a w215s,
and is about 15 feet above ground.
I also have the vx5r and I work for the navy on
there ships..when I was in SDiego, I had good contact
with N6SIX, but a ham closer to me could not hear me
as strong,and I was on the third floor of a hotel
building.

A disconne to the worst 6m antenna that you can buy. I owned one and couldn't even hear the local 6 meter repeaters on it. When I moved to the 3 ele. horizonal beam it made a world of difference and for the repeaters the Diamond DPGH-62 brought the repeaters and FM simplex alive.

Subject: [6 Meter Sked] band dead ?

Hello !

Well, I have my new RCI 5054 6m radio setup... I can't seem to hear anything (other than VERY weak) signals on 50.100-50.200 SSB using my discone. I did have a chat with VA4FD via SSB (local) so I know my radio and antenna work reasonably well.

Is the band dead right now ? I am installing a new antenna in a day or so so I hope the band opens up soon.

I would think twice before buying the module for that 742. You are going to spend about $330 for that module new - and you will only get FM with 50 watts. While the power output is not bad, I think the price is a little high. For that same amount (or slightly less) you can get yourself the Ranger 6m all mode rig. That radio has 1/2 the power but you get sideband and AM. When the band is open SSB is where you want to be.

I have a kenwood 742 and I cannot understand why they price it like they do. The thing is quite a bit more expensive than a new dual band radio, and the modules are almost as expensive as new single band unit! The AES catalog price for the 220 mhz module is $330, and I bought a NEW Alinco 220 radio for $220 at a hamfest! That is over $100 LESS than the kenwood module.

Outfitted with a module, buying everything new, your looking at around $1000 for 3 bands. TOO MUCH! I doubt I will ever install a third band for that radio unless a module falls off a truck and I happen to find it laying in the street. Now if the price for a module were a bit lower (like say 1/2 the price for a similar new monoband radio) I might consider the 1.2 ghz chip....but they want something like $400 for it!

Not that I am getting down on Kenwood - they make some good stuff. Along with the 742 (that I obtained from a SK estate) I bought the V7A (blue screen dual band) and D-700 (dual band with built in TNC for instant APRS) new at hamfests - and I am looking at that cool new F6A 2m/220/440 HT. I just think the price for the 742 and its accessories is over-inflated.

-- James KF4OUI

I am looking for a module for my Tribander any one that may have a 6
meter module,that would like to sell it let me know.

Subject: [Ham-ATV] Help Identifying an ATV Transmitter

Hi all,

Perhaps this is not a repair question, but I assure you that when I get the info, I will be repairing the unit in question.

I purchased an ATV transmitter (the fella said I was gonna get some documentation) from EBay, to complete the other end of the father/son atv link between San Jose and Monterey.

Well as one might expect I got no documentation and the transmitter, while working, is terribly out of alignment.

Here is where you come in: I have posted a photo of the unit sans the Hammond box that it was in at:
http://kj6fd.freeservers.com/Temp/ATV%20Bd%20Front.jpg

Please have a look and let me know if you recognize it. I sent the photo to PC electronics and Wyman and it is not one of theirs. The Dip switch selects one of four frequencies in the 70cm ATV band. The output module is a toshiba 8 watt device.

I would certainly appreciate the help.

Thanks es 73

Jeff,

The board that you have was made by a couple of guys from Arizona about 8 years ago if I remember correctly. All I remember is Earl Campbell as one of the guys and K8SJ comes to mind.

The board was packaged in a blue Hammond box and sold by Paulden Associates as a PD-ATV-5. I have 2 here without documentation and also in need of alignment or something cause I have little output & the brick gets hot. I just not have taken the time to research it any.

Let me know if you find anything else out.

1018. Re: [6 Meter Sked] Question/thought

Yahoo group: 6meter (2000 — 2003)
Date: 2002-05-31 18:16:29 UTC
From: Jamie R. Dean - KE4HTM
Topic: 1010 Message: 1018

My first 6 meter contact was during a thunderstorm into Thunder Bay, Ontario, Canada. This was in 1994, on FM. I am one of the few, maybe stupid, people that will talk during a storm. I have seen 6 meters come alive while a bad storm was right over head. It is really cool.

1026. FT-817

Yahoo group: 6meter (2000 — 2003)
Date: 2002-06-01 23:30:51 UTC
From: horseshoe7
Topic: 1026 Message: 1026

Just purchased a Yaesu FT-817, and am waiting for it to be delivered.

The main reason I purchased this unit, is for 6m QRP use. I've heard the stock rubber duck(with 6m tip) leaves something to be desired, performance-wise(anyone have a gain estimate on this antenna?). Does anyone have any recommendations on antennas specifically for 6m use? This unit has both BNC and SO-239 connectors. The question is mainly in reference to to portable/mobile operations, as I'll probably just set up a 6m beam for home base station use.

I've always wanted a real 6m rig, but never really got around to getting one... I did(still do) have an old Motorola MOCOM-70 that I set up for 4800bps data use on 50.14Mhz in the early 90's - but it wasn't a "real" 6m radio. The thing came with a mobile fender-mount whip antenna(1/4 wave?) that I attached to the side of a file cabinet at home, and which I may now try to attach to side of my old '81 Ford F-250. But, I'm thinking I could do better, gain-wise, than this old antenna.

1027. Solar burp?

Yahoo group: 6meter (2000 — 2003)
Date: 2002-06-02 00:18:50 UTC
From: Dan/W4NTI
Topic: 1027 Message: 1027

Did anyone hear a sudden rise in the noise level, slowly dropping off, then peaking once more but lower than the initial burst?

It happened at 1847 (6.47PM) Alabama time (Central) or
2347z Saturday 1 June 2002.

There is supposed to be a possibility of another solar flare. Just wondering if anyone else picked it up. I was pointing to my NW.

For fm the 1/4 wave ball and spring is about as good
as it gets. It's a full quarter wave and is almost
indestructable. If you want an antenna for ssb then
find a halo. Horizontal polarization. 73, Don K1DH
p.s. watch out for the carwash with either one :-)

Hi and congrats on the new FT 817. It is a great rig, I've owned one now for over a year, and I absolutely love it. Use it for everything...HF cw and digital, local v/uhf, and have made some great contacts on six as well. It filled the gap well when my FT 100d had to take a ride back to Yaesu. Worked the carribean from Michigan during the big openings over Christmas with the baby rig. I use a 5 element yagi up 70 feet at home and a radio shack mag moiunt on the car. The mag mount is actually a mobile scanner antenna they sell. I got mine in a trade, so I don't know what kind of gain that it has, but it does the trick during good openings, and also does fine job on 2 and 70cm also. I've never used the stock duckie for six, othewr than to confirm that it does load up. Put up a horiz. dipole if nothing else and save that vertical of yours for local FM work. Hope to hear you on es good luck with new rig. I know you will be hooked on it...73 from EN56...VInce KA8FFM

Well I have one up a running in EM-64 and I check in to the North East Alabama Six Meter Net www.neasmn.org almost every night Monday thru Friday pm CST. on 50.150 USB. I use a Par Electronics Loop OA-50 for 6 and I get good signal reports and Have worked abt 35 grids and 4 countries from here on 6 with this setup from my apartment.

Subject: FT-817
Just purchased a Yaesu FT-817, and am waiting for it to be delivered. The main reason I purchased this unit, is for 6m QRP use. I've heard the stock rubber duck(with 6m tip) leaves something to be desired, performance-wise(anyone have a gain estimate on this antenna?). Does anyone have any recommendations on antennas specifically for 6m use? This unit has both BNC and SO-239 connectors. The question is mainly in reference to to portable/mobile operations, as I'll probably just set up a 6m beam for home base station use.

Hey Dan I'm in Phenix city EM-72
I can usually but not always hit the Cheaha Repeater, 147.09
I'm using a ARX-2B Cushcraft omni now and have a 13-B2 but it's not
up in service now.
I usually have my two meter on scan so might hear you if you give
me a call on that one. For those of you who don't know, Mt. Cheaha is
the highest point in the state of Alabama. It's around 2200 feet and
has great coverage around the area from north Alabama to much of
Georgia and south in to Alabama. I have worked stations into Memphis
Tn and over into Arkansas on this one. Mt Cheaha is located just
south of Anniston in North Eastern Ala.
Dan I'll put you in my list on yahoo messenger is you are on there
also.
Jerry / W1NRA

I'm looking to increase the use of 6m FM in the lower Bucks Co / Northeast Philadelphia, PA region. Please contact me for skeds. Rig is VX-5R with stock duck. I can regularly hit the Fairless Hills 6m repeater, but being a closed system I don't get any returns. I was able to make one contact, S9+40, during the January VHF SS. Sometime in the fall, I will be installing a 5/8wave 2m (=1/4wave 6m) dipole in the attic; but will generally be relying on the duckie for FM.

We got a used Alinco DX 70TH last November and worked four continents (NA,SA, EU, and AF) with a vertical wire dipole. Cool!

Now with 6 improving again I need advice on what kind of monoband mobile antenna to get for CW and SSB. Any suggestions? I have a 96 Voyager minivan. The OM has a 98 Ford Ranger extended cab pickup. We have a 3-mag mount for the HF with Ten-Tec and Valor Pro-Am sticks.

MFJ makes a 2/6 Mtr mag base antenna that runs about $28 new (List).
Just sold mine at last Sunday's HamFest in Manassas, VA for $15.

Needed a duplexer to combine the 50 Mhz antenna connection and the 2
Mtr Ant Connection on my 706 which would have cost more than the
antenna did. So went back to HamStiks for eack Band.

Not familiar w/DX70 so don't know how much help this has been for you.

Am thinking of purchasing a PAR 6 meter "loop" type antenna for the
base station. Have heard good reports on the PAR for omni-
directional work. Can't have a beam due to CC&R's.

Bill...have one and like it. Not as good as the Cushcraft beam, but easier to hide! Mine sits in the attic (also have the CCR problem) and does OK, better than the J-Pole. The folks that make it are a bit south of you in the NC mountains....the owner also does EME, so he knows his stuff. For mobile I don't recommend it.....build the 6M halo shown at www.hamuniverse.com/6mloop.html. It is basically a Saturn Halo copy.

Think you'll be happy with PAR if you get one.

Andrew
KG4GSC
(PS..band opening today??? I was checking on a local repeater (which is down), ended up getting into a repeater 160 miles ATCF south in SC. If 2M is open, 6M should be open.)

1046. open Tuesday

I'm willing to try. I am in Hamilton Twp, NJ just north of you. If you
can hit the Fairless Hills repeater, we might be able to set up a sked.

Currently, I am running a FT100D into both vertical and horizontal
dipoles -- both of which need to be raised a bit higher.

I got a spy report that this month's issue of QST VHF has plans for an omni direction, horizontal polarized "egg beater" type antenna. Word on the street is that the plans tell you everything you need to know, and can be built for cheap. The stub required for impedance matching is 75 ohm feedline. If you have access to this publication check it out. You might decide to build the thing, if not you can continue to use whatever you already have.

GO for the Par! I've owned both the 6m and 2m stacked horizontal omni
for
almost a year. It takes about 5-10 minutes to assemble and works quite
well
up to 150 watts. I've worked 28 states and 5 countries (so far) using
the
above combination (see www.parelectronics.com) for specifics and
pictures.

It great that there are band openings for you guys down south but one thing I would like to request that you include with your band opening messages is the Z time when you're reporting the opening.

There's a delay in getting the messages published on the board and sent out to the list and it would be nice to be able to judge how relevant the message is by seeing the Z time and be able to know that it could be "old" news.

Having the time of the openings could also help the rest of us be present at the shack should an opening happen around the same time another day.

Just the view from my knothole.

KG4OHE-Bill FM18hx (Reston, VA)

PS, Thanks for all the endorsements of the PAR antenna. I've used their triple cavity notch filter on my two meter mobile station to kill the intermod interference and it has worked superbly. A little pricey ($83) but it works!

Well, thanks for the help.

As I write this I'm on w/my Saturday morning 6-meter AM group, which consists this particular morning of: WA4DDH, KA1OXQ, N1ELC and a guy over in Fitzwilliam, NH, whom I cannot hear because. This is always a great bunch of guys, all using boat-anchors: 'ELC uses a Gonset G-50, 'OXQ is on w/his Poly-Comm 6, W1MAS (just joined us) also uses a G-50, 'DDH is in w/his Clegg "Thor-6" and Paul, call-sign unknown, has a Lafayette HE-45. I am on w/my plate-modulated "Seneca" & Eico modulator-driver.

Since it's a cool morning here in NH (38 degrees) the tubes (valves?) help heat up the room (Hi!).

73s all....it's nice to be back.

Tune around and listen for K3YTL in Northeastern Pa running 6 at appx
50.150--2, 220 and 440 too!

Their contest station is 40 air miles from me---I'm running a dipole and
their 40 over S9!!!

1071. My first contest.. YIPEE!

Yahoo group: 6meter (2000 — 2003)
Date: 2002-06-10 03:35:15 UTC
From: tom_zinck2
Topic: 1071 Message: 1071

Well, I just finished my first Amateur Radio contest ! it was the ARRL VHF QSO contest.

Details:

http://www.arrl.org/contests/rules/2002/june-vhf.html

I worked the contest a total of about 6 hours over the weekend. I was able to make 5 70cm contacts, 9 2Meter contacts, and 12 6Meter contacts.

On 6Meters I was able, due to a GREAT E's opening this afternoon that lasted about 1 hour, to work some real distance... grids EL98 (Florida) EM32, EM60, EM74 (Arkansaw and Georgia) and EN03, EN13, EN32 (South Dakota and Minnisota).

So, my total points were 527.. this sounded good until I realized that the winner last year had over 319 THOUSAND points:

http://www.arrl.org/contests/results/2001/June2001.pdf

Oh well, better next luck next year.

;-)

For this contest I used my Ranger RCI5054x 6meter rig (25 watts) and my HTX-212 2M rig at 45 watts.. both using a Diamond V2000 tri-bander antenna. My 70cm contacts were made with a VX-5 handi-talky and a Jpole antenna made from 300 ohm tv lead.

Notable contacts were my first 2M contact, which was in FN12... which is about 300 Kms away.. pretty good for FM simplex !!!.. must have been some Tropo at play ! Another neat contact was on 70cm.. I started CQing on a 2M simplex freq, and a local ham who was scanning heard my call and replied.. after that QSO we switched to 446.000 for the extra points..while there a ham from Carleton Place on a handi-talky over heard us and call me... 15 miles away HT to HT.. very cool.

Well, I hope that i can improve my score for next year... but score aside this was a great contest and made me appreciate the power of simplex communications. I use repeater every day for most of my contacts, so it was nice to use Simplex for a change.

What fun !

Next context will be field day in two weekends ! Yipee!

Well, I will not have my SWR meter for a day or so... the instructions for the V2000 say it is for 52-54, but I was able to extend the 6meter counter-poise out a bit... I figure it is now perfect for 51, so my SWR for 50.125 must be pretty high.... I will report once I have the meter...

If it is of any interest, I just put up (2 weeks ago) a Cushcraft Tri-Band beam. 3 elements on 6, 5 on 2 and 5 on 70CM. I tuned it for mid-band (52) and just measured the SWR at 50.125. It is about 1.4:1 at the lower freq. At resonance the SWR is close to 1:1.

73,

Mike

1078. Almost met goals

Yahoo group: 6meter (2000 — 2003)
Date: 2002-06-10 20:17:17 UTC
From: Buzz, KB1EPQ
Topic: 1078 Message: 1078

Hi all...
Almost met my personal goals of 20 QSO's and 100 Points...ended just 1 QSO short of both. I run a very TINY station here in FN34...on 6m I have 10W into a verticale dipole at about 15 feet (gonna make something directional soon) and on 2m I run 24W into small 3 element beam at around 20 feet. My 6m dipole runs only North and South so missed what I guess was a bit of an opening to the West. All in all, I had a good time and now can make a few improvements and set some new goals for September. Thanks to all my contacts and best wishes!

1080. Question about Cushcraft triband

Yahoo group: 6meter (2000 — 2003)
Date: 2002-06-10 21:25:23 UTC
From: jerichatham1@earthlink.net
Topic: 1080 Message: 1080

Mike W6MDK, or anyone else,

I am looking at purchasing a Cushcraft triband beam and would like to know what experiencies you have had with the beam.

I live in the desert and figure 30 to 35 feet will be a limit for me. This will be my first 6 meter equipment so I am going a lot by recommendations here.

Thanks

Bob

Date: 2002-06-10 23:04:27 UTC
From: stephen thompson
Topic: 1080 Message: 1081

I have the Cushcraft 6 / 2/ 70 triband, A627013S, at about 40-45 ft and have had pretty good results with it. The 2 / 70 portions are vertical so I am cross polarized on those bands on ssb but it still porforms pretty nicely. The swrs are steady at almost 1:1 on both 2 and 70 and on 6 I sometimes have to use a tuner but generally stays at < 1.5.

1083. Re: Question about Cushcraft triband

Yahoo group: 6meter (2000 — 2003)
Date: 2002-06-11 03:01:28 UTC
From: w1nra
Topic: 1080 Message: 1083

Bob I'd like to suggest the 6 meter vertical ringo from cushcraft.
These are great antennas and the verticals work great for DX. I use
an A 99 on 6meters with a tuner and have had some good results. I'm
sure a strictly 6meter ant (vert) would do even better. I did work
Cuba with my A 99.
Check the Cushcraft vert. I'm sure you would be pleased with the
results.
Otherwise I worked 38 states with a long wire and tuner for 6 meters.
MFJ 949e tuner and about 70 feet of wire up only 8 feet at highest
point.

Good luck
Jerry / W1NRA

Topic: 1080 Message: 1084

I also have the Cushcraft triband beam (6m, 2m, 70cm) it is the best beam I've ever had up. What I like most is the one mast one rotor idea. I have mine on a 30ft push-up mast with a radio shack tv rotor turning it. Going on 2 years and still works great. Now the problem is the 6 meter beam part is very narrow banded. You will need a vertical for 6m FM I love the Diamond DPGH62. In my opinion it is the very best 6m vertical on the market.

73 and good DXing,

Jamie R. Dean

Subject: Re: [6 Meter Sked] Question about Cushcraft triband

I have the Cushcraft 6 / 2/ 70 triband, A627013S, at about 40-45 ft and have had pretty good results with it. The 2 / 70 portions are vertical so I am cross polarized on those bands on ssb but it still porforms pretty nicely. The swrs are steady at almost 1:1 on both 2 and 70 and on 6 I sometimes have to use a tuner but generally stays at < 1.5.

jerichatham1@... wrote: Mike W6MDK, or anyone else,

I am looking at purchasing a Cushcraft triband beam and would like to know what experiencies you have had with the beam.

I live in the desert and figure 30 to 35 feet will be a limit for me. This will be my first 6 meter equipment so I am going a lot by recommendations here.

Thanks

Mike, is that the A627013S ? How do you like it?
Anything to compare it to? Looks like an interesting
antenna.

At 1500Z, Europe still being spotted on the east coast via multiple-hop sporadic-E. There is also some short skip being reported in New England, indicating some very intense E clouds there.

East coast stations are starting to spot beacons from the west, indicating that E clouds are starting to form over the middle US.

Still rockin' at 1700Z. Spots are coming in from both coasts and everywhere in between. Rare grids being reported. A JT was reported on 50.265, so tune across a wide range to be sure you don't miss anything.

As of 1930Z, many spotters are reporting very loud signals on 6. It should be possible for modest stations with simple antennas to make contacts if you are in range of this opening, and it appears that most parts of the country are.

Three men are sittin' on a bench. One's a Texan wearing a Stetson, one's a Muslim wearing a turban, and the last an Apache with an eagle feather woven into his hair.

The Indian is rather glum and says "Once my people were many, but now we are few."

The Muslim puffs up and says "Once my people were few, but now we are many millions."

The Texan adjusts his hat, finishes rolling a smoke, leans back in his chair and drawls, "that's cause we ain't played Cowboys and Muslims yet."

Romans 10:9-10 (NIV) That if you confess with your mouth,
"Jesus is Lord", and believe in your heart that God raised
him from the dead, you will be saved. For it is with your
heart that you believe and are justified, and it is with
your mouth that you confess and are saved.

Still rockin' at 1700Z. Spots are coming in from both coasts and
everywhere in between. Rare grids being reported. A JT was reported on
50.265, so tune across a wide range to be sure you don't miss
anything.

Love it when the band opens. Took the new MFJ 9406 for a ride (490 miles and 8 customers yesterday... whats that old wag about "rode hard and put up wet??). Used a quarter wave 6M mag mount....stopped for a soda....snapped the rig on...worked AA6TT in Vermont from NC mountains. 5/9 report, he was surprised that I was running QRP. Neat little rig if you can handle no bells & whistles. Look for one used, MFJ charges a chunk for it new.

Now, if we can just keep 6 open longer....!

Had to share the saga. Been a ham since 89 but very inactive until I got the bug about a month ago, upgraded to General and started gearing up for a 1C in the mountains of North Carolina for Field Day. Bought a new FT-100d and played around a bit mobile on HF, but 6 is where I want to play. So, decided to build a dipole. Not like me to follow anyone else's plans, so I had to do this all the hard way. After much thought and scrounging, I've built a dipole from an old balun from a 10m dipole and 4 wire clothes hangers straighted and mangled together. After much flakeyness, I get the SWR perfect. Of course, it looks terrible, and the hangers aren't nearly as rigid as I expected, so they end up drooping down a great deal.

My plan is to take stuff to hang it if I'm near trees, but I have no idea where I'm heading in the mountains for FD, so I had this plan to get it up 15ft with PVC pipe sticking up near the car somehow. OK, maybe "plan" isn't the word to use. A couple of trips to Lowes and Home Depot and I'm ready to try it. I have 3 5ft sections of PVC, the couplers to stick them together, and ready to try it. Before I get near the car, I put the 3 sections together and stick it up in the air to see that while it is pretty wobbly, it will probably be OK. Take it all apart and head to the car. I can wedge 1 5ft section of PVC between the back seat and the door, where the PVC sticks up straight out of the window. I get the other two sections on and the antenna on, move it all up, and my ugly dipole is 15ft in the air. It wobbles some, but unless a big breeze comes up, it is going to be fine. This is 3/4 inch PVC after all. Get ready to go test the SWR and realize I've forgotton one very important component.....
Coax. Not doing much talking without that. Bring it down, put on the coax and try to start raising it. Very quickly I realize that coax is pretty heavy. I get it to 15 ft and it is all over the place. Wish I had video of me trying to balance it all because it had to be funny. So much for 15ft.

I back it down by 5ft and it is stable enough to survive I think, and go check the SWR. Near perfect. Tune around not expecting to hear a think of course since the band is habitually dead when I check it and there is a signal. Faint but it is voice. I wait and it gets stronger. I spin the dipole and it gets stronger. He wraps up the contact and calls QRZ. I answer....
I'm so excited I've already forgotten his call, but my first 6m contact in my life is on my homebrew, coat hanger, floppy dipole from NC to NY. Got to love 6.

Ken, I'm just west of you near Kernersville. 6M, when open, is a blast. Have an XYL problem this weekend, so will be on only sporadically (how appropo) this weekend. Should be lots of contacts available w/Field Day. I'll have my big MJF rig loaded up and hot (10 watts)! My mast is not quite as good as yours (10 ft. extensible rod for window washers) and the dipole consists of 2 Rat Shack 54" whips in an old TV antenna mount. Wish I could be up on the mountain property this weekend....oh, well.

Hope to work you this weekend!

This is HUGE news here in rainy South Florida - I thought I would share it with the rest of the nation. It is an uplifting story about a certain individual known on 11 meters as "Rabbit Ears" who might be spending the next few years in the State Hotel.

The photo taken of "Rabbit Ears" in chains was made by a reporter / ham K4NBC (guess which major network he works for - Hint it is not CBS).

http://www.arrl.org/news/stories/2002/06/20/1/?nc=1

Score one for the good guys.

-- James KF4OUI/AE (I upgraded last Friday....No code tech to extra in one step!! When 6 meters is not open I can do my thing on 20 meters now!!!)

1124. Field Day in South Florida

Yahoo group: 6meter (2000 — 2003)
Date: 2002-06-21 03:05:19 UTC
From: James Carlin
Topic: 1124 Message: 1124

As you all know, this weekend is Field Day. I will be with a group of hams who are going to set up in an abandoned building in the everglades that was once used as a VOR site. For those of you who do not know what VOR is, it is a method of aircraft navigation.

The site was in a serious state of disrepair, there was a lot of trash in the main room of the building and a family of barn owls has taken up residence in the roof. The owls left a pile of owl poop and animal carcasses in the back of the room, the carpet was stinking of mold from the 10 years of neglect. A work party of 4 guys went there Sunday and cleaned the place out. We used a rake and shovels to move the garbage from the main room to the generator room. The carpet was laid down like tiles, and was not glued to the floor - it came up easy with a flat nose shovel. The trash that did not produce a thick, black, toxic smoke was burned - the rest was moved to the generator room (the generator room is separate from the equipment room, so we will not have to smell anything foul and nasty).

There is still some work that needs to be done, this will be taken care of Friday. Once all the trash and old carpet is removed, the room will be swept and then I will spray the entire area with a bleach and water solution. This will KILL any remaining mold and fungus.

The VOR site is ideal for field day because there is still a 30 foot mast in place - perfect for mounting antennas. There is also a large roof area that has poles all around it - more places to mount antennas. Also if it rains (and it probably will - we are in south Florida) we will not get wet. If there is a lightning storm we can disconnect the radios from the feedline and be perfectly safe.

We WILL activate a 6 meter station. The 6 meter gear will consist of my Icom 706 MKIIG and a military antenna that works from 30 - 75 mhz. This antenna is directional. If the band is open, listen for us! We will be in grid EL95 using my callsign KF4OUI. Maximum power output shall be 100 watts.

On HF we will be using my newly upgraded callsign KF4OUI/AE. We plan to operate on all bands from 10 - 160 meters. Most contacts will be on sideband but I am bringing my telegraph key to attempt some CW.

If you hear me, be sure to call. Not that I'll remember the call. I'm having all kinds of trouble remembering calls these days. I'm 37 with a 60 year old brain I think.
Not sure yet where I'll go, but I kind of remember an area off of 77 on highway 21, going up to sparta, NC where about 2/3 up the mountain there is an overlook that you feel like you can see the entire piedmont. You are really high, it is really steep down, and then completely flat from there to the beach. If I manage to get there, I might have a shot at working you.

Dear Member,

Radio Modifications is a group dedicated to the repair maintenance and modification of radio related equipment. I found this group, which is extremely helpful for ham radio operators who need information about their equipment. Whether you are a novice or experienced, this group will benefit all aspects of ham radio.

If you would like to join, please email the following RadioModifications-subscribe@yahoogroups.com or go to the website http://groups.yahoo.com/group/RadioModifications

From: haesem@uwplatt.edu
Topic: 1129 Message: 1129

Jamie and the group,

My last digest had two messages, only vaguely related to 6 meters. One was about general info on Cushcraft R7/7000 antennas, a link that has been published here very recently. The other was about joining the Radio Modifications list. Neither message included a ham call and the first didn't even sign his name. Isn't this considered spamming? (It's also nice to sign with your grid locator and and also the state, for those of us who are grid-location challenged.)

We have been monitoring 50.120 for the past week, looking for the FP 6 meter-only operation at GN17tc. Has anyone of this list worked them?

Haven't heard a whisper here but a check of DX Summit show they're working LOTS of Europeans. For those of you not familiar with the prefix FP, it is for St. Pierre and Miquelon. That's a small group of French island just of the southwest coast of Newfoundland, Canada and should be very workable for many of us if conditions are right.

There will be another group on FP for the IOTA contest, and we'll be there (the same motel room as the fellows active now, actually) for the sideband North American QSO Party the middle of August. We'll be 100 watts to a dipole, not high power with a beam like the present operation :-).

1133. 75 ohm coax with 50 ohm antenna on 6 m.

Yahoo group: 6meter (2000 — 2003)
Date: 2002-06-25 14:43:56 UTC
From: Carl Demmin
Topic: 1133 Message: 1133

I recently built a 6m j-pole antenna and I would like to mount it on a pipe that had a c-band satellite dish on it. I extended the 3" pipe to 18 ft and made 2 mounts 8 ft apart. This pipe is mounted in a yard of cement and the pipe is filled with cement to 12 ft. I would like to use the coax cable that was used for the satellite system. The satellite cable has 2-75 ohm coax cables and a number of control wires. It drives me nuts that it is just sitting there without something attached. The problem is the impedance of the coax. Is there a balun that I can use to match both ends back to 50 ohms? This project would be great for a remote control project by putting the transceiver at the antenna location any ideas on which radio would work good for remote control?

Carl,

The Kenwood TS-B2000 (the "silver box" version) is designed for remote/PC control. Aside from providing weather protection, temperature control and power to a remotely located rig there are also the the issues of control and getting TX/RX audio to and from the shack. You might want to consider placing an inexpensive barebones PC (without monitor) alongside the remote rig and connecting it via ethernet to your shack computer - or to your house LAN if you have one. This enables you to exercise control over the remote PC from inside the house and you can use SpeakFreely or RealAudio to ship audio in both directions. You won't have any of the Internet-style delays on your audio since it will sent at 10Mbps and will never be leaving the LAN.

73,
Abe Schachter N3BBF
Potomac MD

ZCZC AG38
QST de W1AW
ARRL Bulletin 38 ARLB038
From ARRL Headquarters
Newington CT June 24, 2002
To all radio amateurs

SB QST ARL ARLB038
ARLB038 General Communications Emergency Declaration

On June 24, 2002, under the authority of Section 97.401 of the
Federal Communications Commission's Rules and Regulations [47 C.F.R.
Part 97] a General Communications Emergency is declared to exist in
Arizona requiring the protection of amateur emergency communication
frequencies.

Amateurs are required to refrain from using 7265 kHz (daytime), and
3990 kHz (night time) plus or minus 3 kHz unless they are taking
part in the handling of emergency traffic. This order is effective
immediately until rescinded but may be as long as 14 days.

Arlan K Van Doorn, Senior Advisor for Public Safety Enforcement
Bureau, Federal Communications Commission, Washington, DC.

W1AW will discontinue its 3990 kHz phone bulletin, transmitted daily
at 0145z, until the declaration is rescinded.

YOU FOLKS HELP ME OUT HERE. I MAY PUT ANOTHER BEACON ON SIX METERS.

DO ANY OF YOU CHECK THE BEACONS ON SIX METERS FOR OPENINGS? I ALREADY HAVE A BEACON ON TEN METERS AND AM GETTING SOME GREAT SIGNAL REPORTS BUT I HAVE EVERYTHING NEEDED TO PUT ONE ON SIX ALSO BUT JUST WONDERED IF ANYONE ACTUALLY WOULD LISTEN FOR IT. THE BEACONS ARE A GREAT SOURCE OF INFO TO LET YOU KNOW WHERE THE OPENINGS ARE AND MOST OF THEM ARE 5 WATTS OR LESS.
IF YOU DON'T NOW LISTEN FOR THEM, TRY IT FOR A WHILE AND YOU WILL FIND IT EASY TO KNOW WHERE YOU MIGHT GET A FEW MORE GRID SQUARES IF THAT'S WHAT YOU CHASE HI HI.

THE BEACONS ON SIX METERS SHOULD BE BELOW 50.125 AND PROBABLY BELOW 50.1
THERE IS A BEACON LIST FOR 50 MHZ AT THE FOLLOWING ADDRESS:

http://www.keele.ac.uk/depts/por/50.htm

Check out the beacons and you may save yourself some unneeded calling.

My ten meter beacon is at 28.240
5 watts into A99 antenna up 20 feet.
My qth is Phenix City, Alabama
Grid EM72LL

AS I SAID I HAVE EVERYTHING TO PUT A BEACON ON SIX IF I SEE WHERE ANYBODY WOULD BE LISTENING FOR IT.

This is my group for ten meter beacons, check it out. info also applies for beacons on other freqs.

From: Schachter, Abe
Topic: 1140 Message: 1140

For US amateurs, the FCC rules in Part 97.203(d) state:

"(d) A beacon may be automatically controlled while it is transmitting on the 28.20-28.30 MHz, 50.06-50.08 MHz, 144.275-144.300 MHz, 222.05-222.06 MHz, or 432.300-432.400 MHz segments, or on the 33 cm and shorter wavelength bands."

If you are planning a full time, automatically controlled, beacon I would suggest taking a second look at where you intend to place it. It is not just a matter of being "below 50.125 and probably below 50.1"

Below 50.1. Actually below 50.080 is probably a better choice. Check with ARRL for the bandplan I would guess. K4TQR has a solar powered beacon on 50.060 I think from Bham area. I check it from time to time to confirm equipment operation. I would use your beacon if I can hear it groundwave.

In the US it is not just a matter of the ARRL recommended bandplan - it is written into law in Part 97.203(d). An American six meter beacon can only operate in the range of 50.060 - 50.080 MHz.

Personally, I do check the beacons on a semi-regular basis but as a general rule can only hear the W3VD beacon in Laurel MD on a daily basis as it is just 25 miles away.

1147. Re: [6 Meter Sked] sched in CA?

Yahoo group: 6meter (2000 — 2003)
Date: 2002-06-27 03:17:17 UTC
From: W6MDK@AOL.COM
Topic: 1147 Message: 1147

Dear Rich,

I don't know of any major (or minor, for that matter) six meter activity here in So Cal, but I would certainly be open to starting some. I made my first six meter contact back around 1964, but I lived in NY, and six meters interfered horribly with channel 2, so I had to stay pretty well away from it. I have always been fascinated with the possibilites for this band, and it remains one of my favorites.

If you'd like to schedule a QSO, I occasionally get on six in the evening with a friend of mine in Burbank, W2WJ/6. We'd love to have you join in. If we get active enough, we might even get others to join in and really create a net.

Send me and E-mail directly (W6MDK@...) and we can set up a sked.

73,

Mike
W6MDK

1148. RE: [6 Meter Sked] sched in CA?

Yahoo group: 6meter (2000 — 2003)
Date: 2002-06-27 04:59:48 UTC
From: Joe Acevedo
Topic: 1145 Message: 1148

Friday, 8:00 PM, The San Diego Six Shooters Club holds an open net (currently) on 52.525 MHz FM simplex. Net control is Joe N6SIX, and after the net the weekly ARRL News feed is broadcast on 52.040 MHz. The group is actively seeking a location and planning construction of an OPEN repeater for their area and needs.

Sunday, 9:30 AM, The California Award Hunters 6 Meter net is held on 50.175 MHz upper sideband, with Frank KA6BUY of Long Beach as net control. This net is held in conjuntion with (and following) a long-standing 9:00 AM net held by this group over 146.520 MHz.

Sunday, 10:00 AM, The Southern California Six Meter Club holds its AM Roundtable Net, conducted by Will Anderson AA6DD of Riverside. It is held on 50.400 MHz, amplitude modulation.

Tuesday, 8:00 PM, The Southern California Six Meter Club holds its SSB Net, conducted on 50.150 MHz., and is generally hosted by Will Anderson as well.

Tuesday, 9:00 PM, The San Diego Six Shooters USB Net takes place on 50.200 MHz. EXCEPTION is every third Tuesday, at which time they hold a monthly meeting. Meetings are currently held at the Top Sirloin Restaurant in El Cajon.

Thursday, 7:30 PM, The Southern California Six Meter Club holds its FM Repeater Net over the 'CARS' network. It is hosted usually by Dan O'Connor N6BKL. The net is conducted over the following linked repeaters: Frazier Mtn repeater (52.56 MHz -offset), the (Malibu) Buzzards Roost repeater (51.94 MHz -offset), Barstow repeater (52.68 MHz -offset), and the Lompoc repeater (52.94 MHz -offset). These repeaters require an access tone of 82.5 Hz.

VERTICAL POLARIZATION is the norm for the above listed nets, and all are open nets. Please keep me informed of any other nets for 6 Meters in the Southwest or Pacific regions, as well as any updates or corrections to be made.

The growing widespread use of 50.300 FM has recently produced many interesting and unexpected DX contacts throughout North America. It is ideal for those operators whose antennae favor the low 'DX' end of the band. Be sure to include it in any memory and scan groups wherever applicable.

Hope this helps!

73 de N6SIX
Joe

1166. Why Call CQ?

Yahoo group: 6meter (2000 — 2003)
Date: 2002-07-06 05:54:33 UTC
From: Joe Acevedo
Topic: 1166 Message: 1166

Greetings,

While surfing the internet, I came across an interesting article that I would like to share with all of you. Please click on the following link (or copy and paste into the address bar of your browser) and read the article. I enjoyed it, and hope you do as well.

http://www.cebik.com/cq.html

Just a reminder about San Diego SIx Shooter Sideband Sunday. Many of us monitor 50.150MHz USB at different times of the day. Come on out and say hello.... you never know who might be out there!

21 check-ins for last night's Six Shooter Amateur Radio Net on 52.525MHz simplex and still going strong!! If you haven't been on the net in a while, drop in next Friday evening at 8:00pm PST on 52.525MHz FM simplex. Remember, immediately following the net, we QSY to 52.040MHz FM simplex for the playing of the ARRL Audio News....haven't missed a broadcast since the inception of our net a little over a year ag0, and this remains a very popular segment!

That's all for now. Wishing everyone a safe and enjoyable weekend!

Hope to hear you on SIX!

I know there has to be alot of people listening for someone to call CQ. I've noticed in times of band openings that the freq of 50.125 will sounds just as dead as can be, but you let the first DX station call CQ and it's pile-up city. I believe that is is very important that we call CQ. I feel that as we listen to a freq even if it is quiet, that ever so often we should call CQ if nothing else but to let people know someone is there. 73 and Good DXing, ---------- Jamie R. Topic: 1167 Message: 1173

I agree. The first band opening I worked on 6 meters was because I called CQ. The background story is I had just received my Icom 706 MKIIG and built a copper pipe j-pole. The time was about 9:30 PM EST and I tuned into 52.525 mhz. The frequency was dead quiet - but just for the heck of it I gave out a call, not expecting anything to come of it. As soon as I let off the key, I made 4 or 5 contacts in several states. Not exactly exotic DX, but still very cool for someone who had never worked any frequency below 144 mhz before.

Why call CQ? I think the REAL question is why not call CQ? If all you want to do is listen, why bother to get a ham license? Just buy a scanner.

That said I will now admit to not trying 6 meters very much any more. I upgraded my license, so now I can call CQ on 20 meters :)

-- James KF4OUI

I know there has to be alot of people listening for someone to call CQ. I've noticed in times of band openings that the freq of 50.125 will sounds just as dead as can be, but you let the first DX station call CQ and it's pile-up city. Good idea of course. Also after you call CQ and make a contact MOVE OFF THE CALL FREQUENCY. Dan/W4NTI ----- Original Message ----- From: "Jamie R. Dean" To: <6meter@yahoogroups.com> Sent: Monday, July 08, 2002 1:40 PM Subject: Re: [6 Meter Sked] Why Call CQ? > I know there has to be alot of people listening for someone to call CQ. I've noticed in times of band openings that the freq of 50.125 will sounds just as dead as can be, but you let the first DX station call CQ and it's pile-up city. I believe that is is very important that we call CQ. I feel that as we listen to a freq even if it is quiet, that ever so often we should call CQ if nothing else but to let people know someone is there. > > 73 and Good DXing, > ---------- > Jamie R. 1175. Congratulations Jamie

Yahoo group: 6meter (2000 — 2003)
Date: 2002-07-08 21:50:55 UTC
From: Dan/W4NTI
Topic: 1175 Message: 1175

Congrats to Jamie for passing the General written. Work on the CW no more than an hour a day. Or less even. Take it one step at a time. Learn it and THEN USE IT.

Dan/W4NTI

I am in the same boat, have passed the general test and now must learn code.
What is the best method?

From: James Carlin
Topic: 1176 Message: 1177

Good going Jamie! I took my general and extra written exams on the same day the 4th Sunday in May. One the second Friday in June I passed element 1 - just in time for Field Day! Just like Dan said, study the code for no more than 1 hour a day. The program I used (code quick) was broken up into three 20 minute sessions per day. Each session introduced 4 characters. If you follow the program daily, you can pass your 5 WPM in about 2 - 3 weeks. At first it might seem like a lot to get through, but the closer you get to learning the alphabet and numbers the more excited you become about taking the test. By the time test day cam around for me, I was confident I would pass.

The website for code quick is www.cq2k.com. By no means am I suggesting this is the only method, or the best method, to learn code - Im just saying it worked for me. This method teaches "sound alike" as opposed to dots and dashes.

Soon you will have the callsign KE4HTM/AG!! See you on 20 meters!!

-- James KF4OUI (I choose to not change my callsign).

Congrats to Jamie for passing the General written. Work on the CW no more than an hour a day. Or less even. Take it one step at a time. Learn it and THEN USE IT.

Congrats to you Bill...

What is the 'best' way is a good question. What works for one may or may not work for you. At this particular point I would say the ARRL method would be the best.

Why do I say that? Because I believe in the Farnsworth method. That is characters sent at a faster rate and spaced to make it sound more natural. And just reduce the spacing to increase the speed. That way you don't get confused and learn the 'sound' wrong.

I didn't know it at the time, but in 1960 that is how I learned Morse.

Above all learn it with the intention of using it. NO ONE is born knowing the Morse code. But their are born CW operators. Some of us have it and some don't. But ANYONE CAN DO 5WPM.

If you run into any problems feel free to e-mail me at
w4nti@...

1181. Re: [6 Meter Sked] Congratulations Jamie

Yahoo group: 6meter (2000 — 2003)
Date: 2002-07-08 22:33:10 UTC
From: James Carlin
Topic: 1176 Message: 1181

All the methods I have heard use the farnsworth method. It is actually very hard to copy at 5 WPM if the characters are sent that slow. However, if you send the characters at a faster rate and space them out to 5 WPM it becomes very easy.

Other than using the farnsworth method, I do not think there is a "best way" to learn. Some people used the Gordon West Radio Shack tapes, some people use the W5YI tapes, some use computer programs, some use ARRL materials, I used Code Quick.

I say pick a method and try it out. If I had to pick a "best" method I would say "any method you can borrow for free". If one method does not work for you, try another! Once you find something you like stick with it. The end result is all the same no matter if you use a computer program or old cassette tapes.

PS - on QRZ.COM there is an article about a 100% FREE morse code program. The program is available for download right now, and like I said it is free and 100% functional. This program starts you out with 2 letters, then adds one character at a time. You set the pace, the program does not add additional characters until you tell it you are ready.

- James KF4OUI
Why do I say that? Because I believe in the Farnsworth method. That is
characters sent at a faster rate and spaced to make it sound more natural.
And just reduce the spacing to increase the speed. That way you don't get
confused and learn the 'sound' wrong.

Hi all,

However you do it. Do it!!! Its worth it! I must say that to fully enjoy
all aspects of Weak Signal VHF/UHF
you will eventually use CW.
.
EME is almost exclusively done with CW. There are new Digital modes which
may change this.
Many of my DXCC countries were done because of CW. Mind you, CW is in no
way my favorite
mode, but if its that or not make the contact, I use CW.

73,
Ken AB5A

1184. Re: [6 Meter Sked] Congratulations Jamie

Yahoo group: 6meter (2000 — 2003)
Date: 2002-07-08 23:36:24 UTC
From: Jamie R. Dean
Topic: 1176 Message: 1184

Bill,
Congrads on you passing the test too. I too am looking for the best code study method. I hear Code-Quick is one of the best, but it is very expensive around $70 for the full package. Maybe I'll be able to find it used.

Good luck. 73 and Good DXing,

Jamie R. Dean

Seems Dan let the word slip about my general test. I would really like to thank each of you for your well wishes. I keep hearing about Code-Quick so I am gonna try it I think. I hope in the next few months to be on 20 meters doing PSK 31 and SSTV. I monitor these modes already and I can't wait to be able to transmit.

BTW has anyone heard any activity on 6m SSB lately?? I've been listening and it's been quiet hear. Well maybe it will pick up.

Thanks again everyone. 73 and Good DXing,

Jamie R. Dean

1187. Weak Signal Digital modes

Yahoo group: 6meter (2000 — 2003)
Date: 2002-07-09 00:51:55 UTC
From: Ken P. Eckel Jr.
Topic: 1176 Message: 1187

Dan,

I understand your position. Let me opine a bit. I have never been able
to hear with my ears a signal on 6M. The cutoff for my hearing is about
20Khz. I have always used transducers to communicate on frequencies
above 20Khz. I also operate RTTY on HF. It is one of my favorite modes.
I can hear the tones coming out of the transducer but I cannot copy them
by
my ear. I am forced to use some sort of CODEC to produce the copy.
Sum both of these ideas and you have a QSO that is the result
of using a transducer whose output is copied thru a CODEC, even though
the tones coming out of the transducer are inaudible. Not that
much of a stretch.

I'd like to hear your ideas on the topic,

Ken AB5A

1188. Re: [6 Meter Sked] Thanks Everyone!!

Yahoo group: 6meter (2000 — 2003)
Date: 2002-07-09 01:01:58 UTC
From: n4km@aol.com
Topic: 1188 Message: 1188

Hey guys,
Congrats to all on passing the tests. Best of luck on the CW part of the exams. By the way, don't approach cw like it is a bad thing. It is really a lot of fun and is a great mode. I operate atleast 75% on cw. Especially on the HF bands. You never know, you might just like it. Once you learn the code, the best way to increase your speed is to get on the air. Having to copy that guy on the other end to figure out what he is saying will increase your speed faster than copying any tape computer program or W1AW. I have been operating CW for about 25 years and it is still one of the best modes going.
Have fun guys!!!
73,
Kevin N4KM

I have been listening to 50.157 all week, with no luck on the CY9. Heard a blurp a couple days back from 0 land. But not much at all going on.

Dan/W4NTI/Alabama

1190. Re: [6 Meter Sked] Weak Signal Digital modes

Yahoo group: 6meter (2000 — 2003)
Date: 2002-07-09 01:17:16 UTC
From: Dan/W4NTI
Topic: 1190 Message: 1190

I have no problem with someone that needs a device like you discussed. I don't want to see anyone with such restrictions be limited in Amateur Radio. You would simply need to put your 'scores' in the correct columb. Thats all I'm talking about.

Similar to contesting...where packet spotting is or isnt allowed for a specific catagory of the competition. If you used packet spotting you would be in the 'assisted' catagory. If not you would be single op.

Tell you (all) what! Since I don't do USB on 6-M, I'll start calling CQ on
AM at 50.4 w/the beam headed SW! I'm calling CQ....

Dang....gotta get an 8.4 mc crystal for the Gonset. Wonder what the Mirage
amp would do if I tried using it for AM? <<grin>> (smoke and loud sounds??)

Cheers!

Thanks for all the suggestions on code. I hope to take my test at the
Huntsville hamfest in august so I think I will try quick code.

I made 2 good contacts this morning on 50.125 USB. One was to the coast of
NC at Elizabeth City the other was into New Hampshire. As I was going to bed
I heard Canada start coming in, but I was too tired to work it.

1212. 6 Meter Sked DX Group Member Information for July 12, 2002

Yahoo group: 6meter (2000 — 2003)
Date: 2002-07-12 17:26:24 UTC
From: Jamie R. Dean
Topic: 1212 Message: 1212

I'm proud to say this since this group started on Nov. 25, 2001 we have gained 321 members. In the past 3 months new membership has dropped off quite abit. So please tell your friends, clubs, and nets about this group. I'd like to that all of you for being here and posting msgs and taking an active part of the group. If the group has no msgs then people have no reason to be here. It is really a joy to me to see the activity of this group.
Don't forget, besides talking about general 6 meter things like band opening and operating practices, you can also use this group to list items involving 6 meters for sale or items you need.

73 and Thanks again for being here,

Jamie R. Dean

1213. 6 Mtr FM Receiver Kit

Yahoo group: 6meter (2000 — 2003)
Date: 2002-07-12 18:07:29 UTC
From: newwf1l
Topic: 1213 Message: 1213

Hi Group,

Just finished assembling my Ramsey FM-6 battery operated 6 meter FM receiver kit.

Much to my surprise and delight, it worked the first time (shock, shock!)

My purpose in buying it was to enable me to to watch/monitor for band openings while I'm in the shack so I can jump over to 6 with the main rig.

The kit is FM only (too bad not cw/ssb too but you have to keep the price down) but it's only 35 bucks plus another 15 for the enclosure. It seems to work pretty good but I have to get a small speaker to hook to it's audio output. Tried it out by jury rigging another speaker so I could do the alignmnet (a simple procedure) and it worked fine altho the audio is a little scratchy. May have been a symptom of the temporary speaker connection.

Kit went together easily and except for a parts problem, rectified by a phone call to Ramsey, it looks like it will work as advertised.

Hope to catch you all on the band some day. I'll be listening!

Oh good. I do have some things to offer for sale...

MFJ-9406 6M SSB radio (50.0-50.3) and Pyramid power supply (max 4 amps),
both used only 1 time. No longer need them since upgrading to the Yaesu
FT-847. Radio will sell for $225 + shipping, power supply will be $25 +
shipping, both for $250 + shipping. Prefer money orders, will consider
trades.

Also, an MFJ 8 band vertical (40m - 2m), partially assembled (YL decided that
she didn't want that "big damn thing" in the backyard), will take apart for
shipping. Yours for $250, I'll pay shipping.

Please send a separate e-mail to the address in the signature line.

Thanks

1215. ICE 6M RX preamp/BP filter

Yahoo group: 6meter (2000 — 2003)
Date: 2002-07-13 15:30:36 UTC
From: Tom Cox
Topic: 1215 Message: 1215

Does anyone else have any experience with the Model 140BX 6M preamp/bandpass filter from Industrial Communication Engineers, Ltd.? I've been using one since March, and it really seems to help in front of my IC746. For $76, it's a bargain. I've decided to get one for 2M as well. ICE is a small company, but their customer service is first-rate. I'm never more than one step away from an engineer when I call with questions. I have no business relationship with these guys, other than as a satisfied customer.

They still don't have a Website of their own, but I found a link convering the preamps at:
http://www.arraysolutions.com/Products/icemain111.htm

BTW, they also make good lightning protection gear.

1217. Yaesu Ft620B

Yahoo group: 6meter (2000 — 2003)
Date: 2002-07-16 12:09:14 UTC
From: mrfixitescanaba
Topic: 1217 Message: 1217

I'm looking at buying the Yaesu FT620B. It looks like a nice rig, but the only time I have worked 6 meters, is the last field day. I am asking for input if this is a good radio to start with? It covers SSB, AM and CW. Also, there is no FM, is that something I should wait for in another radio that might come up for sale?

Thanks,
Mark

I have owned several 620's, A and B models. Good radio, fair receiver, but
no
filters for TVI. OK if you live in the country and no TV channel 2 around.
About 8 watts out, but some B models will do more. They are getting a
little long in
the tooth. If you can pick up a clean one for under 200, it is a good
started radio.
There are a lot of nice multi mode radios out there, for a few dollars
more,
built in preamps and FM. I'm using an ICOM 736 I got for $375. Good
Luck..

1221. RE: [6 Meter Sked] Yaesu Ft620B

Yahoo group: 6meter (2000 — 2003)
Date: 2002-07-16 20:51:52 UTC
From: Jeff Kershaw
Topic: 1218 Message: 1221

I have a FT620b now. Just bought it a few months ago to experiment with the band.
We all have either cable or Sat in Monterey, so no TVI troubles so far.
The RX seems fine and 8 watts out is amazing when the band is open.
I paid $100 for it when I got it and took it apart and cleaned all the pots, switches and re-aligned it. For a c-note it was a great buy.

Gold Star Mothers is an organization made up of women whose sons were killed in military combat during service in the United States armed forces. Recently, a delegation of New York State Gold Star Mothers made a trip, to Washington, DC to discuss various concerns with their elected representatives. According to published reports, there was only one politician who refused to meet with these ladies. Can you guess which politician that might be? Was it New York Senator Charles Schumer? Nope, he met with them. Try again. Do you know anyone serving in the Senate who has never showed anything but contempt for our military? Do you happen to know the name of any politician in Washington whose husband once wrote of his loathing for the military? Now you're getting warm! You got it! None other than the Queen herself, Hillary Clinton. She refused repeated requests to meet with the Gold Star Mothers.
Now -- please don't tell me you're surprised. This woman wants to be president of the United States --- and there is a huge percentage of voters who are eager to help her achieve that goal.

Sincerely,
Cdr. Hamilton McWhorter, USN(Ret)

P.S. Please forward this to as many people as you can. We don't want this woman to even think of running for President. May you sleep in peace always...and please...hug or thank a Veteran or active military for that
privilege. Think about this one !!! Don't forget, our girl, Hillary Rodham Clinton,
as a New York Senator, now comes under this fancy Congressional Retirement and Staffing Plan. It's common knowledge that, in order for her to establish NYS residency, they purchased a million+ dollar house in upscale Chappaqua, NY. Makes sense. They are entitled to Secret Service protection for life. Still makes sense. Here is where it becomes interesting. The mortgage payments hover at about $10,000 per month. BUT, an extra residency had to be built within the acreage in order to house the Secret Service agents. The Clinton's now charge the Secret Service $10,000 monthly rent for the use of said Secret Service residence and that rent is just about equal to their mortgage payment, meaning that we, the tax payers, are paying the Clinton's mortgage, their transportation, their safety and security, their 12 man staff, and it's all
perfectly legal.

Now, how many Americans can YOU send this to?!?

house in upscale Chappaqua, NY. Makes sense. They are entitled to Secret

Service protection for life. Still makes sense. Here is where it becomes interesting. The mortgage payments hover at about $10,000 per month. BUT, an extra residency had to be built within the acreage in order to house the Secret Service agents. The Clinton's now charge the Secret Service $10,000 monthly rent for the use of said Secret Service residence and that rent is just about equal to their mortgage payment, meaning that we, the tax payers, are paying the Clinton's mortgage, their transportation, their safety and security, their 12 man staff, and it's all
perfectly legal.

Now, how many Americans can YOU send this to?!?

Yahoo group: 6meter (2000 — 2003)
Date: 2002-07-18 06:56:23 UTC
From: Jamie R. Dean
Topic: 1222 Message: 1224

Folks this msg had nothing to do with 6 meters or amateur radio. Where it is true or not doesn't matter in this case, the fact still remains that it is way off topic for this group. So please from now own lets keep the msgs about 6 meters or amateur radio.

73 and Good DXing,

Jamie R. Dean

Gold Star Mothers is an organization made up of women
whose sons were killed in military combat during service in the
United States armed forces. Recently, a delegation of New York State Gold
Star Mothers made a trip, to Washington, DC to discuss various concerns
with their elected representatives. According to published reports,
there was only one politician who refused to meet with these ladies.
Can you guess which politician that might be? Was it New York
Senator Charles Schumer? Nope, he met with them. Try again. Do you know
anyone serving in the Senate who has never showed anything but contempt
for our military? Do you happen to know the name of any politician in
Washington whose husband once wrote of his loathing for the military?
Now you're getting warm! You got it! None other than the Queen
herself, Hillary Clinton. She refused repeated requests to meet with the
Gold Star Mothers.
Now -- please don't tell me you're surprised. This woman wants to
be president of the United States --- and there is a huge percentage
of voters who are eager to help her achieve that goal.

Sincerely,
Cdr. Hamilton McWhorter, USN(Ret)

P.S. Please forward this to as many people as you can. We don't
want this woman to even think of running for President. May you sleep in
peace always...and please...hug or thank a Veteran or active military
for that
privilege. Think about this one !!! Don't forget, our girl, Hillary
Rodham Clinton,
as a New York Senator, now comes under this fancy Congressional
Retirement and Staffing Plan. It's common knowledge that, in order
for her to establish NYS residency, they purchased a million+ dollar
house in upscale Chappaqua, NY. Makes sense. They are entitled to Secret
Service protection for life. Still makes sense. Here is where it becomes
interesting. The mortgage payments hover at about $10,000 per month. BUT,
an extra residency had to be built within the acreage in order to house
the Secret Service agents. The Clinton's now charge the Secret Service
$10,000 monthly rent for the use of said Secret Service residence
and that rent is just about equal to their mortgage payment, meaning

1226. Re: [6 Meter Sked] [Fwd: Fw: Surprising? Not Really]

Yahoo group: 6meter (2000 — 2003)
Date: 2002-07-18 11:25:19 UTC
From: W6MDK@AOL.COM
Topic: 1222 Message: 1226

In reality, this "game" is reminiscent of the party game "Six Degrees of Kevin Bacon". If we just cut a little slack, there is really only a small number of topics which actually could b considered "off topic." YOu can relate almost any topic to any other topic. Besides, everything that's posted is obviously of some interest to someone, even if just the poster, who has every bit as much right to be interested as the guy who started the thing.

I, personally, find ripping Hillary a bit to be just LIITTLE more interesting that someone in Eastern New Hampshire posting that he heard a signal in the South Bronx. Those posts are fine, and I am sure they are of interest to those living along the skip areas. But that is not what this type of forum is all about.

I will admit, there needs to be a line drawn between what is tastefull and what is not but, short of that demarcation, I think it behooves all of us to cut some slack to everyone who makes a post. That is a matter of dewcency and avoiding public insult. In most cases, which to not personally offend, ff we don't like the post, we have every right to ignore it.

By the way, a few days ago I worked a station at the Kenwood Radio Club on 50.125 SSB. I was mobile on the Harbor Freewway in Downtown LA.

Personally, I think Loud Mouthed, Hippie, Over-The-Edge-Left Wing Hillary Clinton is a far more interesting subject. Jusat to prove I can tie it in to six meters, I found her interfering with Channel two. I guess I'll have to turn her in to the FCC for operating outside her alocated frequency band.

Any other comments about this type of RFI/TVI?

73,

Mike W6MDK

From: Jamie R. Dean
Topic: 1229 Message: 1229

I hate I even have to address this but I need to make a statement on what is appropriate for this group and what is not.

Like in the groups description it shows that this group is about 6 meters and amateur radio. In this I mean any msg about 6 meter activity including band openings, operatoring practices, items for sale/want and general fellowship among six meter operators. What is not allowed is anything that doesn't impact amateur radio, like political talk (unless it's over a bill concerning amateur radio), name calling, trashing someone or their equipment. If I have haven't mentioned it then use you common sense.

If anyone has any problem with something that was posted please bring it to me and DO NOT post it in the group. I am hear to handle any trouble that may arise..

Good question, and an entirely appropriate one. Goose and Gander and all
that. We each have our own personal spritirual beliefs, none of which have
anything to do with amateur radio.

I knew this question would be asked sooner or later.. Ok a short phrase or line in a person's signature file could be accepted since a signature file is attached to each msg and is a person way of identifing theirself. But to make this fair I will place it to the group. DOES THE GROUP FILL THAT A SIGNATURE FILE THAT CONTAINS A PERSONAL STATEMENT THAT COULD BE CONSIDERED POLITICAL OR RELIGIOUS IN NATURE, SHOULD NOT BE ATTACHED TO AN E-MAIL SENT TO THIS GROUP??? Please place your response in a msg to the entire group. I will make my decission based on what I read in the groups mail. Just remember that for some users it will be hard with their e-mail apps to remove the offensive part for this one group and still have it remain for others.

Subject: [6 Meter Sked] Topics Appropriate For This Group

I hate I even have to address this but I need to make a statement on what is appropriate for this group and what is not.

Like in the groups description it shows that this group is about 6 meters and amateur radio. In this I mean any msg about 6 meter activity including band openings, operatoring practices, items for sale/want and general fellowship among six meter operators. What is not allowed is anything that doesn't impact amateur radio, like political talk (unless it's

over a bill concerning amateur radio), name calling, trashing someone or their equipment. If I have haven't mentioned it then use you common sense.

If anyone has any problem with something that was posted please bring it to me and DO NOT post it in the group. I am hear to handle any trouble that may arise..

1234. Re: [6 Meter Sked] Topics Appropriate For This Group

Yahoo group: 6meter (2000 — 2003)
Date: 2002-07-18 20:30:00 UTC
From: WL7M
Topic: 1230 Message: 1234

Seems to me that - if you lay down a rule for participants in the reflector - it doesn't matter if the "comment" is in the "message" section or the signature" section. You can't have it both ways and still comply with the rules set forth by the moderator. Consistency seems to dictate that you either "do" or "do not"...there is little difference in where it is placed. If the moderator "knew this question would be asked sooner or later", then the doubt must have been there even before when the rules for participants was set forth.

Let's get back to 6 meters.

73, Joe WL7M

Subject: Re: [6 Meter Sked] Topics Appropriate For This Group

I knew this question would be asked sooner or later.. Ok a short phrase or line in a person's signature file could be accepted since a signature file is attached to each msg and is a person way of identifing theirself. But to make this fair I will place it to the group. DOES THE GROUP FILL THAT A SIGNATURE FILE THAT CONTAINS A PERSONAL STATEMENT THAT COULD BE CONSIDERED POLITICAL OR RELIGIOUS IN NATURE, SHOULD NOT BE ATTACHED TO AN E-MAIL SENT TO THIS GROUP??? Please place your response in a msg to the entire group. I will make my decission based on what I read in the groups mail. Just remember that for some users it will be hard with their e-mail apps to remove the offensive part for this one group and still have it remain for others.

1238. RE: [6 Meter Sked] Topics Appropriate For This Group

Yahoo group: 6meter (2000 — 2003)
Date: 2002-07-18 21:16:00 UTC
From: M Gollihue
Topic: 1230 Message: 1238

Amen. Who cares what is in someone's signature? Those who may be offended by a signature line don't have to read the messages or belong to the group. People are entitled to their own opinions, that is why there are these groups. As long as the BODY of the message is relatively on-topic, who cares?

It is exactly this kind of nit-picky crap that starts wars. To those who may be offended: Get over yourselves, people, grow up and get on with your lives.

Mike, N8CBJ

1241. Re: [6 Meter Sked] Topics Appropriate For This Group

Yahoo group: 6meter (2000 — 2003)
Date: 2002-07-18 22:11:19 UTC
From: WL7M
Topic: 1230 Message: 1241

OK - I know I started this by questioning the moderator's signature file, but I offer this copy of the welcoming message - which I received WHEN I JOINED the group, and please note the signature file and absence of any commentary" therein:

****
"Hello and Welcome to the 6 Meter Sked DX Group/Mailing List,

"This group was started on Nov. 25,2001 to help amateur radio operators all over the world, facilitate contacts on the "Magic" band, 6 meters (50-54Mhz) So please post msgs about band openings, including information on where, when(time in UTC) and in what mode you are operating.(Since the msgs are relayed almost instantly any report of band openings will normally reach other members in a few minutes) This group is also for discussion of 6 meter related topics such as equipment question and answers, operating practices, 6 meter gear you have for sale/trade, items you are looking to buy and general fellowship among 6 meter operators world wide.

"Enjoy the group and if you have any questions please e-mail me at 6meter-owner@yahoogroups.com

"73 and Good DXing,
Jamie R. Dean KE4HTM - Founder/Moderator

"Quick Note: Email attachments are not permitted
"Only members can post to the group"

****

'Nuff said.

73,
Joe
WL7M

From: WL7M
Topic: 1230 Message: 1242

It isn't a matter of being offended - the moderator has stated "nothing controversial" - then attaches a religious commentary in the same message. It is a matter of consistency. The rule applies or it does not.

1244. Re: [6 Meter Sked] Topics Appropriate For This Group

Yahoo group: 6meter (2000 — 2003)
Date: 2002-07-18 22:55:24 UTC
From: Dan/W4NTI
Topic: 1230 Message: 1244

I think the group should stay on subject. SIX METER stuff. Ham radio stuff
, etc.

I am not offended by your religion. I don't have your particular belief,
but it is a free country and you have the right to believe what you want.

Dan/W4NTI

WL7M <joe@...> wrote: Seems to me that - if you lay down a rule for participants in the reflector
- it doesn't matter if the "comment" is in the "message" section or the signature" section. You can't have it both ways and still comply with the rules set forth by the moderator. Consistency seems to dictate that you either "do" or "do not"...there is little difference in where it is placed. If the moderator "knew this question would be asked sooner or later", then the doubt must have been there even before when the rules for participants was set forth.

Let's get back to 6 meters.

Subject: Re: [6 Meter Sked] Topics Appropriate For This Group

I knew this question would be asked sooner or later.. Ok a short phrase or line in a person's signature file could be accepted since a signature file is attached to each msg and is a person way of identifing theirself. But to make this fair I will place it to the group. DOES THE GROUP FILL THAT A SIGNATURE FILE THAT CONTAINS A PERSONAL STATEMENT THAT COULD BE CONSIDERED POLITICAL OR RELIGIOUS IN NATURE, SHOULD NOT BE ATTACHED TO AN E-MAIL SENT TO THIS GROUP??? Please place your response in a msg to the entire group. I will make my decission based on what I read in the groups mail. Just remember that for some users it will be hard with their e-mail apps to remove the offensive part for this one group and still have it remain for others.

Subject: [6 Meter Sked] Topics Appropriate For This Group

I hate I even have to address this but I need to make a statement on what is
appropriate for this group and what is not.

Like in the groups description it shows that this group is about 6 meters
and amateur radio. In this I mean any msg about 6 meter activity including
band openings, operatoring practices, items for sale/want and general
fellowship among six meter operators. What is not allowed is anything that
doesn't impact amateur radio, like political talk (unless it's over a bill
concerning amateur radio), name calling, trashing someone or their equipment
If I have haven't mentioned it then use you common sense.

If anyone has any problem with something that was posted please bring it to
me and DO NOT post it in the group. I am hear to handle any trouble that may
arise..

Hey everyone,
I don't see a problem with something attached to a persons signature block.
It is just a way to personalize a persons e-mail. If the subject of the
e-mail is pertaining to the subject the reflector is about, I don't see a
problem.
My 2 cents.
73,
Kevin N4KM

Questions to ask...
What makes the difference how long it is?
Does it really take that much longer to get the message?
Does the body of the message get the point across?
Does complaining about a signature file add any more time to your life?
Will removing the signatures from everyones email bring 6 meters back to life?

Do we really need any more messages regarding this subject?
Last count was 19 of the thread RE: [6 Meter Sked] Topics Appropriate For This Group

Remember, the word is TOPICS not SIGNATURES...

What I find offensive is not the content but the length. 22 lines?

I personally dso not have any objection to individuals expressing their spiritual beliefs, if that is what they wish to do. I have always felt it appropriate for one to forward those messages he or she feels would be of value. I am not a Christian, but I do not object to your message.

I feel the same way about other beliefs, including political beliefs, as long as decorum, courtesy and good taste are present.

Should you choose to prevent others from expressing their beleifs, then, yes, I would object to you expressing your own. Short of that, say anything you wish.

Well, I guess I never expected to get dozens of emails about
signiture files on a six-meter group. If I were to vote, it would be
to not have any more worthless votes like this. I'll probably check
back some day and see where things are. Right now I'm off to check
the religeous groups for ham discussions. Take it easy,

Hello All,
Seems to me we're wasting a lot of bandwidth discussing something that makes no difference to the intent of the group. To me, this is like the whole business about prayer in school, the Pledge of Allegience, and "In God We Trust" on our money. It's a complete waste of time and tax money to time up the judicial system with this. Yes, the country was founded by Judeo-Christians -- but they also kept slaves and burned people at the stake. Makes no difference TODAY. Politics, Sexual Preference, and Religeon are supposed to be avoided in Amateur Radio for this very reason. We all have our beliefs, and the right to believe them. I'm in the Air National Guard (prior active duty) and will fight to the death defending these rights (even the many that I don't subscribe to). It stops when someone else tries to impose their beliefs on others. Personally, I'm Agnostic, and this is the first time I've ever expressed that in an Amateur Radio forum of any kind. It makes no difference to me what phrases are on our paper representation of financial resources, or any other references to the Judeo-Christian God in my everyday life. I believe that I'm a valuable contributor to our society as most others are. I'm not an ax murderer, I use my blinker in traffic, and I help people when I can. I do this because it's the right thing to do, not for fear of some punishment after I die. It makes me feel good to contribute positively.

Sorry for going on here, but I guess because of all the odd things making news these days, I felt the need to vent. Jamie, keep your signature or don't. It won't change my participation in the group.

Anyone have any big plans for the VHF contests coming up??? I'll try to be on the air -- hope you all can hear my little peanut whistle of a 6m signal from North Texas!!!

Thanks, Jamie for a great forum!!

1254. Better new policy

Yahoo group: 6meter (2000 — 2003)
Date: 2002-07-19 05:02:57 UTC
From: James Carlin
Topic: 1254 Message: 1254

I could care less what stuff you put in a signature block. All I care about is I had to sort through 40 messages in my in box, almost all of them having to do with some crap about Hillary (like a resident of Florida can do anything about who the people in New York vote for) and then this stuff about prayer in signature blocks.

If you ask me, people that fill up their signature blocks with a bunch of stuff are simply trying (or should I say failing) to impress others. I could care less if you are a doctor, a CPA, a CFO, or hold 15 computer certifications. Im not impressed.

I propose that from here on out, we IGNORE and DELETE any off topic messages, as opposed to EVERYONE replying and filling up my box.

PS - if you agree with me, please DO NOT REPLY - delete this message and keep it in mind in the future. If you disagree, delete this message anyway and keep it in mind in the future. Notice how either method you pick will NOT clutter the list with crap nobody else wants to read :)

-- James KF4OUI

group. DOES THE GROUP FILL THAT A SIGNATURE FILE THAT CONTAINS A PERSONAL STATEMENT THAT COULD BE CONSIDERED POLITICAL OR RELIGIOUS IN NATURE, SHOULD NOT BE ATTACHED TO AN E-MAIL SENT TO THIS GROUP??? Please place your response in a msg to the entire group. I will make

1255. Re: [6 Meter Sked] Topics Appropriate For This Group

Yahoo group: 6meter (2000 — 2003)
Date: 2002-07-19 05:16:21 UTC
From: k5mar
Topic: 1230 Message: 1255

I think Dan(W4NTI) says it pretty well, as I understand his response. The MESSAGE should be about 6 meter activity, as stated in the welcoming msg. As for the signature lines, they are not aattachments, as I belive another person tried to suggest. I don't care what signature line is attached to a message, I generally skip that part anyway. I might point out that these groups are NOT democracies, they are the property (so to speak) of the founder, in this case, Jamie R. Dean. He makes the rules, he can run the group any way he wants. If you don't like his rules, then unsubscribe. I've seen some other groups with a thread that, strictly speaking, was off topic. However, it WAS intertaining, and an ocassional bit of levity is appropriate in a serious world (to paraphrase Wally Schirra, astronaut). They were not controversial postings, however. What really annoys me about all this is that I subscribe to the digest version, and had to come to Yahoo to wade through all the QRM. When you people click on REPLY, please edit the original message down to the inportant points, and trim all the extraneous garbage. Now, PLEASE, let's get back to 6m activity!

From: chuckiethebrave5@aol.com
Topic: 1230 Message: 1257

boy this is just like geting on the radio and gabbing huh? really when you get on the radio you don't just talk radio stuff you talk about other people or who's doing what etc. so who realy cares if things get off topic? we radio junkies are into radio for a couple of reasons to meet others, to talk radio, to see how far our inconsistent lives can reach in this world, to see if we can get out just a little further than our neighbor etc. here's a question for you. did anyone hear michael savage today on the radio? he was talking about groups that will get money for homeland defence. one was the ham radio group. he was downing ham radio. mimicing like germans or something. a little later a ham operator called up and set him straight. told him how modern and knoweledgeable ham operators were. well savage appologized after that. he said he rembered kids who bought things that was junk that he could have bought cheaper at a store. i guess he thought hams were geeks or something. don

I don't usually post, just watch for DX openings but for what it's worth, I rarely even glance at a signature line unless it may contain an interesting web site. After all these months I had not even read the moderators signature line. And now that I have it will be there every time and I will again forget to read it. I get this in digest form and just skim through.

Ok in light if what I have read from the fine memebers of this group and in the push to get things back on topic here is the deal... Ok signature files can be left alone and used as one sees fit one one condition, The can be no profanity in the signature. We do have some women and young people on the group. Now that this is settled did anyone get to work the band opening last night here in EM95dr I was hearing Minnesota at 5-7 signals.

Subject: Re: [6 Meter Sked] Topics Appropriate For This Group

I think Dan(W4NTI) says it pretty well, as I understand his response. The MESSAGE should be about 6 meter activity, as stated in the welcoming msg. As for the signature lines, they are not aattachments, as I belive another person tried to suggest. I don't care what signature line is attached to a message, I generally skip that part anyway. I might point out that these groups are NOT democracies, they are the property (so to speak) of the founder, in this case, Jamie R. Dean. He makes the rules, he can run the group any way he wants. If you don't like his rules, then unsubscribe. I've seen some other groups with a thread that, strictly speaking, was off topic. However, it WAS intertaining, and an ocassional bit of levity is appropriate in a serious world (to paraphrase Wally Schirra, astronaut). They were not controversial postings, however. What really annoys me about all this is that I subscribe to the digest version, and had to come to Yahoo to wade through all the QRM. When you people click on REPLY, please edit the original message down to the inportant points, and trim all the extraneous garbage. Now, PLEASE, let's get back to 6m activity!

To: 6 Meter Sked Group (Yahoo)
Subject: [6 Meter Sked] Repost of My (Groups founder and Moderators) Decision

Ok in light if what I have read from the fine memebers of this group and in the push to get things back on topic here is the deal... Ok signature files can be left alone and used as one sees fit one one condition, The can be no profanity in the signature. We do have some women and young people on the group. Now that this is settled did anyone get to work the band opening last night here in EM95dr I was hearing Minnesota at 5-7 signals.

73 and Good DXing,

Jamie R. Dean - KE4HTM

Internet E-Mail..: ke4htm_jamie@...
AX.25 Packet Radio E-Mail..: ke4htm@kd4gca.#gas.nc.usa.na

Romans 10:9-10 (NIV) That if you confess with your mouth, "Jesus is Lord", and believe in your heart that God raised him from the dead, you will be saved. For it is with your heart that you believe and are justified, and it is with your mouth that you confess and are saved.

1267. Signal to Noise

Yahoo group: 6meter (2000 — 2003)
Date: 2002-07-19 15:54:17 UTC
From: Brendan Van Horn
Topic: 1230 Message: 1267

> What makes the difference how long it is?

Time and space. Neither of which I have in infinite amounts.

> Does it really take that much longer to get the message?

A few lines doesn't make that much difference, but these page long signatures take up quite a bit of room. Add the 18 lines from the footer from the group and a few more for Yahoo's advertising and we have a message that almost all junk.

On top of that people don't trim the message when they reply. For example, the original message I'm replying to had two copies of the footer. Is it that hard to trim some of the useless junk from your messages?

> Does complaining about a signature file add any more time to your life?

No, but maybe someone will listen and start trimming the messages down a bit. That will make this a better list.

> Remember, the word is TOPICS not SIGNATURES...

The original poster asked for our comments about signatures. So I gave mine, that is on topic. At least that topic.

From: Kc2aup@aol.com
Topic: 1269 Message: 1269

ENOUGH, ENOUGH, ENOUGH of this Bull Sh_t. What the hell is the matter with all of you? It was told to be dropped once before, now that's it. Drop it.....
Every time I open my mail, which is at least several times A DAY if not more, all I see
is all this crap. Who is saying something about someone else, who is cutting someone, someone cutting him back, then someone else jumping in and passing even more comments. When is it going to end? If you want to talk like that, go into a chat room or send each other a e-mail. But, stop it on the board already. This is not why I signed up to this list. If you still want to continue like this here, and be babies about it, then I suggest you go to babycenter.com. I'm sure people there are used to hearing whiners all day long...

Thank you.....
Frank

"Your 4-2 hard copy" is NOT RST. Which btw means..

R= Readability 1-5 (as in Q5 = Readability perfect (5))
S= Signal strength 1-9 (not necessarily a "s-meter" reading)
T= 1-9, Tone of CW note/or digital note. 9 meaning perfect with no chirp,
hum or klix.

Sounds like 4-2 hard copy is something like ''my 1st personal is''.....that
about it?

1278. Re: [6 Meter Sked] Test

Yahoo group: 6meter (2000 — 2003)
Date: 2002-07-20 16:17:30 UTC
From: Jamie R. Dean
Topic: 1268 Message: 1278

It was RST....(It was a joke in response to a earlier msg)

Jamie R. Dean - KE4HTM

Internet E-Mail..: ke4htm_jamie@...
AX.25 Packet Radio E-Mail..: ke4htm@kd4gca.#gas.nc.usa.na

Romans 10:9-10 (NIV) That if you confess with your mouth,
"Jesus is Lord", and believe in your heart that God raised
him from the dead, you will be saved. For it is with your
heart that you believe and are justified, and it is with
your mouth that you confess and are saved.

"Your 4-2 hard copy" is NOT RST. Which btw means..

R= Readability 1-5 (as in Q5 = Readability perfect (5))
S= Signal strength 1-9 (not necessarily a "s-meter" reading)
T= 1-9, Tone of CW note/or digital note. 9 meaning perfect with no chirp,
hum or klix.

Sounds like 4-2 hard copy is something like ''my 1st personal is''.....that
about it?

Dear 6M PSK guys,
I am brand new to 6M with a transverter on my JUPITER. I have been
successful on CW and SSB today with the CQWW contest. Where do I look
for PSK31 sigs?

be gentle with a new guy :-)

Topic: 1281 Message: 1281

glad that some folks are having a good time with this contest, but I have not yet heard a signal from FN34. Granted, I am not greatly endowed when it comes to my station, but it sure seems like there should be something out there in either 6 or 2m. Oh well....maybe after the sun goes down. Good luck!

Buzz,

I worked several stations in FN34 today. Or close in and around it. I only have a 3 element for six at 30Ft.

Are you on FM or SSB mode and what is the antenna?

1286. RE: [6 Meter Sked] wide open

Yahoo group: 6meter (2000 — 2003)
Date: 2002-07-21 00:22:13 UTC
From: James Hayes
Topic: 1281 Message: 1286

Hi Buzz,
Well it's been quiet here all day with a few exceptions...only about 12 contacts so far and most of them out of EM, EN grids when the openings have been there! kind of weak this year. Anyone working it up here turn the antennas to NNY!!
GL see you on the bands......

Jim, N2YEV
FN34gs, Plattsburgh, NY
SixClub #1663, SMIRK # 6480

glad that some folks are having a good time with this contest, but I have not yet heard a signal from FN34. Granted, I am not greatly endowed when it comes to my station, but it sure seems like there should be something out there in either 6 or 2m. Oh well....maybe after the sun goes down. Good luck!

The 6 meter band is alive with signals from the east coast to Alabama. THis is the CQWW VHF contest. JUMP IN.. all you need do is send your Grid Square.

Don't give it up Buzz. I used a simple six meter dipole for a while myself.
Trick is just get it in the clear.

1288. Unsubscribe Help

Yahoo group: 6meter (2000 — 2003)
Date: 2002-07-21 02:19:08 UTC
From: Jamie R. Dean
Topic: 1288 Message: 1288

Seems some people for verious reason have choose to unsubscribe from this group. But even after doing so they still are getting the mail from the group. I have not control over this. This group is ran by Yahoo Groups with me as the control operator and moderator. When someone signs up or unsubscribes the command is sent to a server at Yahoo and it does the work. All that happens on my end is I get a nice e-mail from the yahoo server telling someone left or joined. The e-mail you get when you join is a file I placed on the server that is sent to each one of you. This is also true of the e-mail you recieve when you unsubscribe. The words in each of these mails are from me and I do mean what each one says. So if any of you have trouble unsubscribing please be patient. Yahoo is sometimes slow in getting things done. I hope one day soon I will have the time to move the group to my rented server and personal domain. At that point I will have more control over server issues.

73 and Good DXing, (July 20, 2002)

Jamie R. Dean - KE4HTM

Internet E-Mail..: ke4htm_jamie@...

Lots of LA and SSW stations from EM96. Worked 4 guys in "Loooseeanna" in a
row...asked if they were all friends....they couldn't even hear each other.
About 12 contacts in the short period of time I had to play with radios.
Wish I'd had more time.

Andrew

Hi Ken,. there is group that does PSK and other digitial modes on 6
and 2 meters. I am not setup for 2 yet but have been trying 6 meters
with no luck yet. Anyway the 6 meter freq that we have been using is
50.290 USB and if you are on 2 meters the freq is 144.150.
The group is on yahoo it is called PSK_VHF_UHF_HAMRADIO.

Hope to hear you on 6 meters.

Best
Kurt

1308. Hot night last night!

Yahoo group: 6meter (2000 — 2003)
Date: 2002-07-30 13:48:00 UTC
From: MadDrewski@aol.com
Topic: 1308 Message: 1308

Got home late, finally got a chance to turn on the FT736R....and I hear beacons at S9+! Worked several new grids in the short time I had to play w/the radio before the XYL started complaining. From EM96 worked several Mich. area stations and several in 5 Land around 0200 UTC. Anyone else have fun last night on 6M?

Let's hope it repeats tonight!

Andrew

From: Tom Zinck
Topic: 1309 Message: 1309

YES !

I was "6M Mobile" for the first time last night. I setup my Ranger RCI 5054 25W rig in the mini-van with a 6M verticle and a MFJ Tuner. I was able to work 4 stations in Florida and Georgia around 2400UTC from FN-25. I could have worked more, but I ran out of time.

I was parked in the "Gatineau Hills", North of Ottawa, Canada, up at about 1,145 feet, with a great southern exposure.

Lots of fun !

1313. Band Opening This Evening.

Yahoo group: 6meter (2000 — 2003)
Date: 2002-08-02 02:04:51 UTC
From: Jamie R. Dean - KE4HTM
Topic: 1313 Message: 1313

Today has been a good day on 6 Meters USB for me. I got 2 new grids EN31 & EM29 that I was needing this evening. This morning I worked FN 41 & FN42 around 13:00 UTC. All worked on 50.125 MHz. I already had those grids but it was nice to see the band back open to the North East. I wish the band would open for us here in EM95 into the DN and DM lands. For 3 years I have been trying to get grids and states in those areas and so far just 2 grid squares. But most afternoons I do listen to the west so you never know.....

Was on the way back from a customer visit today...had tossed the MFJ 9406 QRP rig in the car and decided to monitor some on the long drive home....managed to snag Grand Cayman! (Tnx, David ZF1DC!!) Not bad with 8 watts into a 1/4 mag mount! Seems more and more that afternoons are opening up....during the hours most of us are at work. :-(Hmm...need to work more long trips into the week's schedules.

Cheers!

How true! However, the MFJ I got used....I've seen them for around $100, and a piece of copper tubing and some coax will make a fine horizontal loop. Works FB for getting started, and quite inexpensive. Cheap is quite possible on 6M.

I just wanted to let people know I got hooked on 6 Meters tonight. There was a great band opening here in DM 79. It started at 6pm and went to 11pm. 2 weeks ago my brother KA1MWD visited me from Phoenix and built me a 1/2" squalo out of copper pipe. This thing worked awesome. I worked 18 grid squares from EL17 to DN17 and most where in the EN29-36 area. I will be listening all weekend give me a call on 125. I am running a FT 100 at 100 watts. I live 9 miles north of Idaho Ssrings, CO at 10,500ft

I was refering to a 'gentleman' called Andy Ruppe. EX N4XCV.

I should have placed those comments in a direct e-mail.

If you are interested drop Jamie a note and look at his web page. Its a
real eye opener.

1337. Gone fro a few days.

Yahoo group: 6meter (2000 — 2003)
Date: 2002-08-05 19:47:46 UTC
From: Jamie R. Dean - KE4HTM
Topic: 1337 Message: 1337

Folks,
I will be gone for the next few days camping. I will have no computer or internet to keep tabs on the list, but if there is any trouble (I know there won't be) please send an email to 6meter-owner@yahoogroups.com and the minute I get back I will handle it. I will be in the Mtns. of Eastern Tennessee and I will have 2 meters with me, I 'm still looking for a cheap mobile 6 meter rig, I will be on 146.520Mhz (FM Simplex Calling Freq.) as I always am in the mobile. I will be around 6000ft in elevation so if you are in this area maybe you could give me a yell. (BTW, Wish me luck the campground says they are having a black bear problem this summer)

hey jamie
i hope you have fun and get to work some contacts you need to find one of
those MFJ 9406 6 meter rigs they are small and light and QRP
as for the bears just remember to keep food and food wrappers in high places
so the bear cant get to them just having them sealed isnt good enough
and keep the family dog near by....grin
have fun

Jamie, give me a shout off-list and you can borrow the MFJ. Battery is fully charged and ready to go. If you'd really like, I've got the solar panel for recharge! The Gelcell will run the MFJ for a day or two without recharge. Even have a "V" dipole & pushup mast you can borrow. All I ask it that it comes back complete and without bear teeth marks ((grin)).

Last week I heard from a worker on the Blue Ridge Parkway that a man had
attacked a Bear in the Great Smoky Mtn. National Park. Apparently, he saw
the bear doing what it does in nature - attacking a deer and he thought it
wasn't right. So, he attacked the bear. Have not been able to confirm this.
I hear this is the second one lately.

This is a true story. I spent last week in Cades Cove where the attack took
place. It happened twice and was written up in the Knoxville newspaper.

To the anyone who runs yahoo group!

Yahoo has given us a way to cut down on the spam that we get in our groups. Under group settings -> Posting, set Moderation to Unmoderated, Moderate new members (posts from new members require approval)

That should cut the spam down abit.

From: Jamie R. Dean - KE4HTM
Topic: 1350 Message: 1350

We are home from the Roan Mtn. State Park in the beautiful mountains of Tennessee. No one was ate by a bear but on the other side of the camping area a camp site had one come through 2 nights in a row. About the only wild life the wife and I saw was a wide cat some one had set free in the park and a lot of deer mostly babies and their moms. I did take a 5 min hike on the Appalachian trail but after 5 mins uphill I decided that I am not in good enough shape to hike. Beth (wife), Amber (puppy) and I drove to the top of the mtn and I made a few 2 meter FM contacts to Spartanburg, SC about 150 air miles away. Seems very few people monitor the National FM Simplex Calling Freq. of 146.520MHz. anymore. But for now I need a long hot shower, and time to sit down and answer my 168 emails plus update my website.

BTW, Andrew thanks for offer to use your rig on my trip but when I sent my e-mail I was on my way out the door so I just recieved it.

From: Jamie R. Dean - KE4HTM
Topic: 1352 Message: 1352

The person using the e-mail address ingtirkmc@... has been banned from the list for posting advertisments in the group. I have changed the membership policy of the group to restricted. All this means is someone can't join the group and 1 min later post porn or ads. For the time being I have to verify each new member to the group. Since verifying folks is almost impossible what I will be doing to just turning on their access to the group after they request to join. This will work like the waiting period for a handgun (i hope), as it will keep ones that want to cause trouble away from the group, and maybe give them a chance to forget they wanted to do harm in our group.

I hope you had a good time camping and had no bear problems. I went camping in the Shenandoah once and on the way in the Ranger told me bears were taking backpacks. So I just took the shoulder straps off mine so they couldn't wear the thing. Had no problem.

HEHEHEHEHEHEHEHEHEHEHEHE!!!!

I'm going to use that one as a tenderfoot joke next time I go camping and encounter a group of them on the 'Trail. Last time I was on the AT I ran into a group (12 or so) folks that had backpacks the size of small cars (mine averages 30lbs w/the rig and some water). I sat on top of a ridgeline and watched them sweat uphill for an hour. Don't think I've seen so many fashion labels at one time as they trapsed by me heading for low country to set up camp. They came back uphill at a run a few minutes later.....the group was crossing a meadow and encountered a bear. Bet the bear ran in the other direction faster than the humans! The group wanted to camp on top of the hill that evening...I sent them to a shelter for the night. I stayed on the side of the ridge 20' in the air in a hammock....stars are SO much clearer! Next time I'm taking the 6M SSB rig and will work some hilltop DX....much better than the HT and FM. And take off the straps of my backpack so the bears won't steal it ;-)

Oh, well...back to work.

Andrew

1355. Perseid Meteors tonight

Yahoo group: 6meter (2000 — 2003)
Date: 2002-08-12 17:19:04 UTC
From: Dan/W4NTI
Topic: 1355 Message: 1355

Weak Signal operators -- listen up. The Perseid meteors are on their way.

Lee Wical, KH6BZF, says over the QCWA remailer that from midnignt to dawn on Monday August 12th and Tuesday August 13th about 60 to 70 meteors per hour will enter Earth's atmosphere. This particular meteor shower is created by the Earth passing through the debris field left from the Swift- Tuttle comet.
The grain-like particles enter Earth's atmosphere, burn up and create what most people call shooting stars.

The Perseid Meteor shower is not expected to be as spectacular as the Leonid Meteor shower that occurs each November. But, if viewing is good, people will not be disappointed. And if the ionized tails are good, ham radio meteor scatter DXers and WSJT users will be happy as well.

From Newsline.
****
****

Even if your not into the big antenna's etc you can possible hear some good meteor sounds tonight on six meter SSB. Just leave the rig sitting on 50.125 and you will hear 'bursts", and snatches of conversation. And if its a good trail it could sound like E skip in the middle of the evening.

Point the beams NW if possible and give it a listen.

As for those not equiped with the new mode of WSJT (a meteor scatter program) it doesn't matter. CW works as does SSB on six meters. Make the transmissions short and no rag chewing please... hi.

Have fun.

Dan/W4NTI Alabama

Topic: 1357 Message: 1362

Jamie and the rest of the group,

Thanks for the kind words. I only wish to share my fun & enthusiasm and encourage others.
I hope I did not come across as a braggart. 6M DXCC is a long range target. It may take several solar cycles. I sure hope the next cycle produces more F2 for North
America. I watched the DX spots for other parts of the world with envy. Next one is our
turn!!!

Good Luck,

Ken AB5A

not hearing a thing here in EL98
heard some new englanders last night after midnight but didnt work
anyone
this MFJ is really lacking in many areas
i need a real radio...grin
good luck

Hmmm....heard quite a bit of scatter in EM96 (N central NC) but didn't work anyone (early meeting....couldn't stay up late enough!! Darn that work!!). The FT736R had no problem picking up the scatter, nor the MFJ 9406 (outside with a horizontal V dipole to get a bit of gain....pointed it NW and listened.) Most guys were on .125....didn't hear anyone off the calling freq. Just wish I could have stayed up later. Maybe next time. Dennis, is there a problem with your MFJ? Mine's quite sensitive, just not as hot a receiver as the 736R. Got ZF1DC the other day using the MFJ rig and a dipole. Of course, it IS a basic rig!

hi andrew
no there really isnt anything wrong with it other than i am use to a
newer radio i miss the noise blanker and the squelch and a good VFO
i had to sell off my Icom 706mkII to pay bills and i traded my multibad
HT for this MFJ
which i could find an old swan 250 atleast i would have more than 10
watts out
oh well my better half has promised me a new radio as soon as we are on
solid ground again
BTW i am hearing 3 landers right now
so have fun

Ah, I understand. I DO like some of the bells & whistles on the 736R!! And, to be honest, the receive on the MFJ is actually a bit better than the Swan 250C I had. No contest on output power, tho. Check eBay, there was an inexpensive 6M amp listed the other day. 80 watts or so out should do the trick coupled with the MFJ.

Cheers!
Andrew

1369. three island croosing-glenns ferry idaho

Yahoo group: 6meter (2000 — 2003)
Date: 2002-08-14 03:12:38 UTC
From: chuckiethebrave5
Topic: 1369 Message: 1369

last saturaday afternoon my boy and i went to three island park also know as glenn's ferry? we saw a reenactment of the crossing of the river by wagons. there was 2 horse teams and 2 oxen teams. when you first see them 4 indians are on top of the mountain. then you see wagons on top of the mountain. then the wagons come down the mountain and the indians meet them at the bottom by the river. then the horses go first. the indian leads the first wagon in. they traverse to the first island. the water was shallow. at the next leg they get into deep water. the horses and the wagons swim and float. they have to swim to a sand bar. the wagon and horses have to hit the sand bar just right or the animals and wagon keep on floating down the river. a lot of settelers drown in the river because they didn't know how to swim. once on the sand bar the wagons walked the sand bar until out of the river. next came the supply horses. they swam. then the next horse drawn wagon made it on the sand bar. it waited for the oxen teams. the oxen weredifferent swimmers. one ox team stopped in the river. it took awhile to get him started. the oxen had to be led with a rope by the indian guide. they almost didn't make the sand bar. but they did. this year no mishaps. all horses and oxen made it. biy oxen sure are weird cows. tall cows. last year a horse drown. don

I use Access for logging. An access database is much better than a spreadsheet because you can create queries to sort through the records.

there are many differnt ones all depends on what you want to do with it
and how fancy you want it and how much you want to pay for it
i like logger its fancy and free also YPlog is nice rather plan and
simple
but i really like sharps log its very fancy but not cheap its like $59
but this will do everything for you even print out QSL cards that are
completely filled out all you do is put a stamp on it and off it goes
good luck

I use LOGic 6 and love it. I also have TSX-Manager which is a
high-powered rig control application. The two integrate flawlessly.

I have an FT-847 that I use for 6, and the two pieces of software make
logging and control a breeze.

I use the N1MM logger which has two key features -- it includes rig control (with direct frequency entry from built-in DX Cluster interface) and it's FREE!! There is a Yahoo! Group for posting questions, and it's very easy to use and maintain. Here's a link to his homepage: http://pages.cthome.net/n1mm/

1376. band opening

Yahoo group: 6meter (2000 — 2003)
Date: 2002-08-14 02:33:37 UTC
From: Bill Grimwood
Topic: 1290 Message: 1376

I worked Pennsylvania and Vermont last night from northern Alabama. I got a telephone call that lasted about 30 minutes and when I returned the band was dead. That is the way it goes.

Topic: 1377 Message: 1377

I hate it when that happens. I worked an opening once on 6m FM that the whole opening lasted around 10 mins. This was back in 1995, and if I remember right around 22:00 eastern. A friend and I was talking and a guy joined in and asked where we were. Come to find out he was in Thunder Bay, ON, Canada. But we got about 2 lines apiece off and turned it back to him, in 30 seconds he went from a S-7 to nothing. But that is how the "Magic" band goes sometimes.

73 and Good DXing,

Jamie R. Dean

1378. Re: [6 Meter Sked] band opening

Yahoo group: 6meter (2000 — 2003)
Date: 2002-08-14 14:01:15 UTC
From: Dennis Kaylor
Topic: 1377 Message: 1378

the opening last night was nice i worked my brother who is in EN72 and i
am in EL98 we talked about 30 mins or so then he started to fade on me
when i went back to the call freq i worked a few more up in the ill and
mich area then it died
but like dean i have worked people who the band only lasted long enough
to get there QSL details and the band dies that happens a lot mid day
type of thing i am disabled and stay home a lot so i have lots of time
to monitor 6 meters and it opens and closes a lot when people wouldnt
think it would
as for your phone call you need to get your priorities right you can
talk on the phone any time 6 meters only opens once and awhile...grin

Topic: 1379 Message: 1379

hello
i have an MFJ 9406 6 meter radio and i want to add a vernier dial to the tuning on this radio does anyone know where i can get such a thing?
i have looked on radio shacks website with no luck
so if you know where i can find such a thing please let me know
thanks

Try 'Surplus sales of Nebraska'. Do a google search for the web catalog.
Or check a recent QST. I've seen what your looking for advertised.

?Thought it already has a vernier dial...mine does. I do agree that a finer rate ratio would be good....I may have a few sitting around in the junquebox, lemme look around. BTW, I dialed in 50.125, .130, etc. w/the bandspread ("fine tuning) set at the 12:00 position and marked each point on the case. Cheap calibration!

Andrew

Yup, I agree that it's not much of one!! Let me look this weekend and I'll see if I can find anything better, esp. w/larger numbers than the stock unit. Should have a few around....what would be nice would be a "two speed" unit....fast on the outer dial, slow on the inner dial.

I'll let you know what I find.

Cheers!
Andrew

hell i would be happy with one that turns the knob fast and the shaft
slow that way you can fine tune to them
thanks let me know what ya find

From: Mark Seymour
Topic: 1300 Message: 1386

Hi,
I am looking for a schematic for an IC-505. I have the
radio with a burnt R81. If anyone has one and can
either get me the schematic or the value of R81 I
would appreciate it very much. Thanks Mark

1387. Only CW on 6m?

Yahoo group: 6meter (2000 — 2003)
Date: 2002-08-19 00:59:00 UTC
From: sburggsx
Topic: 1387 Message: 1387

I have just very recently (read: a week ago) purchased a HF/6m transceiver. Reading this particular group may have helped that decision. :) What I have found in scanning through the bad is most code. As a Tech currently without code I've become a bit discouraged. I have yet to hear a phone QSO on 6m. I've been scanning up and down the band on both sidebands, AM, and FM and monitoring 50.125 LSB over the last week. Does anyone have any suggestions for a rather new ham?

Steve
KC8SLY

well steve i am sure you are about to get bombarded with replies
the CW you most likely are hearing are beacons
if you want phone you need to listen to 50,100-50,200 with 50.110 and
50.125 being the call freqs
i would listen there and also keep in mind that 6 doesnt repeat
DOESNT!!!!! open up like a typical HF band it opens when and where ever
it pleases so you have to monitor often dont just scan cause you could
miss it
good luck

Steve,

You want to try upper sideband on 6 M. Don't hesitate to call rather than listening only! I assume you are in 8 land, so I think we maybe a bit to far for a QSO. My amp is down so I have only 10 W now. What is your grid square/location? Try posting at the following url:
http://dxworld.com/magicband.html

That might help you get some contacts.

Good Luck!

Thanks to both of you for the fast responses! To answer your question I'm an EM79, guess I need to put that in the sig. In monitoring 50.125 USB I heard the clearest CW CQ I've heard on 6m yet. I've also gotten several small "words" but nothing long enough to make a contact. I guess this means I'm hooked? ;)

LOL welcome to Eskip steve it does that also could have been Meteor scatter last monday
if you want an easy way to copy CW there is a nice little sound card program called CWget just run a cord from your external speaker jack to your line in or mic in on your computer sound card and this will decode code for you
i use it to tell me where beacons are coming in from since i no longer know enough CW other than CQ
good luck

Don't be discouraged. 50.125 MHz is the place to listen but all 6 meter sideband is on Upper-sideband not lower. 6 meters is not the kind of band one can listen to a couple hours a day and expect to make contacts. It takes commitment. I found I get most my contacts by sitting my rig on 50.125 USB and letting it run most of the day. Before lunch I swing my horizontal 3 element beam toward Europe and after lunch I swing it to the west. (I'm in NC) I seem to get more contacts this way. I wish you lots of luck in your hunt for contact. Just be patient and they will come.

73 and Good DXing,

Jamie R. Dean

Subject: [6 Meter Sked] Only CW on 6m?

I have just very recently (read: a week ago) purchased a HF/6m transceiver. Reading this particular group may have helped that decision. :) What I have found in scanning through the bad is most code. As a Tech currently without code I've become a bit discouraged. I have yet to hear a phone QSO on 6m. I've been scanning up and down the band on both sidebands, AM, and FM and monitoring 50.125 LSB over the last week. Does anyone have any suggestions for a rather new ham?

Seems all I needed to do was ask the question. Later on last night I picked up what sounded to be a net from northern Indiana. I could only make out one station that came through booming. The others were too weak to make out. Since I couldn't tell when someone was or wasn't talking I didn't chance interrupting. But at least my own curiousity was answered. Thanks for all your replies.

I'm still trying to figure out how to rotate the dipole. I guess
it's possible with a little work (and a lot of clothesline).

Yes, the white noise is currently driving me crazy. Someone please
break the silence.

I think we are both agreed that in order to 'work six meters' then one must be at least half nuts....hi

The real loose nuts are the ones that leave it on six meters in the background while they sleep. Wonder why most of them are not married?

Dan/W4NTI

1404. Re: [6 Meter Sked] Only CW on 6m?

Yahoo group: 6meter (2000 — 2003)
Date: 2002-08-20 01:27:50 UTC
From: Dennis Kaylor
Topic: 1388 Message: 1404

well then i am not that bad when i had the 706 i would set the squelch
so i wouldnt hear the white noise but would hear them break thru

you want to see the real 6 meter nuts they are the ones who do 6 meter
EME i seen a guys website it had a pic of his array it was 4 11 ele
yagis each one on a 52 foot boom and the stacking frame was rohn 25 for
the verticals and rohn 45 for the horizontal
what a nut which i had that kind of cash to play like that

LOL i get excited to work 30 miles away after doing antenna work god knows the band wont open to help test it for weeks

but on the brighter side 6 opens a lot more often then does 2 meter SSB

hey guys
here is a list of software i have found over there years that is very useful for VHF and above work if your interested in a copy of any please email me and i will send you what you need most are availible on the web as well

CWGET- a CW decoding sound card software

GridSquard-a windows grid map and logging lets you see in distance and bearing where a grid is and also lets you keep try of ones works

WinWAS- windows worked all states program

SatSCAPE-A Free satellite tracking software tracks the moon too for any future EMEer

QSLMAKE--A windows based QSL card designer and printer

DXmonitor--allows you to track DX via the internet with out a browser and no need to tie up a radio

i think thats it if your interested drop me a line

Give it another try! Listening (and calling) from FN31kj. Hearing
unidentifiable snippets and occasional CQ,

George

Steve, they call it the majic band for a reason. Some day's (most) you will hear nothing, then on some day's it will start out in one direction and by the end of the day it will be coming in from 180 degrees from where you started. Some day's you will get single hops and some day's you will get double hops. Then there are those rare day's that it is wide open everywhere and you will wonder where all these 6 meter stations came from!! Yupper I'm one of those that leaves 6 mtrs on when ever I'm in the shack cause ya just never know!! I do turn it off when I go to bed though.....loved that one....lol.
Steve what are you using for an antenna? 73...de...KØDLW DN76 ND...Dan

1415. Operators New to six meters

Yahoo group: 6meter (2000 — 2003)
Date: 2002-08-20 05:29:05 UTC
From: w1nra
Topic: 1415 Message: 1415

Hey Steve and other new hams or if you are new to six meters. This band does act different to say the least. I don't work it much now but when I first got my Kenwood TS690s, Six was open pretty often so when I hooked it up I heard some stations and was determined I would talk to somebody. Well, without a six meter antenna, I ran a random long wire out my window to the post on the carport with an insulator then ran from there to a tree in the yard off to the right of that post. Well I got in and tuned the mfj 949e which works great on six meters also. I made my first call ever on ham radio and a station came back first call from Canada!!!! wow was I surprised. He gave me an S-9 signal report. Keep this in mind now. My "rigged" wire antenna was probably 8 feet at the highest point and about maybe 50 feet total length and I was really happy with it for sure. Well I went on to work about 38 or 40 states on six before I upgraded and have since more or less forgot about six meters. I do listen some but not much going on now.
Remember this and a lot of old timers don't seem to realize it especially if they have beam antennas for six. YOU DON'T ALWAYS POINT THE ANTENNA IN THE DIRECTION OF THE QTH OF THE OTHER STATION BUT YOU MUST POINT THE ANTENNA ACCORDING TO THE SIGNAL... I called cq one day and a station in N. Dakota came back and I could hear him pretty good. Then he said "let me turn the beam in your direction" and I never heard him again. Six meters travels in a different manner than the lower bands so it may not travel in line with your contact. Just a small point but lot of folks don't realize that.
I have worked Cuba several times on six and several islands in the carribean and other points south and east.
This was 6 or 7 years ago now.
I did have a friend who worked all states on six using a MFJ-9406 SSB radio!!! in less than a year !!!! I guess he worked about half n half CW AND SSB. Bear in mind that he was an old time DXer and had been a ham for a long time. He was also disabled and was by the radio all the time. He did have the CW board in the radio and did get a Mirage amp during the last half of the year. His call was KR4M, Cliff Watson. He was a good friend of mine and I now have his radio. If you haven't gathered already Cliff is not a SK. So you can do wonders with a small low powered radio if you can check the band at all times of the day. Cliff really did a great job but didn't live maybe a year after getting the WAS.

Anyway six can be fun and a real challange. By the way most SSB on six is on or near 50.125 so don't waste a lot of time scanning the whole band. If you don't hear anything below 50.300 there's not much reason to look any higher. I don't work AM OR FM on six so that's another thing.

So new guys, have fun and just hang in there. I WOULD NOT BUY A SIX METER RIG RIGHT NOW unless it just happens to be in a radio you want otherwise. Just not that much going on.

I run a beacon on ten meters and listen to them all the time on ten. If you listen to the beacons on six meters they will let you know where and if the band is open. Also don't assume the band isn't open because you don't hear anyone calling. Sometimes EVERYBODY is listening and nobody is calling so give a call or two on 50.125 or 50.135 and you may get a surprise with a return call.

Remember if conditions are favorable, a random wire with a tuner will work anywhere in the country and some places outside the USA.

Good luck and go for it..

I'm still trying to figure out how to rotate the dipole. I guess it's possible with a little work (and a lot of clothesline).

Try using 2 six meter ham sticks. HRO carries a mount that allows you to mount two of them together giving you a 1/2 wave dipole. You can run this either horizontal or vertical and it turns real easy.

My current 6m antenna is a 1/4 wave dipole. I've got it up 15-20 feet in 2 trees in my backyard. I don't believe it's quite clearing the roof, but it may be. Due to the tree placement the poles are facing roughly NE-SW. I guess this could sort of explain being able to hear Northern Indiana 2 nights ago and making contact with middle Indiana last night. (both NW of me)

steve
what you should do is invest in either a pushup pole or 3 pieces of
heavy duty mast from radio shack and a small TV rotor and a 3 element
yagi or bigger your performance will greatly increase with the higher
gain antenna so you will hear more and be able to work more

LOL no doubt
i have the same thing here an MFJ 9406 with 10 watts running into a 4 ele cubical quad at 50 feet
if you can tune down below 50 and if you have FM flip over and you can listen in on those baby monitors

well channel 2 and 6 meters is painfully close but with the invention of cable TV i dont think he would cause as much problems to the viewers as the transmitter would cause him trying to recieve 6 meters could be rather loud depending how far away he is

Well, duh.

Channel 2 starts at 54 Mhz (actual video carrier is at 55.25 Mhz), so
I'd expect 6M to screw up channel 2 in ANY area that has a channel 2.

Some cable TV boxes (used on older non-cable ready TVs) use channel 2
as the output to the TV. Makes life interesting.

hey guys
here is a website i put together that has a whole heap of stuff should keep you surfing for awhile
there is a file section that you can download that list of files i emailed about a couple of days ago should be easier to get off the server than thru email
hope you like
drop me an email to tell me what you think
thanks

Yeah it was fine as long as it was ham or family based. Just here on Yahoo Groups there has been alot of people joining groups and posting porn ads. I'm just trying to protect the young users of the group and the female users too. If you let one person get in and start posting porn ads then more will come. But ham and family sites are cool just not comerical or porn. Now I will allow links to sites about ham radios for sale or info on ham radios.

1434. Re: [6 Meter Sked] New Pics Here..

Yahoo group: 6meter (2000 — 2003)
Date: 2002-08-22 02:01:37 UTC
From: Jamie R. Dean - KE4HTM
Topic: 1430 Message: 1434

Dennis,
It looks like you have spent alot of time on your page. I like the color contrast of the background. I would like to make a suggestion if i may, the main page is really long. It takes alot of scrolling to view it. You have alot of sections on there that could have there own page. To make it user you could use the same background for each page. I have a poorly designed web site that if I every stop being lazy I will do some more work on but it is a good example of keeping the pages small and on topic. The site is a nice little radio page if you would like to see it, it is at http://www.geocities.com/lordbane I hope to move it to my domain jamierdean.com here soon.
Dennis, keep up the good work. There are not enough good web pages for ham radio out there.

73 and Good DXing,

Jamie R. Dean

hey jamie
thanks for the tip
it started out the way it is as a gag so you would look at the tower
just going and going like the energizer bunny and your right it has
gotten way to big i didnt do the links below the second table a friend
of mine did it and i dont even know where he came up with them so it
will take a little research to find everything and give them there own
page i just got off my ass and added that files page took me forever so
your not the only lazy one
see ya
thanks for the praise on the site

hey james
i am glad you liked the site and no i dont mind you bookmarking it at
all
the tower and the guy on it started as a joke
a friend of mine who lives in tampa had a problem with buzzards sitting
on his six meter beam so when i saw that pic it reminded me of him so i
added it to the never ending tower cause as VHFers we always want taller
and taller towers
yes a dipole isnt going to do you to good unless the band really is wide
open
i would suggest either a M2 6m5x which is a 5 ele yagi or a 4 or 6 ele
quad
i just put up a 4 ele quad here about 3 months ago and it works great
which is was 6 elements but oh well maybe in a couple of years the 6 ele
quad i want is nearly $300 cubex makes wonderful quads good materials
and easy to assemble
good luck on 6

well towers arnt that much money you can find great deals on used ones
from estate sales or just people down sizing there antenna farms ETC,
i got lucky i just got married just about a year ago and my wife allows
me to do what ever i want as long as the bills are paid first
so in the last year i put up a 45 foot tower with the cubex kingbeeII
quad (4 eles on 6 and 8 ele on 2 meters) and a comit GP9 dualband
vertical on the very top like around 60 foot up
then some bills came due and i had to sell off my IC706mkII
so she has promised when we get back on soild ground i can get a new
radio
so i will just have to put up with this MFJ 9406 till then
she is such good sport she didnt mind me knocking a 3 in hole on the
wall of our concrete block house now how many wives would allow that
say nothing of 45 feet of rohn 25g and a house bracket attached to the
house too...grin
i am a lucky man

Hello everyone. I just joined the list, so I thought I'd post a hello message... the call here is KC2SSB and the QTH is Beachwood, NJ in FM29vw. I work 6m with a Yaesu FT-100D. My antennas are an MFJ 3 element yagi and an MFJ 2m/6m "double zep" vertical for FM work. I've been into 6m for a couple years now and had the luck to work the great openings last September/October, working all of the UK and several other countries in Europe. I also got to work a bit of the US west coast and Canada, including a country in central Alberta!

I monitor often, calling when I have a chance. I look forward to the upcoming September VHF contest. Hopefully the conditions will be there and I'll knock out lots of contacts!

Guess that's it for now!

hey andy
nice to see you on this group i have seen your posts on the differnt ham radio newsgroups and such and probably have replied to one or two
my station has been down sized as of late i had to sell my icom 706mkII but picked up a MFJ 9406 so i can atleast play on 6 its not much os a radio but its better than nothing the antenna is a cubex kingbeeII 4 ele quad on 6 and 8 ele quad on 2 meters i use that for SSB and i have a comit GP9 vertical for 2/440 FM the quad is at 50 foot and the vertical is at 55 or 60

congrats on working EU i did that myself a bit over a year ago working north africa and france spain and italy
so welcome to the list join in often

I used to have the MFJ radio but I craved more, so I got the RCI-
5054. I only recently got the Yaesu and sold off the other radios.
I've seen those Cubex antennas.. look nice, but I'm set for antennas
now with my recent purchase of a 2m/70cm yagi for SSB. All I'd do now
is upgrade my 6m yagi to maybe 5 elements.

andy
if you go to a 5 ele for 6 i would suggest the M2 6m5x its a wonderfu;
antenna and not a bad price if you like performance over price its a
very light antenna the elements are all 3/8th diam aluminum tubing and
the boom is 1.5in
so it doesnt weight much at all
i had one for awhile and was pleased with it
but the quad solved the multi antenna on the tower for the money
hope to hear you on the air soon

if its blowing fuses when you key it up its either hooked up backwards
or blown up
what kind make and model of amp is it?

thats an old 10/11 meter amp with either 4 or 6 sweep tubes in it
if you where really talented you could probably rebuild it to work on 6
meters but i wouldnt begin to know how

check out the homebrew websites they may have something in there that
would tell you step by step how to rebuild that amp
and if its blowing fuses there is some damage done inside that is
causing it to pop the fuses
would be cheaper in the long run to buy a used 6 meter brick 150 watts
for around 200$ than it would to totally rebuild that and only get maybe
300 watts out of it
good luck

The MFJ 9406 is a popular radio. It usually sells for a fairly low price when used. I was using one of these at my old QTH with an MFJ 3 element yagi. It does lack a lot of features, like it only covers the SSB/CW portions of the band and it doesn't have digital tuning, but it's meant as a compact rig that can be taken anywhere. It can even be powered by battery, which is a neat thing. I then upgraded to the RCI-5054 radio, which is really nice. It sells for $300 new and is worth every penny. I'm now using an FT-100D. I am also a tech, so all I'm using right now is 6m/2m/70cm, but I plan on eventually upgrading so I can get onto the HF portion. Hope that helps!

Hi Bryan and welcome. In order to attempt to get the amp to work on six, I would suggest instead of fooling with the caps, I would put in a smaller tank coil with less turns. Maybe about 6 turns in a 1 inch coil form with about 1/8 inch spscing between the turns. This would be a good place to start. Also check the input circuit for a tuned one or does it have just a coupling cap? You wwill have to modify if it's tuned. My two cents. Good luck and 73, Don, K1DH

Can anyone tell me what frequencies are good to listen on for 6m beacons?
Also, what mode should I listen on? I am in FM29, so I would want a beacon
that I'd be able to typically hear during an opening.

give a listen below 50.100 the beacons are all down there in CW but you
can still copy them in USB

Howdy neighbor...

I am in HAMilton NJ -- home of the Anthrax Central postoffice in FN20qe.
Working 6 & 2, also with a FT-100D as for antennas, Gaia has been less
than kind to me on the 6m side recently, another one just came down with
that last rainstorm 2 nights ago.

Anyway, hope to catch you on the air soon.

If it blows fuses like you said. And since you admit not to know how to work on it....then I would suggest you forget it...unless you want a learning experience. Which is good.

Find a local Old Timer that is willing to give you hands on treatment. Trying to repair something like that from this distance on this media is a impossibility.

But for starters....Take out all the tubes. Check them. Then trash them, they are probably all shot anyway since they came off of 11 meters.

Fix the power supply. If your lucky its just the diodes. But don't bet on that either.

Jack it up and slide a new solid state 6 meter brick under it and save some money.

Dan/W4NTI

During the bad storms that passed through a few weeks ago, the refelector on my 6m yagi bent, but I went onto the roof an straightened it out and it seems to be working fine... worked a station in Shrevesport, LA the other day. That incident helped me decide to make my new 2m/70cm yagi a Cushcraft instead of an MFJ, like the 6m yagi.. :)

Well, I've already bought and mounted the antenna, so it's too late now! :) $100 for 5 elements on each band... not a bad deal, very well made, easy to follow instructions. Maybe when I upgrade the 6m yagi, I'll look at the M2...

actually andy thats what i meant when you go upgrade the 6 meter
look at there 6m5x its a very good antenna
also check out www.cubex.com thats where i got my quad although i dont
know how a quad would hold up to the winters up there with all that
snaow and ice
while your there check out the KingBeeII thats the quad i just put up a
couple of months ago and boy it works well

I have looked at Cubex as well. I ran a 4 element quad on 2m for the last few years and just replaced it with the dualband yagi, so I am sure a 6m quad would hold up fine, but I'd be limited on space, so another Yagi would be better for my use. There's a chance I might be getting an old 6m yagi from a MARS station that is getting rid of it. Not sure of the condition, but when it comes down, I'll find out. I think it's about 8 elements. If I get that, I dunno if I'd even be able to mount it. I'm currently using a TV antenna rotator to turn my antennas, so it might be a little big for that rotator.

THANKS !! For all these years after having their 11 element vertical yagi
some time back. I thought it was CRUSHEDCRAP. Sorry.

But it did make great mater stakes....Thats Tomatoe for those that don't
know the diff.

Dan/W4NTI

well i have come to the conclusion that QRP which may be fun and novel
on HF just about blows rocks on 6 meters QRP and Eskip just doesnt get
along at all together so i guess i need to look for a 6 meter brick if
anyone has one laying around collecting dust and care to part with it
let me know
it needs to be 10 watts in and atleast 80 watts or more out and also
must do SSB dont need one of those henry FM commercal amps
thanks

1481. Re: [6 Meter Sked] 6 meter beacons?

Topic: 1462 Message: 1481

Andy -

Try for W3VD in Laurel, MD on 50.064 run by Johns Hopkins University's Applied Physics Lab. It is weak for me in Annapolis, MD so there's a good chance you won't be able to pull it in up there in FM29. A stronger local beacon, KL7GLK, is right next door here in Bay Ridge, MD, just outside of Annapolis. It is on 50.075. Also, on skip, I have received W5VAS on 50.0595 out of New Orleans, LA. A good URL for beacons is http://www.keele.ac.uk/depts/por/50.htm

Welcome and good hunting on 6!

Up until the recent crush of 100 watt six meter rigs hitting the US Market getting a signal on six usually amounted to 10 to 25 watts out.

We managed just fine on that. Perhaps we had better antenna's up or something.

From: cqwb4una
Topic: 1483 Message: 1484

I agree Dan...antennas are 99% of the station..if you run a good beam you can run 5 watts or less and do just as good as 100 watts.. I have tried different antennas and power on the same antenna and if the band is open you can work the world on a 1/2 watt.. so get those long antennas in the air ......

Randy WB4UNA
I HAVE A 617 Cushcraft at 75' 6 elements on a 34' boom works great

When you have high power stations typically running 500w - 1k on 6m, those 10 - 25 watts just aren't enough. I agree, under normal circumstances, when the band is open, those 10 - 25 watts should be enough, but not when you have those big guns out there. They use their 100w radios to drive their high power amps!

Hi Dan/w4nti. Good news. The latest forcast is good for 6m. It will still be low but with the summer ending I think you will see a bunch of good DX coming along, at least I hope so. I work a lot on Navy Mars HF frequencies and we have had a bunch of dead nights with people in the state of Va not being able to talk to each other with legal limit and then other nights or later in the same night the band just bust wide open. Gives me hope. The leaves will come down soon for more local and the cooler weather and shifting patterns may leave wind for explosive band openings. Get out the copper, get out the (that will never work) and give your call a few times an hour. You may be one of the rare dx in QST. Well, we can always hope. Have fun all. KD4YOL Rob FM07 1918Z

Steve is right. All the big DXer's on 6meters use a 6 element or more M2 (M Squared) beam. In my area we have one guy with 4, 8 element M2's stacked and he has worked DXCC on 6 meter CW. I have talked to a ham in the Atlanta, GA area on groundwave with 3, 6 element M2's stacked and he was putting S-5 signalson USB, back here in Western NC (EM95dr). If my rich uncle ever gets out of the poor house I'm hopeing to upgrade from this 3 element MFJ to at least a 5 element M2.

73 and Good DXing,

Jamie R. Dean

From: vhfradiobuff@aol.com
Topic: 1489 Message: 1489

I've checked the band plan for 6m and it seems to indicate that 50.000 - 50.100 is reserved for CW, but I continue to hear CW on 50.125. Any reason that operators don't stay down in the CW portion?

well i think my antenna is average if not a little above 4 ele quad on
an 8 foot boom at 50 foot but if there is someone running a KW and a 6
ele yagi there is no way i will be heard i dont think that my 10 watts
out will even compete with 100 watts and a 3 ele yagi
but that could just be my feelings on it

randy
thats true if the band is WIDE open but if its only Eskip with a lot of
QSB its really tough to get by with anything less than 100 watts
try it some time when the signals are swaying like a palm tree in a
hurricane drop to your 5 watt scale and see who hears you

cqwb4una wrote:

andy
i think that happens when conditions are bad and someone is trying to
work someone that is weak or just cause there is no activity down there
so they try it on 125

Agreed....but for Sparodic E you don't even need that much of an antenna.
Just 3 elements will do the job for that mode. I've never had anything
bigger than a short spaced 4 on six and have worked anything I can hear with
never over 100 watts,

Six meters is a LARGE band. I have NEVER understood why, when the band is open, you constantly hear stations on 125 or 110 yelling CQ. Move around. There is lots and lots of room above 200. Thats where the lower power boys/and gals need to go. Let the idiots with the KW's have the low end.

I agree, under normal circumstances, when the band is open, those 10 - 25 watts should be enough, but not when you have those big guns out there. They use their 100w radios to drive their high power amps!

Your first tour was my second tour. I was in Fulda, then to Frankfurt. I operated the ARMY MARS station of AE1PK in Hanau when I was there. And in Frankfurt I was at AE1AYY.

Yahoo group: 6meter (2000 — 2003)
Date: 2002-08-26 00:29:36 UTC
From: George Matyaszek
Topic: 1483 Message: 1505

Dan,
good point. Whenever the band is open I hear stations as high as 50.250
calling CQ.

George

1506. Re: [6 Meter Sked] 6 meters

Yahoo group: 6meter (2000 — 2003)
Date: 2002-08-26 02:44:03 UTC
From: aa8qqJMauch@aol.com
Topic: 1483 Message: 1506

Hi All,
When I listen to 6, I start at .060 to listen for any beacons. Then I run all the way up through the band to .200. That takes about a minute or so, depending how fast I spin the dial. The faster I spin it, the less time I spend listening on any given freq. Now, if someone calls CQ on any one of those freqs for say 10 seconds, then listens for 10 sec, guess who's probably NOT gonna hear them. Now, if I listen on the "National Calling Freq" as designated by big brother (ARRL), and someone calls CQ there, I just might hear them, if the band is open. I've heard talk in the past about moving the "Domestic Calling Freq" to .200 but until everybody makes the move, (which will only ever happen if big brother pushes it), it ain't gonna happen. So until enough ops start yelling in ARRL's big ear, the "Calling Freq" is gonna stay at .125 and all the talk and complaining ain't gonna change a thing!

73,
Jay - AA8QQ

<Yeah///Because it seems everyone listens to .125 I guess everyone is rock<controlled.

A better explanation, I think, is that many of us leave our rigs scanning thru several freqs on several bands, and we include 50.125 for our 6 meter frequency. This means the CW op has a much greater chance of being noticed.

Oh baloney....it's not up to the ARRL to 'designate' where 6 meter ops hang out. But I do concede the point that if the league doesn't support it, it wont happen.

I think moving to 50.200 is an excellent idea. And always have. When AM was king it was 50.4. I personally think that hanging so low in the band is not a great idea.

You do know one of the reasons for this don't you? Back in the bad old days of off air TV. You needed to get as far away from channel 2 as possilbe. Now we don't have this problem, for the most part, cable and satellite have cured it for us.

Why not use this group here to 'restart' the move to 50.2??

Topic: 1483 Message: 1515

Dan,
I wasn't trying to infer that only the ARRL can designate a calling freq. Only that they are the only group with enough of a following (and a big enough mouth) to get all our ducks in a row. Moving to .200 does sound good for domestic stuff. With today's computerized scanning radios it would be no problem to add one more freq to stop at. I have seen several stations, (big guns I think) who hang on freqs like .185 or .155. Whenever the band is open, you can always find them on their favorite freq.

On the 'move to .200' idea, if you used the Internets' capabilities to lobby the ARRL and several of the VHF/UHF societies, you might get it to happen. It would take a long time though. I don't remember the last time I saw the ARRL commit any funds or new literature to 6 meters. They tend to stay with the status quo. Any thing else cuts into their budget (salaries?).

If I can help, let me know. I am currently president of PODXS, the parent org of the 070 Club, and using it to try to get more PSK31 activity going on .290. It seems to working.

73,
Jay - AA8QQ

I don't feel the urge to get into another 'p ing' contest with the league.
So I'll leave the politics to someone else...hi.

I am not running a 'state of the art' six meter station, So I can't scan.
So I park it on .125 most of the time. Works for me.

Dan
I thank a vast majority of us
sit on 50.125 and leave the rig on.
If you have squelch, so much the better.

EVERYONE, do call CQ when entering and leaving the shack each day!

Gordy Tatro N5FLV DM82 TX SMIRK #749

That's why it's called a "voluntary" bandplan, where operators follow a "gentleman's agreement". It also helps to standardize what types of emissions are done where so you know where to transmit depending on mode. Locally, we have several repeaters that operate on a 1 mhz split on 2m that fall right into the 2m simplex portion, but I guess that was coordinated...
Dan/W4NTI wrote:
Oh baloney....it's not up to the ARRL to 'designate' where 6 meter ops hang

EVERYONE, do call CQ when entering and leaving the shack each day

All my 6 meter operation is mobile (unless I carry the rig in the house for, say, a weekend.) Every time my radio makes the round thru the memories, it has stopped on 50.125 for 10 seconds. When in the car all day, I probably throw out my callsign ten times on that freq. I agree, let's all get on and see what happens!

Thats bad. Sorta like a modern day Clegg 99er with my homebrew VFO on the tx. Now that was fun. Good thing it was on AM.

Im running a relatively decent setup tho. Its a TenTec Triton IV lowband rig into a TenTec Transverter. Into a pair of 6146s homebrew amp. To my homebrew 3 element. Hey...works for me. And also allows me to play on HF at the same time with my other radio.

1529. RE: [6 Meter Sked] ATV

Yahoo group: 6meter (2000 — 2003)
Date: 2002-08-26 21:34:27 UTC
From: Noel
Topic: 1527 Message: 1529

Thanks!
That's why I picked the call. Easy to say and easy for others to
remember.

I don't do ATV, but some day I might.

My rig right now is a Yaesu VX-5R.

Its just a vanity call :P

I got sick of everyone (including my dad) mixing our two calls.
I was KB8SJT, and my dad was KB8SJU.

Now he is an Extra, with the call of N8PU

The AATV club here in phoenix has a slogan "A step above dead air" so the TVI would fit in nicely..
The club actually holds the ARRL record for the most vanity call signs.
ATV and TV add your own prefix and you have a 90% shot at hitting someone in phoenix.

Agreed....but for Sparodic E you don't even need that much of an antenna.
Just 3 elements will do the job for that mode. I've never had anything
bigger than a short spaced 4 on six and have worked anything I can hear with
never over 100 watts,

If you have the room put in a rotary beam in the attic. It was tight but I had one in Ohio back in the 70s I sat on a Radio Shack rotar. Nailed it to the floor of the attic. Stuck a hb beam on it and it worked great. And it was rotatable.

A full wave dipole .....why bother? The feed matching would be a pain and only about .5 db diff from a real dipole. Not worth the trouble.

A squalo does a respectable job.

1536. Re: [6 Meter Sked] ATV

Yahoo group: 6meter (2000 — 2003)
Date: 2002-08-27 00:02:39 UTC
From: Dan/W4NTI
Topic: 1527 Message: 1536

No way...I claim the record for longest distance TVI.

For those that want to hear it.....

It was 1967 and I received a notice from the FCC that my neighbor was complaining (again) about me interfering with their 1960 model BW TV set. That was using indoor rabit ears to receive channel 3 70 miles away.

I immediatly took this letter to my company commander and requested emergency leave to go home and handle the situation.

He read over the official letter. Stood up and looked me right in the eye.....then said......get the 'h' out of here Sergeant.

I was in BienHoa RVN at the time. 10, 376 miles away from the TV set.

1537. Re: [6 Meter Sked] Antennas

Yahoo group: 6meter (2000 — 2003)
Date: 2002-08-27 00:47:29 UTC
From: Rob
Topic: 247 Message: 1537

well right now I have an inop alliance U-100 rotor up there with a 2m 4ele beam on it.I managed to find one area that I could fit it in. The way I've been loving 6 I'm about ready to switch them and do a 6 beam.Thanks for the advice on the dipole.I tend to experiment and alot of times they fail.But I learn from them.

Subject: Re: [6 Meter Sked] Antennas

If you have the room put in a rotary beam in the attic. It was tight but I had one in Ohio back in the 70s I sat on a Radio Shack rotar. Nailed it to the floor of the attic. Stuck a hb beam on it and it worked great. And it was rotatable.

A full wave dipole .....why bother? The feed matching would be a pain and only about .5 db diff from a real dipole. Not worth the trouble.

A squalo does a respectable job.

Rob, it sounds as if you have a similar setup to mine. Due to living in an antenna restricted development, I've got a Par OmniAngle on the house (big chimney, unvented gas logs....pulled the metal top cap off, put the Par up there and did a plastic "cap"...can't really see it!) and the 432 quagi and the 2M 5 ele in the attic. I'm on a ridgeline so it works OK. I'd love a 100' tower in the back yard but it will not be anytime soon! The Par works well (same as your halo), better than the JPole I had on the back deck (birdfeeder and bird house support. They didn't mind the RF, apparently). I've got a Cushcraft 3 ele that I use portable (I monitor with a halo then turn the beam towards the station for the QSO) and it easily outperforms the halo. M2 also makes a fine beam....bandwidth is better than the Cushcraft (if the specs are correct). Look at yagis at hamfests....sometimes you can get a bargain.

As for the dipole, odd wavelengths do better than even. So, a 3 wavelength dipole would be interesting, but quite directional. I'd take the others' advise and try to find a way to stuff a beam into the attic. The Alliance is quite simple, think there are several sources online for repairing the rotators. I buy mine at Goodwill for $5 to $10, regrease them, clean out the controller and get 'em running again. I'm experimenting with a folded dipole/reflector 6M beam (to fit it into the attic...can't swing the Cushcraft) on a similar rotator hanging from the ridgeplate. If it works better than the Par, I'll post results.

Nope....at the time I was using KWM2A barefoot 100 watt SSB Collins
Transcievers on a frequency in the 7 mhz range.

I was a Forward Air Controller and we ran the network from Bien Hoa.

1541. Re: [6 Meter Sked] Antennas

Yahoo group: 6meter (2000 — 2003)
Date: 2002-08-28 03:04:29 UTC
From: Don Huntington
Topic: 247 Message: 1541

Sounds like someone forgot to use the thrust bearing. I had stacked 4 element six meter yagis and an 11 element yagi on 2 and had no problem for over 5 years, then I moved. They are cheap and take the stress off the rotor. 73, Don K1DH

In a message dated 8/26/02 8:50:06 PM, crandall@... writes:

well its really hard to use a thrust bearing with an alliance U100 rotor
its designed as a mast mounted rotor to turn small TV antennas
it does pretty good with small VHF stuff but would bust a gut trying to
turn anything bigger than a M2 6m5x which is 18 foot long but light
weight
i have the alliance HD-73 and its tower mounted and no thrust bearing
and its turning my 4 ele 6 meter quad and in the past has turned 4 11
ele 2 meter yagis and 2 4 ele 2 meter yagis
so they can take a lot if balanced right...grin

Believe it or not, the TV antenna rotor sold by Radio Shack is a good light duty rotor. I have one that has been in use for a good 4 years now, turning a 10 element 2 meter beam. It still works just fine. This rotor could probably handle up to a 4 element 6 meter beam with no problem.

-- James KF4OUI

well its really hard to use a thrust bearing with an alliance U100 rotor
its designed as a mast mounted rotor to turn small TV antennas
it does pretty good with small VHF stuff but would bust a gut trying to
turn anything bigger than a M2 6m5x which is 18 foot long but light
weight

Currently I have a 5ele 6M on the bottom, a 16ele 440 and a diamond Omni dual band on my rat shack rotor.

on the other one I used to have the 440 16ele, 440 6ele, 2m 4ele, 1.2gig 20ele and the J-Pole all on the one rotor with a 10Ft mast..

I think that was a good stress test.
the rotor is fine, the control box took a dump.

It will. I've used it to turn a 4 element six meter with ease. I now use it to turn my 3 element. No problem at all.

From: Don Huntington
Topic: 247 Message: 1546

Hi Dennis, The thrust bearing for a U-100 attaches to the mast below the rotor and the mast that goes thru the motor sits on the bearing assembly. It holds the mast with a U clamp and takes the vertical weight of the antenna away from the motor. I hope this helps. 73, Don, K1DH

1547. Antennas for attics

Yahoo group: 6meter (2000 — 2003)
Date: 2002-08-28 14:44:45 UTC
From: Tom Cox
Topic: 1547 Message: 1547

Try a reflected m beam. Mine was easy to build, weighs a couple of pounds (copper wire and PVC pipe) , and has a very small turn radius. Theoretical gain is about equal to a 2-el Yagi, but I don't have the equipment to verify that. It acts like a beam, and it works, even at about 20 ft up on a Radio Shack rotor.

Look here
http://autoinfo.smartlink.net/kq6rh/antenna/ant_magi.htm

and search on Google for "reflected m".

73,
Tom, KA5NEE/9

its probably the same gain figures cushcraft uses when they calculate
there antennas

Oh you mean like some politicians work? Wet the finger and stick it up in
the air to see which way the wind is blowing?

If a antenna is not rated in DBD I have serious problems believing ANYTHING
said about it.

Topic: 1480 Message: 1551

> I have come to the conclusion that QRP.....blows rocks on 6
meters

No it doesn't. For about 20 years, I used no more than 3 watts on 6m.
It just takes patience.

What is best is a "moderate" band opening. As the band first begins to
open, QRP generally doesn't cut it, especially with a small antenna.
As the band gets better, QRP is fine. In strong openings over a broad
area, when many stations can be heard on the band, QRP stations start
to underperform, simple because of QRM from other stations.

A good transverter or other low-power 6m rig allows a good low-cost
entry to the band and is lots of fun.

Um..... I thought the "move to .200" actually already occurred several years ago. I thought 50.200 was the calling frequency for stateside work, with 50.110 suggested for DX.

If you read the 6m FAQ, it says that, I think, but
50.125 is still used by stateside stations to call CQ
and is generally used as the calling frequency. When I
first got into 6m, I also had heard the calling
frequency was 50.200, but apparently that idea never
caught on, kinda like the metric system. If you print
out the band plan poster from Icom, you'll see they
list 50.125 as the 6m calling freq.

Perhaps the 'word' didn't make it anywhere. Everyone is still on .125

its one of those deals if it aint broke dont fix it type of thing the
band isnt open enough to make it a big deal so no one bothers with it

I don't know.... I called CQ for quite a while on .125 last night and there didn't seem to be anybody there. :)

Here is a phrase I coined a while back.

It takes two things to communicate, an operator at both ends.

1558. RE: [6 Meter Sked] 6 meters

Yahoo group: 6meter (2000 — 2003)
Date: 2002-08-29 17:18:32 UTC
From: Schachter, Abe
Topic: 1483 Message: 1558

The de facto domestic SSB calling frequency remains 50.125 despite attempts a number of years ago to move it up to 50.200. If calling CQ a number of times doesn't get the church mice out of the woodwork and the beacons (50.060 - 50.080 for unattended beacons in the USA per Part 97.203, see http://www.arrl.org/FandES/field/regulations/news/part97/c.html#203) cannot be heard then chances are that there is no propagation. That's why we call it the Magic Band - either its providing lots of exciting QSOs or its providing lots of white noise.

now dan
you know there must be 3 things when it comes to 6 meters
operator on each end and propagation so they can hear each other

From: Dennis Kaylor
Topic: 1562 Message: 1562

For Sale
Toshiba 486dx25 laptop with 28 meg of RAM and a 1.8 gig hard drive
loaded with win98 also has 2 PCMCIA slots one has a network card the
other a 33,6 modem
also has a color screen reasonably good battery
spare mouse and trackball and AC power cord and carrying case
this would be a good computer for portable packet or use as a logging
computer or use in the ham shack for ham stuff so you dont take up the
big computers time
i am asking $150
thanks
